IRON-WORT. See *Sideritis*.

IRPEX, *Fries*. From *irpex*, a rake or harrow; alluding to the hymenium, which somewhat resembles that instrument. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceae*. These species are found on Pine and Beech wood.—*lacteus*, *pendulus*.

ISACHNE, *P. Browne*. From *isos*, equal, and *achne*, a glume. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. A species of grass, of little interest, and common culture.—*australis*.

ISANTHUS, *Micheli*. From *isos*, equal, and *anthos*, a flower; in reference to the regularity of the corolla. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceae*. A somewhat interesting annual, cultivated in sandy peat, and propagated from seeds. *Synonymes*: 1, *Trichostema brachiatum*. *coeruleus* . . Blue . 7, H. A. 1 N. Amer. 1818

ISARIA, *Persoon*. From *isos*, equal; on account of the regularity of the filaments. *Linn.* 24, Or. 9, Nat. Or. *Botrytiaceae*. A white species,

found during the spring months on some species of *Trichia*—*microscopica*.

ISATIS, *Caspar Bauhin*. From *isazo*, to make equal; the plant was believed, by its simple application, to destroy all roughness of the skin. *Linn.* 15, Nat. Or. *Brassicaceae*. The species of this genus have not much beauty, and cannot be recommended except for general collections. They thrive with the commonest management, and increase from seeds. *I. alpina* may be increased by dividing the roots.

Synonymes: 1, *I. megacarpa*; 2, *I. dasycarpa*.

bannatica, *hebecarpa*, *orientalis*.

ISCHÆMUM, *Beauvois*. From *ischo*, to stop, and *haima*, blood; because of its supposed medicinal qualities. *Linn.* 23, Or. 1, Nat. Or. *Graminaceae*. Uninteresting species of the easiest culture.—*aristatum*, *australe*, *rugosum*.

ISCHÆMUM. See *Andropogon*.

ISCHÆRUM, *Blume*. See *Biarrum*.

ISÉRTIA, *Schreber*. Named after P. E. Isert, a German surgeon, in the Danish service, at Accra. *Linn.* 6, Or. 1, Nat. Or. *Cinchonaceae*. This is described as a very showy species, succeeding in sandy loam and peat, and increased by cuttings in sand under a glass in heat. *Synonymes*: 1, *Guettarda coccinea*. *coccinea* 1 . . Scarlet 7, S. Ev. S. 10 Guinea . . 1820

ISÍDIUM, *Acharius*. From *isos*, equal; because of the small difference that exists between the podetia. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceae*. Small species, found most plentiful in autumn and winter on rocks and trunks of old trees. *I. Westringii* is used in dyeing—*album*, *coccodes*, *corallinum*, *microsticticum*, *paradozum*, *phymatodes*, *phragmadium*, *Westringii*.

ISKUL. See *Scilla indica*.

ISLE OF FRANCE CINNAMON. See *Oreodaphne cupularis*.

ISMÉLIA, *Cassini*. Origin of name unknown. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. *I. maderensis* is an elegant little shrub, from one to two feet high, succeeding best in a light sandy soil, and increased both by cuttings and seeds. *Synonymes*: 1, *Chrysanthemum pinnatifidum*, *C. Broussonétia*, *Pyræthrum Broussonétia*.

Broussonétia 1 Wht. pur. 5, G. Ev. S. 2 Canaries 1857
maderensis . . Straw . 5, F. Ev. S. 2 Madeira 1832

ISMÈNE, *Herbert*. Ismene the daughter of *Edipus* and *Jocasta*. *Linn.* 6, Or. 1, Nat. Or. *Amoryllidaceae*. These species are all beautiful, and worthy of extensive cultivation; for which, see *Amargillis*. *Synonymes*: 1, *Pan-*

cratium Amáncaes; 2, *P. ealathinum*. See *Hymenocallis*.

ISOCHROMA, *Benth.* From *isos*, equal, and *chrome*, colour. All the species known have the same coloured flowers. *Linn.* 5, Or. 1, Nat. Or. *Solanææ*. The only species introduced is a handsome shrub, which grows freely out of doors in summer, but requires shelter in winter. Early in spring before the buds put out it should be pruned back freely, and it will then flower profusely. It readily strikes from cuttings planted in sandy soil under a glass. *Synonyme*: 1, *Habrothamnus cyanæus*.

<i>tubulosa</i> 1	. Grn. vio.	7, F. De. S. 6	Loxa	. 1843

IVIRA. See *Sterculia Ivira*.

IVORY PALM. See *Phytélephas macrocarpa*.

IVY. See *Hedera*.

IVY GUM is obtained from the old stems of *Hedera Helix*.

IXERIS, *De Candolle*. Name not explained. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Obscure plants, of the easiest culture. *Synonymes*: 1, *Lagöseris versicolor*, *Barkhausia versicolor*—*versicolor* 1.

IXIA, *Linn.* *Ixia*, bird-lime; because of the viscid nature of some of the species. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. A genus of very handsome plants when in flower. We recommend them to be grown in a mixture of sandy loam and decayed leaves, or peat soil. When they have done flowering, they require no water till they begin to grow afresh. In October, they should be fresh potted, and set in a cool frame, as they only require to be protected from frost till their pots are well filled with roots; then they may be set on the shelves of the greenhouse, and watered regularly, and they will flower well. The species of this

genus, and some other bulbous-rooted genera, succeed best in a pit, covered with lights in very cold or wet weather. Most of the species will grow well in a south border, in the open air, planted from five to six inches deep, in a light sandy soil, near a wall, and to be covered with dry litter in severe weather; they will then flower much stronger than if grown in pots, and they may be increased by offsets from the bulbs, or by seeds. See *Babiàna*, *Hesperántha*, *Sparáxis*, *Synnötia*, and *Trichonema*.

IXIOLIRION, *Herbert*. From *ixia*, bird-lime, and *leirion*, a lily. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. A genus of fine hardy bulbous plants, which will flourish in ordinary garden soil. Their increase is effected by seeds or offsets of the bulbs. *Synonymes*: 1, *Amáryllis montàna*, *A. tartàrica*; 2, *I. Ledibouria*.

IXODIA, *R. Brown*. From *ixodes*, viscid; in allusion to the nature of the plants. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. This is a pretty shrub, and may be successfully grown in a mixture of peat and sand, and propagated from cuttings of the young wood in sand, under a glass.

achilleoides . . White . 6, G. Ev. S. 2 N. Hol. . 1803

IXORA, *Linn.* After Iswara, a Malabar deity, to which the flowers of some are offered. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. A beautiful genus of East Indian shrubs, easily cultivated in our stoves. They require a sandy open soil, composed of loam and peat, in which they grow well, provided they are kept clear of insects, which is easily effected by well washing the whole plant with a good syringe while growing. They propagate from cuttings in sand, or sandy soil, under a glass, in heat. *Synonymes*: 1, *I. Pavetta*; 2, *I. alba*; 3, *I. parviflora*; 4, *I. longifolia*; 5, *I.*

coccinea, *I. flammæa*; 6, *Pavetta gracilis*. See *Chomelia*, *Pavetta*, and *Tetramerium*.

JACQUÍNIA, *Linn.* In honour of the celebrated botanist, N. J. Von Jacquin, professor at Vienna. *Linn.* 5, Or. 1, Nat. Or. *Myrsinaceæ*. A genus of very desirable plants, on account of the beauty of their flowers. They are of easy culture in a mixture of sand and peat. It is thought that watering these plants occasionally with salted water, has a tendency to make them grow and flower more freely. Cuttings will root in sand, under a glass, in heat; but they are by no means easy of propagation.

JASMINACEÆ, or JASMIN-WORTS. These are general favourites on account of the delicious fragrance emitted by the flowers of several of the species, from which an essential oil is obtained. Most of the kinds are natives of the tropics.

JASMINE. See *Jasminum*.

JASMINUM. Linnæus derives the name from *ia*, a violet, and *osme*, smell; some assert that it is from *ysmyn*, the Arabic name of the plant. *Linn.* 2, Or. 1, Nat. Or. *Jasminacæ*. The species of this very elegant genus are familiar to every one. The stove and greenhouse kinds thrive well in a mixture of sand, loam, and peat; and cuttings of the ripened wood root freely in soil or sand, under a glass, in heat. The hardy kinds thrive well in any common soil, and are easily increased by cuttings planted under a glass. They are remarkably well adapted for training over an arbour, or against a wall, or trellis-work. The genuine oil of Jasmine of the shops is the produce of *J. grandiflorum* and *officinale*; but a similar perfume is obtained from *J. Sambac*. *Synonymes*: 1, *J. Wallichianum*; 2, *J. flexile*.

JATAMANSE, or ANCIENT SPIKENARD. See *Nardostachys Jatamansi*.

JĀTROPHĀ, *Linn.* From *iatros*, physician, and *trophē*, food; in allusion to the medicinal properties of the plants. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. The species of this genus are only valuable in a medicinal point of view. They thrive well in sandy loam and peat, in small pots, with little water. Most of the species ripen seed freely if care be taken to fertilise the stigmas with the pollen. Cuttings root very readily stuck in the tan, in strong heat. The seeds of *J. Oúrcas* are purgative and emetic; an oil is obtained from them, which is a valuable external application in itch. See *Janípha* and *Siphònia*.

JŌHNIA. Named by Roxburgh, in honour of the Rev. Dr. John, a missionary, once resident in Tranquebar. *Lin.* 3, Or. 1, Nat. Or. *Hippocrateaceæ*. Very handsome shrubs, producing edible fruit. They do well in loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in a moist heat.

JOHNSONIA, R. Br. See Xanthorrhæa.

JOINER'S PLANE WOOD, is the *Magnolia glauca*.

JOINT FIRS. See *Gnetaceæ*.

JOINTED FERNS. See *Equisetaceæ*.

JOINTS, the places at which the pieces of the stem are articulated with each other.

JOLIFFIA. Named by Bojer, in compliment to his friend M. Jolliffe. *Linn.* 22, Or. 13, Nat. Or. *Cucurbitaceæ*. These are splendid plants, producing their curious and beautiful flowers in great profusion; but require a large space to grow in, and to be frequently pruned before flowering. They grow well in sandy loam and a little peat. It is much better to raise them from cuttings of the flowering shoots, as they will bloom much earlier; they will root without difficulty in soil or sand, under a glass, in heat. *Synonyme* : 1, *Telfairia peltata*, *Feuillea peltata*; 2, *Ampelocycos scandens*, *Joliffia africana*.

JPU, or UPAS TREE, is the *Antiaris toxicaria*.

JUANULLA, Ruiz and Pavon. In compliment to Don George Juan, and Don Antonio Ulloa, two distinguished Spaniards, who were sent to South America, with Condamine, to measure the meridian. Linn. 5, Or. 1, Nat. Or. *Solanaceæ*. This is a very curious parasitical genus, bearing showy tubular orange-coloured flowers. Notwithstanding its parasitic nature, it will flourish in a pot filled with turfy peat soil, and kept in a moist stove; it does not grow fast, but is readily increased by cuttings planted in sand, under a glass in heat. *Synonymes*: 1, *Ulloa parasitica*, *Brugmansia parviflora*, B. *floribunda*; 2, B. *eximia*.

JUNGERMANNIA, Nees. In honour of the German botanist, Louis Jungermann, who died in 1653. Linn. 24, Or. 6, Nat. Or. *Jungermanniaceæ*. This is a very extensive genus of obscure plants, found at all seasons of the year, and generally in little patches, formed by their creeping stems, upon trees, or rocks, or on the earth in damp places. *Synonymes*: 1, *Jungermannia epiphylla furcigera*; 2, *J. endiviefolia*; 3, *J. affinis*—albescens, albicans, anomala, asplenoides, barbata, barbata minor, bicuspidata, bidentata, Blasia, byssacea, calycina 1, calyptrifolia, capitata, ciliaris, cochleariformis, complanata, compressa, concinnata, connivens, cordifolia, crenulata, cuneifolia, curvifolia, decipiens, Dicksoni, dilatata, Doniana, emarginata, epiphylla, epiphylla longifolia 2, excisa, exsecta, Francisci, furcata, hamatifolia, hamatifolia echinata, hamatifolia exstipulata, heterophylla, hibernica, Hookeri, Hutchinsiae, hyalina, incisa, inflata, inulacea, juniperina, lævigata, lanceolata, laxifolia, Mackaii, microscopica, minuta, minutissima, multifida, nemorosa, obtusata, obtusifolia, orcadensis, pinguis, planifolia, platyphylla, platyphylla lina, platyphylla major, polyanthos, pubescens, pumila, pusilla, Ralfsii, reptans, reptans bipinnata, resupinatus, scalaris, serpyllifolia, setacea, setiformis, setiformis Britanica, sphaerocarpa, Sphagni, spinulosa, stipulacea, Tamarisci, Tamarisci apiculata, Taylori, tomentella, Trichomanis, trichophylla, trilo-

bàta, turbinàta 3, Turnèri, umbròsa, undulàta, ventricòsa, viticulòsa, Woodsii.

JUNGERMANNIACEÆ, or SCALE-MOSSES. These consist of small moss-like plants, closely approaching Liver-worts (*Marchantiaceæ*), from which they have only been recently divided. They are found in damp shady places in all parts of the world.

JUNGA, De Candolle. See *Dumerilii*.

JUNGLE BENDY. See *Tetrámeles*.

JUNIPER. See *Juniperus*.

JUNIPERUS, Linn. Derived from the Celtic, *juniperus*, rough or rude; in allusion to the stiff habit of the shrubs. *Linn.* 22, Or. 13, Nat. Or. *Pinaceæ*. This genus is too well known to need to be particularised here. All the species will grow in sandy loam, and some in any common garden soil, as *J. Sabina*. They are mostly raised from seeds, though cuttings will strike when planted in a sheltered situation, under a hand-glass. The stimulating and diuretic powers of the Savin (*J. Sabina*) are well known. The berries of *J. communis* are well known for the flavour they give to gin. *Synonymes*: 1, *J. canadensis*; 2, *J. nana*; 3, *J. sulcica*; 4, *J. alpina*; 5, *J. prostrata*; 8, *J. repens*; 6, *J. tamariscifolia*; 7, *J. caroliniana*; 9, *J. vulgaris fruticosa*, *J. communis erecta*; 9, *J. lusitanica*; 10, *Libocedrus tetragona*. See *Dacrydium*, *Frenela*, *Libocedrus*, and *Widdringtonia*.

JUSTICIA, Linn. In honour of J. Justice, an eminent Scotch horticulturist and botanist. *Linn.* 2, Or. 1, Nat. Or. *Acanthaceæ*. An extensive, highly interesting, and ornamental genus of plants, which mostly flower very freely. The stove and greenhouse shrubby and herbaceous kinds grow well in any light soil, or loam and peat mixed, and may be multiplied by cuttings in sand, under a glass, the stove kinds in heat. The seeds of the annual and biennial kinds must be raised in pots, in a hothouse, or hotbed frame, and when transplanted, treated as other tender annuals and biennials. The flowers, leaves, and roots of *J. Adhåtoda* are said to possess antispasmodic qualities. *J. Ecbolium* is supposed to be diuretic. *J. paniculata* is the base of the French bitter tincture called *Droge Amère*, which is highly valued for its stomachic and tonic properties. *Synonymes*: 1, *J. quadrangulàris*; 2, *J. flavicoma*; 3, *Eustachiana*; 4, *oblongata*; 5, *tinctoria*; 6, *Harráchia macrothýrsus*, *Strobilorachis glabra*, *S. prismatica*. See *Agalmýla*, *Aphelandra*, *Asystasia*, *Barlèria*, *Cyr-tánthus*, *Elytrària*, *Eránthemum*, *Phlogacínthus*, and *Strobilorachis*.

KAIL, or WINTER GREENS. See *Brassica*.

KAKATENO. See *Dacrydium taxifolium*.

KAKI, or JAPAN MEDLAR. See *Diospyros Kaki*.

KÁKI-KÁTEA is the *Dacrydium excelsum*.

KALADANA. See *Pharbitis carulea*.

KALAF WATER is prepared from the catkins of *Salvia aegyptiaca*.

KALA-KANGNEE, or KORAKANG. See *Setaria italica*.

KALANCHØE, Adanson. The Chinese name of one of the species. *Linn.* 8, Or. 4, Nat. Or. *Crassulaceæ*. This is a pretty genus of succulent plants, requiring but little water when not in a free-growing state. They appear to do best in a mixture of loam and sand. They are very easily increased by cuttings, which should be taken off, and laid to dry for a short time before planting; they will then root in a few days. *Synonymes* 1, *Verea acutiflora*; 2, *V. crenata*; 3, *Crassula rotundifolia*.

acutiflora 1	White 3,	S. Ev.	S. 2	E. Ind.	1806

KALI, or SALT-WORT. See *Salsóla Káli*.

KÁLIFORM, formed like *Salsóla Káli*, a sea-coast plant.

KÁLMIA, Linn. In honour of Peter Kalm, professor at Abo, in Sweden, and author of Travels

in America, 1753. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. The plants of this genus rank among the most handsome of our hardy shrubs. They do best when grown in a peat soil, though they will grow in a very sandy loam; they may be increased by layers or seeds, and when raised from the latter, they require the same treatment as that recommended for *Rhododendron*.

KILLINGA. See *Kyllinga*.

KINA-KINA, or **QUININE**, is the bark of several species of *Cinchona*.

KINGIA. After Capt. Philip King, a naval officer employed on the coast of New Holland. *Linn.* 6, Or. 1, Nat. Or. *Juncaceæ*. Pot in any light rich soil, and keep in an airy part of the greenhouse.

australis . . . Yel. . 4, G. Ev. S. 1½ Australia 1830

KING'S CUPS, or **BUTTERCUPS.** See *Ranunculus bulbosus* and *acris*.

KINO AFRICAN. See *Pterocarpus erinaceus*.

KINO EAST INDIAN. See *Pterocarpus marsipium*.

KIRGANELIA, *Jussieu*. From *Kirganeli*, the name of the plant in Malabar. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. This plant will grow well in a mixture of loam and peat; and ripened cuttings will root in sand, under a glass, in a moist bottom heat. *Synonyme*: 1, *Phyllanthus kirganelia*.

elegans . . . White . 7, S. Ev. S. 6 Maurit. . . 1820

KIRSCHENWASSER is prepared from the fruit of *Cerasus avium*.

KISSI. See *Camellia Kissi*.

KISSING COMFITS OF FALSTAFF are the candied roots of *Eryngium maritimum*.

KITAIBELIA, *Willdenow*. In honour of Paul Kitaibel, M.D., professor of botany at Pesth, in Hungary. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. A tall, mallow-like, herbaceous plant, succeeding in any common soil, and easily increased by seeds, which it ripens in abundance.

vitifolia . . . White . 8, H. Her. P. 5 Hungary 1808

KITAP OF CHINA is the *Sida hispida*.

KLEINHÖVIA, *Linn.* In honour of M. Kleinhoff, formerly director of the botanic garden in Java. *Linn.* 16, Or. 7, Nat. Or. *Byttneriaceæ*. A handsome species, flowering throughout the year, and seldom being without fruit, which is, however, of little value. It succeeds

well in peat and loam; and cuttings root in sand, under a glass, in heat.

hospita . . . Pink . all S. Ev. T. 20 Moluccæ . 1800.

KLENIA. Named by Linnæus, in honour of James Henry Klein, a German botanist. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. The species of this genus are of very little interest, and of the simplest culture and propagation. See *Cacalia* and *Kuhnia*.

viridiflora . . . Green . 7, S. Ev. S. 4 Mexico . 1823
colorata, *Porophyllum*, *ruderalis*, *suffruticosa*, *tagetoides*.

KLÜGIA, *Schlecht.* In honour of Dr. William Klug, a lover of botany. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceæ*. A small genus divided from *Wulfenia*. The species thrive in a mixture of equal parts of sandy loam and peat, and require plenty of moisture when in a state of growth. Increase is by cuttings. *Synonymes*: 1, *Wulfenia Notoniæna*, *Glossanthus Notoniæna*, *G. malabarica*.

Notoniæna 1 . . . Blue . all S. Ev. P. 1 E. Ind. . 1843

KNÄPPIA, *Smith.* In compliment to Mr. M. Knapp, a writer on British grasses. *Linn.* 3, Or. 2, Nat. Or. *Gramineæ*. This is one of the least of the British grasses, and merely requires sowing in any common soil.

agrostidea . . . Apetal 7, H. Grass. 4 Wales, sa. pl.

KÆLPÍNIA. See *Lapsana*.

KÉNIGIA. *Linnæus* named this genus after Samuel Kœnig, a Swiss mathematician. *Linn.* 2, Or. 3, Nat. Or. *Polygonaceae*. This is a

curious inconspicuous species, of greater rarity than beauty; it will grow sown in any common soil in the open border.

islandica . . . Apetal 4, H. A. ½ Iceland . 1773

KOHATIA, *De Candolle*. In memory of Francis Kohaut, a botanical collector. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceae*. Not worthy of cultivation. For culture, see *Oldenlandia*. *Synonymes*: 1, *Hedyotis gracilis*, *H. fusca*.
gracilis 1 . . . White 6, S. A. 1 Nepaul . . 1828

KOHL RABI, or TURNIP-STEMMED CABBAGE. See *Brassica*.

KOLA NUTS. See *Sterculia acuminata* and *tomentosa*.

KÓLBEA. See *Melanthium*.

KOLEHO FRUIT. See *Saurauja*.

KOLREUTERIA, *Linn.* In honour of the celebrated German botanist, J. G. Kolreuter. *Linn.* 8, Or. 1, Nat. Or. *Sapindaceae*. This is a very handsome plant, growing well in any common soil; it should be planted in a sheltered situation, as it will not flower if too much exposed; it is readily increased by layers or cuttings of the roots.

paniculata . . . Yel. 7, H. De. T. 10 China . . 1763

KO-NA, or AFRICAN ARROW POISON. See *Echites africana*.

KÓNIGA, *R. Brown*. In honour of Charles Konig, F.R.S., L.S., superintendent of the natural history department in the British Museum. *Linn.* 15, Nat. Or. *Brassicaceae*. *K. maritima variegata* is a pretty little under-shrub; it grows in any common soil, and may be increased by cuttings planted under a glass. *K. maritima* is increased from seed sown in the open border. *Synonymes*: 1, *Algisum maritimum*, *Adysetum maritimum*, *Glyce maritima*.

maritima . . . White 7, H. A. ½ Eng., sea co.
variegata . . . White 7, G. Ev. S. ½ Gardens.

KOOCHLA, or POISON NUT. See *Strigchnos Nux Vomica*.

KOPEH, or TARA ROOTS. See *Colocasia macrorrhiza*.

KÓPSIA, *Blume*. Named after Professor Kops, the author of a botanical dictionary of reputation. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceae*. A genus bearing flowers not unlike the stove species of *Vinca*; very ornamental, and produced several times in the year. It grows freely in a mixture of heath mould and light sandy soil, and is propagated by cuttings. *Synonymes*: 1, *Cérbera fruticosa*.
fruticosa . . . Red . 5, S. Ev. S. 4 Pegu . . 1818

KOSHEL, or GINGER-GRASS. See *Anathærium nardus*.

KOUMÉ. See *Ampelocycos scandens*.

KOWAIN GUTUKAKA. See *Clianthus puniceus*.

KRAMERIA, *Læsting*. In honour of J. G. H. and W. H. Kramer, two German botanists. *Linn.* 14, Or. 2, Nat. Or. *Polygalaceae*. This is an ornamental shrub, succeeding in sandy loam and peat; cuttings will root in sand, under a glass, in heat. The species is tonic, and excessively astringent.

pauciflora . . . White 6, S. Ev. S. 4 Mexico . 1824

KREYSIGIA, *Reichenbach*. Named after F. L. Kreyzig, a German botanist, author of a treatise on the comparison of animal and vegetable life. *Linn.* 6, Or. 1, Nat. Or. *Melanthaceæ*. A pretty half-hardy herbaceous plant, bearing delicate rose-coloured flowers. It will grow in any light soil, and is increased by division.

multiflora . . . Rose . 6, G. Her. P. N. S. W. 1823

KRIGIA, *Schreber*. In honour of Mr. David Kreig, a German botanist. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *K. virginica* is rather a pretty little grassy-leaved annual; it, as well as *K. caroliniana*, has only to be sown in spring, in any open loamy soil. The other species will grow well in the same kind of soil, and may be increased by divisions. *Synonymes*: 1, *Tróximum virginicum*; 2, *Hyóseris caroliniana*; 3, *Tróximum Dandelion*; 4, *Hyóseris virginica*.

virginica 4 . . . Yellow 6, H. A. $\frac{3}{4}$ N. Amer. 1811
amplexicaulis 1, *caroliniana* 2, *Dandelion* 3.

KRUBERA, *Hoffmann*. After John Julius Kruber, M.D., a promoter of botany. *Linn.* 5, Or. 1, Nat. Or. *Apiaceæ*. The seed of this species only requires sowing in a light soil in the open border, in spring. *Synonyme*: 1, *Ulospérmum dichotomum*.

leptophylla . . . White 6, H. A. S. Eur. 1596

KRUBUT. See *Rafflesia Arnoldi*.

KUCHOO, or **GAGLEE**. See *Arum maculatum*.

KÜHNIA, *Linn.* In honour of Adam Kuhn, of Pennsylvania, a pupil of Linnæus. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Ornamental little plants, succeeding well in a mixture of peat

and sandy loam, and increased by divisions. *Synonymes*: 1, *Crilónia Kuhnia*; 2, *C. eupatorioides*; 3, *Kleinia linearifolia*, *Jasmea linearis*.

Crilónia 1 . . . White 7, H. Her. P. $\frac{1}{4}$ N. Amer. 1816
eupatorioides 2 . . . White 7, H. Her. P. $\frac{1}{4}$ N. Amer. 1812

KULIT, or **CLOVE CINNAMON**. See *Cinnamó-mum Cutiláwan*.

KUM QUAT. See *Citrus japonica*.

KUNDA OIL TREE. See *Carapa guineensis*.

KÚNTHIA. Humboldt named this genus in honour of his friend Charles Sigismund Kunth, a famous Prussian botanist. *Linn.* 21, Or. 6, Nat. Or. *Palmaceæ*. This is described as an ornamental palm, growing in any rich mould, and increased only by seeds.

montana . . . Straw . 4, S. Palm. 10 N. Grenada . 1820

KUTULEGEE. See *Cedrela*.

KÝDIA, *Roxburgh*. In honour of Colonel Robert Kyd, the first director of the Calcutta botanic garden. *Linn.* 16, Or. 7, Nat. Or. *Byttneriaceæ*. An ornamental genus, succeeding well in light turfy loam and peat, well mixed; and increased by cuttings, not too ripe, planted in sand, under a glass, on a bottom heat.

calycina . . . White 5, S. Ev. S. 25 E. Ind. . 1818
fratérna . . . White 5, S. Ev. S. 20 E. Ind. . 1823

KYLLÍNGIA, *Linn.* In honour of P. Kylling, a Danish botanist, who died in 1696. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceæ*. Mere weeds, of the simplest culture—*brevifolia*, *cruciformis*, *intermedia*, *monocéphala*, *odorata*, *polycéphala*, *triceps*, *uncinata*.

L.

LABARIA plant of Demarara. See *Dracontium polyphyllum*.

LABDANUM. See *Cistus Ladaniferus* and *ereticus*.

LABÉLLUM, the front segment of an orchidaceous or other flower, the lower petal, the lip.

LABIATE, having a lip, or lips.

LABIATÆ. An extensive and very natural group of plants, so named by Jussieu and others from the ordinary form of the corollæ. See *Lamiaceæ*.

LABICHÈA, *Guadichaud*. In memory of M. Labiche, an officer in the French ship *Uranie*, who accompanied Freycinet in his voyage round the world; he died on his passage to the Moluccas. *Linn.* 2, Or. 1, Nat. Or. *Fabaceæ*. These shrubs will thrive in a mixture of loam and peat, and cuttings will root if planted in a pot of sand, with a glass placed over them.

bipunctata . . . Yel. 4, G. Ev. S. 4 Swan R. . 1843
diversifolia . . . Yel. 3, G. Ev. S. 3 Swan R. . 1842
lanceolata . . . Yel. 4, G. Ev. S. 4 Swan R. . 1837

LABIOSA, large, or broad-lipped.

LABÍŖIA, *Lindley*. From *labris*, a spoon, in allusion to the divisions of the corolla resembling the bowl of a small spoon. *Linn.* 5, Or. 1,

Nat. Or. *Myrsinaceæ*. A stove shrub of little beauty, requiring to be grown in bottom heat, of very slow growth, and the roots must not be disturbed during their period of activity. In winter little water is required. It is increased by seeds.

pothoina . . . White . 6, S. Ev. S. 3 China . 1844

LABIUM, a lip.

LABLAE, *Adan.* See *Lablavia*.

LABLÁVIA, *Adanson*. *Lablab* is the Arabic name of *Convolvulus*, with which this has no affinity except in the twining habit. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The seeds of the annual kinds may be sown in pots, and kept in the hothouse until May, when, if the weather is fine, they may be planted in a sheltered situation in the open ground, and supported in the same way as scarlet-runners. The greenhouse species are readily increased by cuttings. *Synonymes*: 1, *Dolichos cultratus*; 2, *D. albus*; 3, *D. Bengalensis*, *Lablab bengalensis*; 4, *L. purpureus*, *D. purpureus*; 5, *D. Lablab*.

LABRADOR TEA. See *Ledum*.

LABRÚSCA. See *Vitis Labrusca*.

LABURNUM. See *Cytisus Laburnum*.

LAC, or EAST INDIAN KINO is procured from insects which abound on *Butea frondosa* and *superba*.

LACÆNA, *Lindley*. This was one of the names of Helen, and may be applied to this plant on account of its beauty; but it may also be derived from *lakis*, a cleft, in allusion to the divisions of the lip. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A fine plant, bearing a strong likeness to the pendulous *Peristèreæ*: it should receive similar treatment to *Stanhopea*.

bicolor . . Grnsh. yel. 5, S. Epi. 1½ Guatemala 1843

LACATHÆA. See *Gordonia*.

LACE-BARK TREE. See *Lagetta lintearia*.

LACEPÉDIA, *H. B. and K.* In honour of Count Lacepede, the distinguished naturalist. *Linn.* 5, Or. 1, Nat. Or. *Hippocrateæ*. A handsome tree, with fragrant flowers, growing in any light soil, and easily increased by cuttings. *Synonymes*: 1, *Triceratium tinifolia*, *Triceros calapensis*.

insignis . . White . 5, S. Ev. S. 20 Mexico . 1847

LACERATE, } torn, appearing torn.
 LACERATED, }

LACERATELY-TOOTHED, toothed in a coarse irregular manner.

LACHENALIA, *Jacquin*. In honour of W. de la Chenal, a botanical author. *Linn.* 6, Or. 2, Nat. Or. *Liliaceæ*. This is a genus of pretty, though rather diminutive plants, seldom attaining a foot in height. They bear flowers remarkably well, and may be made to flower at almost any season. The soil best adapted to the growth of these plants is a mixture of peat and sand. Care must be taken to give them little or no water when not in a growing state. They may be increased by offsets or by seeds. See *Drimia* and *Zuccagnia*.

LACHNANTHES, *Ellis*. From *lachne*, wool, and *anthos*, a flower; in allusion to the flowers, which are woolly. *Linn.* 3, Or. 1, Nat. Or. *Hemodorææ*. A pretty plant; for culture and propagation, see *Dilatris*. *Synonyme*: 1, *Dilatris tinctoria*, *D. Heritiera*.

tinctoria 1 . . Pink 7, G. Her. P. 1½ N. Amer. 1812

LACHRYMA, weeping, drooping.

LACINIATE, jagged, cut.

LACISTEMÆÆ, or LACISTEMADS. A small order of dwarf trees and shrubs, natives of low damp places in the woods of tropical America.

LACISTEMA, *Swartz*. See *Nematospermum*.

LACTUCA, *Linn.* Derived from *lac*, milk; on account of the milky juice which exudes from the plants when broken. *Linn.* 19, Or. 1, Nat. Or. *Asterææ*. Among others, this genus contains the well-known "Lettuce," with the culture of which every one is familiar. *L. viridis* yields an extract resembling opium in its qualities, but less likely to produce the consequences attending the use of that drug. *Synonyme*: 1, *sonchoides*.

LADIES' TRACES. See *Spiranthes*.

LADY FERN. See *Aspidium Thelypteris*.

LÆLIA. Named by Lindley, who does not give the derivation. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These are splendid plants, approaching in beauty to some of the finer *Cattleyas*. The sepals and petals of *L. anceps*, and its variety, are pale lilac; the central lobe of the labellum is a beautiful deep purple, and the mouth of the tubular part yellow and white. *L. grandiflora* bears fine showy yellow flowers, but is found rather difficult to grow. All the other species are of easy cultivation, requiring precisely the same treatment as their rivals, the *Cattleyas*. *Synonymes*: 1, *L. caulescens*; 2, *Grahamei*; 3, *Cattleya Perrinii*, *caulescens*.

Forstieri . . . Yel. pur. 5, G. Her. P. 2 New Zea. 1837

LAGERSTRÆMIA, *Linn.* In honour of Magnus Lagerström, of Gottenburgh. *Linn.* 23, Or. 1, Nat. Or. *Lythraceæ*. A most splendid genus of plants, especially *L. reginae*, the flowers of which are produced in panicles; they are at first pale rose-coloured, and gradually deepen to a beautiful purple. The soil best adapted to these plants is a mixture of peat and loam. All the species, except *L. indica* and its variety, are rather difficult to cultivate; they require a strong heat, and very little water in winter. In summer, they grow freely, and require plenty of room to grow, with a good supply of water; cuttings root readily in sand, under a glass, in heat.

elegans	. . . Lilac	. 6, S. De. S. 10	E. Ind. . . 1841

LAGETTA, *Jussieu*. *Lagetto* is the name of the species in Jamaica. *Linn.* 8, Or. 1, Nat. Or. *Thymelæceæ*. This species grows well in loam and peat; and cuttings of the ripened wood root readily in sand, under a glass, in heat. *Synonyme*: 1, *Daphne Lagetta*.

lutearia . . . White . 6, S. Ev. S. 6 Jamaica . . 1793

LAGOECIA, *Linn.* From *lagos*, a hare, and *oikos*, a house; the seeds enveloped in the hairy involucre have been compared to young leverets. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. The seeds of this plant should be sown soon after they are ripe, in autumn, because if deferred till spring, they commonly remain a year, and sometimes longer, before they grow.

cuminoides . Grn. wht. 6, H. A. 1 Levant 1640

LAGONYCHIMUM, *Bieberstein*. From *lagos*, a hare, and *onychion*, a little nail; in allusion to the spines on the plant. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. This plant will succeed in a warm situation in the open border, if protected by a mat in severe weather in winter. It may be increased either by seeds, layers, or cuttings, taken off at a joint when very young, and planted in sand, under a glass. *Synonymes*: 1, *Acacia Stephaniana*, *Mimosa micrantha*.

Stephanianum . Yel. . 7, F. De. S. 10 Persia . . 1816

LAGOPUS. See *Ochroma Lagopus*.

LAGOPUS, resembling the foot of a hare.

LAGOSERIS, *Bieberstein*. From *lagos*, a hare, and *seris*, succory. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Obscure plants, of the simplest culture. *Synonyme*: 1, *Crœpis nemausensis*.

See *Borkhausia* and *Crêpis*—*nemausensis* 1, *taurica*.

LAGUNÆA, *Cavanilles*. In honour of Andreas Laguna, a Spanish physician and botanist of the sixteenth century. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. Annuals of no interest; they will grow in any light loamy soil. *Synonymes*: 1, *L. angulata*. See *Amiröla* and *Hibiscus*—*lobata*, *sinuata* 1.

LAGUNÄRIA, *Endl.* So called from the resemblance of this genus to *Lagunæa*. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. Handsome conservatory shrubs, growing in a mixture of sand and light loam, and increased by cuttings planted in pots of sand, and placed in heat, under a glass. *Synonymes*: 1, *Hibiscus lilacinus*; 2, *H. Patersonii*, *Fugösia lilacinus*.

LALO is the dried and powdered leaves of *Adansonia digitata*.

LAMÄRKIA. See *Elæodendron australe*.

LAMBËRTIA. Named by Smith, in honour of Aylmer Bourke Lambert, Esq., F.R.S., V.P. L.S., one of the most liberal botanists in

Europe, and the possessor of a splendid herbarium, open to every man of science. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. Very handsome plants, succeeding well in loam and peat, with the pots carefully drained. Water must, at all seasons, be very cautiously supplied; for if once the soil in the pots gets saturated, the plants will soon become sickly, and perish. Cuttings taken off at a joint, before they begin to push, will root in sand, under a glass, if secured from damp.

LAMB'S LETTUCE. See *Valerianella*.

LAMELLATE, } divided internally by little
LAMELLATED, } plates.

LAMELLOSE, having little plates.

LAMIACEÆ, or **LABIATES**. An extensive order of useful plants, natives principally of temperate climates. Nearly all have an aromatic and fragrant oil, invariably free from any noxious property. Many are useful in medicine; some are celebrated for their aromatic qualities, and others, as mint, sage, &c., are used in cookery.

LAMINA, applied to the blade of the leaf considered without the petiole.

LAMINÄRIA, *Lamour*. Named because of the flat blade-like form of the fronds. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. Interesting species of sea-weed. In Iceland, an extract is obtained from *L. saccharina*, which is used by the poorer inhabitants as a substitute for sugar—*agårum*, *bulbosa*, *debilis*, *digitata*, *esculenta*, *latifolia*, *Phyllitis*, *saccharina*, *s. bullata*.

LÄMIUM, *Linn.* Derived from *lamios*, the throat; on account of the form of the flowers. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Plants of very little merit, if we except *L. Orvula*. They will grow in any common soil, and are increased by divisions and seeds. *Synonymes*: 1, *Lamium maculatum*; 2, *L. maculatum album*.

longiflora . . . Yel. 4, S. Ev. S. 1 Sierra Leone.

parviflora . . . Yel. 4, S. Ev. S. 1 Africa . . . 1844

LANTANA. An ancient name of *Viburnum*, and applied to this genus by Linnaeus because of its affinity. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. These plants are rapid growers, forming small bushy shrubs, and producing their pink, yellow, orange, or changeable-coloured heads of flowers in great abundance, which have a somewhat agreeable aromatic perfume. Any loamy soil suits them; and they are increased readily by cuttings in sand, in heat. *Synonyme*: 1, *parvifolia*.

LANUGINÓSUS, woolly.

LAPAGERIA, *Ruiz* and *Pavon*. Named after Josephine Lapagerie, wife of Napoleon I. A most beautiful twining genus, bearing abundance of large rosé-coloured flowers. *Linn.* 6, Or. 1, Nat. Or. *Philesiaceæ*. It thrives in a light soil composed of leaf mould, peat, and sand, and is increased by division and cuttings.

rosea . . . Rose 5, G. Tw. P. 10 Chiloe . . . 1847

albiflora . . . White 5, G. Tw. P. 10 Chiloe . . . 1855

LAPEYROUSIA, *Ker*. Named in honour of La Peyrouse, the French navigator. See *Peyrouisia*.

LAPLACEA, *Humboldt*. In compliment to the

distinguished philosopher and mathematician Laplace. *Linn.* 13, Or. 1, Nat. Or. *Ternstroemiaceæ*. A very pretty stove plant, which flowers freely in our stoves when of small size, although said to be a tree of 30 or 40 feet in Brazil. It thrives in a mixture of peat, loam, and sand, and is propagated by half-ripened cuttings planted under a hand-glass, in heat. *Synonyme*: 1, *Hæmôcharis semiserrata*.

semiserrata . . . White 9, S. Ev. T. 35 Brazil . . . 1842

LÁPPA, *Tournefort*. See *Arctium*.

LAPPAGO, *Schreber*. From *lappa*, burdock; because of its rough prickly flowers. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A plant of little beauty. The flowers are furnished with small prickles, similar to those of *Arctium Láppa*, or Burdock; whence the name. It will grow in any soil.

racemosa . . . Apetal 7, H. Grass. 1 S. Eur. . . 1771

LÁPPULA. See *Echinospérmum Láppula* and *Triumfetta Láppula*.

LAPSANA, *Linn.* From *lapazo*, to purge; in allusion to its once supposed medicinal virtues. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Plants of little interest, and of the commonest culture. *Synonymes*: 1, *Hyôseris fétida*, *Arnoseris fétida*; 2, *H. minima*, *A. minima*. See *Rhagadiolus* and *Zacantha*.

grandiflora . . . Yel. 7, H. Her. P. 2 Caucasus . . 1816

pubescens . . . Yel. 7, H. A. 2 Europe . . 1816

communis, crispa, fétida 1, intermedia, lyrata, pusilla 2.

LARBREA, *Hilaire*. Named after the Abbé Larbré, a botanical author. *Linn.* 10, Or. 3, Nat. Or. *Caryophyllaceæ*. A small uninteresting weed, succeeding in any common wet soil. *Synonymes*: 1, *Stellaria aquatica*, *uliginosa* —aquatica 1.

LARCH. See *Larix*.

LARDIZÁBALA, *Ruiz* and *Pavon*. In honour of Michael Lardizabala y Uribe. *Linn.* 22, Or. 13, Nat. Or. *Lardizabalaceæ*. A hardy creeper, calculated to cover naked walls. It bears a very nice eatable fruit known in Chili and Peru by the names *Guilbogui*, *Aquilboquil*, and *Cogwill-Vochi*. It grows readily in common garden soil, and is increased by cuttings.

biterata . . . Dull purp. 5, H. Cl. S. 20 Chili . . . 1849

LARDIZABALACEÆ, or LARDIZABALADS, consists principally of twining shrubs, natives of the warmer parts of the world. They greatly resemble *Menispermum* in appearance.

LARICIS. See *Pinus Laricis*.

LÁRIX, *De Candolle*. From the Celtic, *lar*, fat; on account of the tree producing an abundance of resin. *Linn.* 21, Or. 10, Nat. Or. *Pinaceæ*. All the species of this genus are highly ornamental, and some of them are extensively cultivated for their timber, which is adapted to a variety of useful purposes. The larch grows rapidly in almost any soil, and in any situation, yet its timber can only be brought to perfection when the trees are grown in a clear dry atmosphere, on a cold-bottomed soil, rather moist on the surface. Young plants are obtained from seed, which should

be sown in April, on finely-prepared soil. After the seeds are sown, a light roller should be drawn over the bed, to press the seeds firmly into the earth, and they should then have a thin covering of soil. The plants are generally allowed to remain two years in the seed-bed, and afterwards planted into nursery lines, or where they are finally to remain. As the Larch vegetates earlier than most other trees, and suffers more if removed after it has begun to grow, it ought to be transplanted in autumn, or early in spring. We have adopted the names of the species and varieties as given by Mr. Loudon in his very valuable work, the *Arboretum et Fruticetum Britannicum*. Synonymes: 1, *Pinus laricina*, *P. microcarpa*, *Abies microcarpa*; 2, *L. pëndula*, *Pinus pëndula*, *P. intermedia*, *Abies pëndula*; 3, *L. prolifera*; 4, *L. microcarpa*, *P. microcarpa*; 5, *L. dahurica*; 6, *L. intermedia*, *P. intermedia*; 7, *L. sibirica*, *L. rossica*, *Pinus L. sibirica*. See *Pinus*.

LASERPÍTIUM, *Tournefort*. From *laser*, its gum, and *pit*, pitch; the name of the ancient Silphium. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Mere weeds, growing in any common soil. Synonymes: 1, *L. trilobum*, *Siler aqilegifolium*; 2, *L. Libanotis*; 3, *Cnidium caucasicum*; 4, *L. Halleri*; 5, *L. pilosum*; 6, *Cáchrys triquetrum*—*aqilegifolium* 1, *archangelicum*, *asperum* 2, *athamantæ*, *áureum*, *caucasicum* 3, *gállicum*, *G. angustifolium*, *hirsutum* 4, *hispidum* 5, *latifolium*, *marginatum*, *meoides*, *peucedanoides*, *pilosum*, *pruthenicum*, *scabrum*, *Siler*, *triquetrum* 6. See *Cáchrys*, *Cnidium*, *Ligusticum*, *Siler*, and *Thapsia*.

LASERWORT. See *Laserpitium*.

LASERWORT. See *Thapsia Laserpitii*.

LÁSIA. See *Póthos*.

LASIAGRÓSTIS, *Kunth*. From *lasios*, hairy, and *agrostis*, a kind of grass. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Synonymes: 1, *Arundo spe-*

ciosa, *A. calamagrostis*; 2, *Stipa splendens*—*calamagrostis* 1, *splendens* 2.

LASIÁNDRA, *De Candolle*. From *lasios*, hairy, and *andros*, a male; alluding to the hairy stamens. *Linn.* 10, Or. 1, Nat. Or. *Melastomaceæ*. This elegant genus of shrubs well deserves a place in every stove; their large purple blossoms are rather freely produced in panicles. They require to be grown in a mixture of loam, peat, and sand; and cuttings of the young wood will root without difficulty, if planted in the same kind of soil, under a glass, in heat. Synonymes: 1, *Pleroma holosericea*, *Rhéxia holosericea*; 2, *Pleroma Fontanesii*, *Melastoma granulosum*; 3, *Pleroma petiolata*. See *Pleroma*.

argentea 1	. Purp. 7, S. Ev. S. 6 Rio Jan.	. 1816

LASIÓBOTRYS, *Kunze*. From *lasios*, woolly, and *botrys*, a bunch of grapes. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. This species is found beneath the epidermis of honeysuckle leaves; when mature, it is of a black colour, and generally situated on a paler or colourless portion of the leaf—*Lonicera*.

LASIOPÉTALUM, *Cassini*. From *lasios*, woolly, and *petalum*, a petal. *Linn.* 16, Or. 7, Nat. Or. *Sterculiaceæ*. These are small bushy shrubs, producing an agreeable contrast in the greenhouse by their ferruginous leaves and woolly flowers. They grow in loam and peat, and are increased by ripened cuttings, under a glass.

ferrugineum	. White 6, G. Ev. S. 3 N. Hol.	. 1791
macrophyllum	. Pur.gr. 5, G. De. S. 3 N. S. W.	. 1835
parviflorum	. White 6, G. Ev. S. 3 N. Hol.	. 1810

LASIÓPUS, *Cassini*. From *lasios*, hairy, and *pous*, a foot; alluding to the woolly footstalks of its heads of flowers. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. This plant has little beauty to recommend it; any common soil suits it, and it may be increased by divisions.

conchoides	. Yel. 8, H. Her. P. 3 Armenia	. 1834
------------	--------------------------------	--------

LASIOSPÉRMUM, *Lagasca*. From *lasios*, woolly, and *sperma*, a seed; woolly texture of the seeds. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Rather pretty plants, of the simplest culture and propagation. Synonymes: 1, *Santolina anthemoides*; 2, *crithmifolius*; 3, *eriosperma*; 4, *alpina erecta*; 5, *rigida*. See *Seringia* and *Thomasia*.

LATANIA, Commerson. *Latania* is the name of the plant in the Isle of Bourbon. *Linn.* 22, Or. 13, Nat. Or. *Palmaeae*. A genus of fine middle-sized palms, with plaited fan-like fronds. They delight in a rich strong loam, with a tolerable supply of water. *Synonyme*: 1, *chinensis*.

borbonica 1. Grn. wht. 5, S. Palm. 25 Bourbon 1816
glaucohylla 1. Grn. wht. 5, S. Palm. 20 E. Ind. 1823
rubra . . . Grn. wht. 5, S. Palm. 20 Maurit. 1788

LATERAL, on one side, or on the sides.

LATHRÆA, *Linn.* From *lathraeos*, concealed; in allusion to the plant being found in concealed places. *Linn.* 14, Or. 2, Nat. Or. *Orobanchaeae*. A very curious little plant,

furnished with white fleshy scales in the place of leaves. It is very shy of cultivation, and may be increased by carefully dividing the roots.

Squamaria . Green 4, H. Parasite 1 Brit., dry woods.

LATHYRUS, *Linn.* From *la*, augmentative, and *thouros*, anything exciting; in allusion to the medicinal qualities of the seeds. *Linn.* 17, Or. 4, Nat. Or. *Fabaceae*. This genus is formed for the most part of very handsome plants when in flower, the larger kinds being well adapted for arbours or shrubberies, where they must be supplied with branches to support them. Any common soil suits them; they are increased by seeds, and some of the perennial kinds by dividing the roots. The seeds of *L. Aphaca* produce intense headache if eaten in any quantity, while the roots of *L. tuberosus* are said to be wholesome food. *Synonymes*: 1, *Vicia bithynica*; 2, *L. rotundifolius ellipticus*. See *Errum* and *Orobus*.

LAURÆCÆ, or LAURELS. An order of noble trees and shrubs, inhabiting cool places in the tropics. All more or less contain an aromatic and fragrant principle; some bear excellent fruit, and others furnish very good timber.

LAUREL. See *Laurus*.

LAUREL CHERRY. See *Cerasus Laurocerasus*.

LAUREL WATER is obtained by distillation from laurel and peach leaves.

LAURINEÆ. See *Lauræcæ*.

LAUROCERASUS, or CHERRY LAUREL. See *Cerasus Laurocerasus*.

LAURELIA, Juss. See *Pavonia*.

LAURESTINE. See *Viburnum Tinus*.

LAUROPHYLLUS, Thunberg. From *laurus*, a laurel, and *phyllon*, a leaf; in allusion to the similarity of the foliage. *Linn.* 23, Or. 2, Nat. Or. *Urticæcæ*. A shrub of no great beauty, from six to seven feet high, producing its minute green flowers in panicles; it thrives in loam and peat, and may be increased by layers.

capensis . . . Green . 6, G. Ev. S. 6 C. G. H. . 1801

LAURUS, Pliny. From the Celtic word *blaur* (laur, the b is dropped), signifying green, in allusion to the foliage of the plants. *Linn.* 9, Or. 1, Nat. Or. *Lauræcæ*. This is a very handsome and interesting genus of plants. The stove and greenhouse kinds do well in a mixture of sandy loam and peat, and ripened cuttings generally root freely in sand, under a glass; the stove species in a moist heat. Among the most interesting and valuable of the hardy kinds is *L. nobilis*, or bay-tree, which is injured by severe frost: it is, therefore, best to protect the plants with mats when young; they will grow freely in common garden soil, and in the warmer counties where the weather does not hurt them, they attain the size of trees. *L. Benzoin, L. Sassafras*, and several others, are deciduous, and in some situations attain a great size. They may be increased by layers, or cuttings of the roots. The bark of *L. Benzoin* is stimulant and tonic, and in North America it is used in intermittent fevers. In *L. fœtens* an acrid red, or violet juice, is particularly abundant. All the species are more or less aromatic and stomachic. *Synonymes*: 1, *Evôsmus albidus*; 2, *Laurus Borbonia*; 3, *L. californica*. See *Cinnamomum, Persea, Litsæa*, and *Oreodaphne*.

LAVANDULA, Linn. From *lavo*, to wash; in allusion to the use made of its distilled water. *Linn.* 14, Or. 1, Nat. Or. *Lamiæcæ*. The hardy kinds are the only plants of this genus worth cultivating; they are much esteemed for the fragrance of their flowers, and are most valued when grown in a dry gravelly soil; they are freely increased by cuttings planted in a shady situation. The frame kinds do well in any light rich soil, and are readily increased from young cuttings in the same kind of soil. *Synonyme*: 1, *L. formosa*. See *Anisochilus*.

LAVATÈRA, Tournefort. In honour of his friends, the two Lavaters, famous physicians and naturalists of Zurich. *Linn.* 16, Or. 8, Nat. Or. *Malvæcæ*. The greenhouse and frame kinds grow well in any light soil, and are readily increased by cuttings of the ripened wood, planted in the same kind of soil, under a glass. The hardy herbaceous species grow freely in any common soil, and increase by divisions or seeds. The annuals and biennials need only be sown in the open border in spring. *Synonymes*: 1, *Empedoclis*; 2, *undulata*.

- LECIDEA, Acharius.** From *lekis*, a saucer, and *eidos*, like; in allusion to the saucer-like shields. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. A very extensive genus of *Lichens*, found in almost every situation, and at all seasons of the year. *Synonymes*: 1, *Lichen escharoides*; 2, *Lichen atrocarpus*; 3, *Lichen calvus*—*abiétina, alabastrina, alba, albo-cærulescens, a. túrgida, anómala, anthracina, aromática, atro-cinérea, atro-alba, atro-virens, geographica, atro-flava, atro-rufa, cæsio-rufa, cándida, canescens, carneola, cinereo-fusca, citrinèlla, confluens, conspurcata, coracina,*

corticola, dædæla, decipiens, decolorans, granulosa 1, dolosa, Ehrhartiana, epipolia, escharoides, fumosa 2, fusco-atra, fusco-lutea, ichmadophila, immersa, incana, lapicida, Lightfootia, lucida, lurida, luteola, luteo-alba, marmorea, melizæa, microphylla, miscella, (Ederi, orósthea, parasema, petraea, pholidiota, polytropa, quærnea, rivulosa, rubiformis, rupestris 3, sabuletorum, geochroa, sanguinaria, scabrosa, scalaris, silicea, speirea, sulphurea, uliginosa, verruculosa, vesicularis, viridescens.

LECOTEA, *De Candolle*. Named after John Leconte, F.L.S., of Savannah, in Georgia, a celebrated American botanist. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. For culture and propagation, refer to *Pæderia*.

Bojeriana . White . S. Ev. Cl. 6 Madagascar 1823

LECOTIA, *Torr.* See *Peltandra*.

LECYTHIDACEÆ, or **LECTYHS**, consist of large trees growing in the hottest parts of South America, especially in Guiana. The fruit of *Courouppia guianensis* is the cannon-ball tree; the Brazil nuts of our shops are the fruit of *Bertholletia excelsa*.

LECYTHIS, *Laëffling*. From *lecythos*, an oil-jar; in allusion to the form of the seed-vessels. *Linn.* 13, Or. 1, Nat. Or. *Lecythidaceæ*. The soil best adapted to these plants is a mixture of loam and sand, and they require to be kept in a strong heat. Cuttings of the ripened wood will root in sand, under a glass, in heat. The fleshy seeds of *Lecythis* are eatable, but leave a bitter taste in the mouth.

LEDEBŪRIA, *Roth*. After M. Ledebour, a botanical author. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. *L. hyacinthina* is possessed of some beauty, and is of very simple cultivation.

hyacinthina . Grnsh. wht. 6, G. Bu. P. 1 E. Ind. 1832

LEDEBŪRIA, *Link.* Named as above. *Linn.* 5, Or. 1, Nat. Or. *Apiaceæ*. A plant of no beauty, requiring the most simple culture. *Synonyme*: 1, *Tragium tauricum*—pimpinelloides 1.

LEDOCÁRPON. See *Balbisia*.

LEDOCÁRPUM. See *Balbisia*.

LEDON GUM. See *Cistus Ledon*.

LEDUM, *Linn.* From *ledon*, the Greek name for a plant now known as the *Cistus Ledon*. In foliage the present genus agrees with the plant of the ancients. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. This is an ornamental genus of plants, well suited for the shrubbery, where they form a fine contrast to *Rhododendrons*. They thrive best in bog earth, and young plants are obtained from layers, treated in the same way as the *Rhododendrons*. *Synonyme*:

1, *L. greenlandicum*. See *Ammörsine*.

LEEA, *Linn.* In honour of James Lee, founder

of the Hammersmith nursery, and whose grandsons are the present proprietors. *Linn.* 5, Or. 1, Nat. Or. *Vitaceæ*. Plants only worthy of cultivation in general collections. A mixture of loam and peat suits them well, and good sized cuttings root freely in sand, under a glass, in heat. *Synonymes*: 1, *Panax excelsa*, *Aralia excelsa*.

æquata . . Green . 10, S. Ev. S. 10 E. Ind. . 1777

LEEACEÆ. See *Vitaceæ*.

LEE CHEE. See *Euphodia Litchi*.

LEEK. See *Allium Porrum*.

LEERSIA, *Swartz*. After J. D. Leers, a German botanist. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. These plants possess little to recommend them. They grow readily in any common soil, and are increased by seeds.

australis . Apetal . 7, H. Grass. 1 1/2 N. Hol. . 1819
oryzoides . Apetal . 7, H. Grass. 2 Levant . . 1793
virginica . Apetal . 7, H. Grass. 1 1/2 N. Amer. . 1770

LEGHORN STRAW is the straw of a bearded variety of wheat, resembling rye.

LEGUME, } a pod, the fruit of leguminous
LEGUMEN, } plants.

LEGUMINOSÆ. A large group of plants bearing legumes or pods. See *Fabaceæ*.

LEGUMINOUS. Plants which bear legumes, or pods, such as the pea, the bean, &c.

LEIANTHUS, *Grisebach*. From *leios*, smooth, plane, and *anthos*, a flower; on account of the even or regular corolla. *Linn.* 5, Or. 1, Nat. Or. *Gentianaceæ*. A genus nearly allied to *Lisianthus*, to which refer for culture. *Synonymes*: 1, *Lisianthus longifolius*, *Tachia longifolia*; 2, *L. nigræscens*; 3, *L. umbellatus*.
longifolius 1. Yellow . 8, S. Ev. S. 2 Jamaica. 1844
nigræscens 2. Blackish 8, G. B. 1 1/2 Guatam. 1842
umbellatus 3. Grn. yel. 5, S. Ev. S. 8 Jamaica. 1843

LEIGHIA, *De Candolle*. See *Helianthus*.

LEIMANTHIUM, *Michaux*. From *leimon*, a meadow, and *anthos*, a flower. *Linn.* 23, Or. 1, Nat. Or. *Melanthaceæ*. These plants are worth cultivating. They thrive well in a peat soil, in a damp situation, and are increased by seeds. *Synonymes*: 1, *Melanthium hybridum*, *latifolium*, *racemosum*; 2, *monocolum*, *polygamum*; 3, *virginicum*, *Hedonias virginica*, *Verratum virginicum*.
hybridum 1 . White 6, H. Her. P. 2 N. Amer. 1822
monocolum 2 . Brwn. 6, H. Her. P. 2 N. Amer. 1817
virginicum 3 . Brwn. 6, H. Her. P. 2 N. Amer. 1768

LEIOCÁRPU. See *Leocárpum*.

LEIOPHYLLUM, *Spreng.* From *leios*, smooth, and *phyllon*, a leaf; the leaves are quite smooth. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. For cultivation, &c., see *Ledum* and *Ammörsine*.
Lyoni . . White . 4, H. Ev. S. 1 Carolina . 1812

LEMNÆA, *Bory*. In honour of M. Leman, a French botanist. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. This is rather a curious genus; the species are always found floating in fresh-water rivers—*fluviatilis*, *media*, *torulosa*.

LÉMNA, *Linn.* From *lepis*, a scale; in reference to the form of the plants. *Linn.* 21, Or. 1, Nat. Or. *Pistia*æ. Annual weeds, found floating in stagnant water, and known to most under the name of Duckweed—*gibba*, *minor*, *polyrrhiza*, *trisulca*.

LEMNIAN EARTH is the dried and powdered pulp which invests the seed of the fruit of *Adansonia digitata*, usually known by the name of Baobab.

LEMON. See *Citrus medica*.

LEMON-GRASS. See *Cymbopogon Schenanthus*.

LEMNIA, *Lindl.* Named in honour of Sir Charles Lemon, Bart., M.P. *Linn.* 5, Or. 1, Nat. Or. *Rutæ*æ. A beautiful stove shrub, bearing abundance of deep rose-coloured flowers. Cuttings of the half-ripened wood will root in sand, under a glass, in heat.

spectabilis. Deep rose. 9, S. Ev. S. 2 Cuba. 1839

LÉNNEA, *Klotzsch*. After M. Lenné, a distinguished landscape gardener. *Linn.* 17, Or. 5, Nat. Or. *Fabæ*æ. This plant has small pinnated leaves, and clusters of pretty drooping crimson flowers. It loses its leaves in winter, and grows very well in the open air during summer; but as it flowers in May, or even earlier, it can only be treated as a greenhouse plant.

robinoides. Crimson. 4, G. De. S. 6 Mexico. 1843

LENS. See *Ervm Lénis*.

LENTÁGO. See *Viburnum Lentago*.

LENTIBULARIÆ, or BUTTERWORTS, are a small group of dwarf herbaceous plants, living in water or boggy places, and some are very pretty when in flower.

LENTIBULARIÆ. A very interesting group of aquatic plants. See *Lentibulariæ*æ.

LENTICELLE. Rudimentary roots appearing on stems of plants.

LENTÍCULA. See *Ervm Lenticula*.

LENTICULAR, lens, or pea-shaped.

LENTIGINÔSUS, freckled, pimpled.

LENTIL. See *Ervm Lénis*.

LENTISCUS. See *Pistacia Lentiscus*.

LEOCÁRPUS, *Link.* From *leios*, smooth, and *karpos*, a fruit; in allusion to the smooth peridium. *Linn.* 24, Or. 9, Nat. Or. *Lycopodæ*æ. This is found in clusters on rotten wood, and has the appearance of being varnished with vermilion. *Synonymes*: 1, *Lycopérdon fragile*—*verniciôsus* 1.

LEOCHILUS, *Lindley*. From *leios*, smooth, and *cheilos*, a lip, in allusion to the lip of the flower. *Linn.* 20, Or. 1, Nat. Or. *Orchidæ*æ. Stove Epiphytes, nearly allied to *Rodriguezia*, and requiring the same culture. *Synonymes*: 1, *Oncidium carinatus*; 2, *L. herbæceus*, *Oncidium micranthærum*, *Rodriguezia maculata*. See *Oncidium*.

carinatus 1. Orange. 10, S. Epi. 3 Halapa. 1842
cochlearis 1. Yellow. 8, S. Epi. 3 Dominica. 1842
herbæceus 1. Grn. wht. 10, S. Epi. 3 La Guay. 1843
oncioides 2. Wt. p. pur. 12, S. Epi. 3 Mexico. 1842
sanguinolentus Crimson. 11, S. Epi. 3 La Guay. 1842

LEONÔTIS, *Persoon*. From *leon*, a lion, and *ous*, an ear; in reference to the fancied resemblance in the corolla. *Linn.* 14, Or. 1, Nat. Or.

*Lamiæ*æ. Fine ornamental plants. They require to be grown in loam and peat, and should have plenty of air, to allow of their flowering in perfection. Cuttings root in sand, under a glass, in heat. *L. nepetifolia* requires the treatment commonly given to tender annuals. *Synonymes*: 1, *Phlomis Leonurus*; 2, *P. Leonitis*.

intermedia. Orange. 9, S. Ev. S. 3 C. G. H. 1822
Leonurus 1. Scarlet. 11, G. Ev. S. 3 C. G. H. 1712
nepetifolia. Orange. 9, S. A. 3 E. Ind. 1778
ovata 2. Orange. 6, S. A. 1 1/2 C. G. H. 1713

LEÓNICE, *Linn.* Abridged from *Leontopetalon*, which is derived from *leon*, a lion, and *petalon*, a leaf; because of the resemblance of the leaf of *L. leontopetalon* to the impression of a lion's foot. *Linn.* 6, Or. 1, Nat. Or. *Berberidæ*æ. Plants of little beauty, succeeding in any common soil, and increased by offsets, or seeds. See *Caulophyllum*.

altalca. Yel. 4, F. Tu. P. 1/2 Siberia. 1822
Chrysogonum. Yel. 5, F. Tu. P. 1/2 Levant. 1740
leontopetalon. Yel. 4, F. Tu. P. 1/2 Levant. 1597

vesicaria. Yel. 5, F. Tu. P. 1/2 Siberia. 1821

LEONTODON, *Linn.* From *leon*, a lion, and *odon*, a tooth; in allusion to the tooth-like divisions of the leaves. *Linn.* 19, Or. 1, Nat. Or. *Asteræ*æ. Herbaceous plants, of no value. They grow in any common soil, and increase freely by seeds, or divisions of the roots. *Synonymes*: 1, *Prenanthes bulbosus*; 2, *Taraxacum ceratophorum*; 3, *T. glaucanthum*; 4, *T. bicolor*; 5, *Leontodon lividus*; 6, *L. alpinus*—*alpinus*, *bessarabicus*, *bulbosus* 1, *cichoræus*, *ceratophorus* 2, *corniculatus*, *eripodus*, *erythrospermus*, *glaucanthos* 3, *glaucescens*, *lævigatus*, *leucanthos* 4, *nigricans*, *obovatus*, *palustris*, *serotinus*, *Stevenii*, *Taraxacum*. See *Calliopsis* and *Thrinicia*.

LEONTOPÉTALON. See *Leontice leontopetalon*.

LEONTOPÔDIUM, *R. Brown*. From *leon*, a lion, and *pous*, a foot; the heads of the flowers have been fancifully likened to a lion's foot. *Linn.* 19, Or. 2, Nat. Or. *Asteræ*æ. This plant does best cultivated in peat soil; it is well suited for ornamenting rock-work, and is increased by seeds, or divisions of the roots. *Synonymes*: 1, *vulgare*, *Gnaphalium Leontopodium*.

helveticum 1. Yellow 6, H. Her. P. 1/2 Austria. 1776

LEONÛRUS, *Linn.* From *leon*, a lion, and *oura*, a tail; in allusion to the appearance of the spike of flowers. *Linn.* 14, Or. 1, Nat. Or. *Lamiæ*æ. The herbaceous species grow freely in common garden soil, and increase readily by seeds. The other kinds require to be treated similar to other hardy and half-hardy annuals and biennials. *Synonymes*: 1, *L. crispus*; 2, *L. villosus*, *L. condensatus*; 3, *L. heterophyllum*; 4, *L. altaicus*, *L. multifidus*.

Cardiaca. Red. 6, H. Her. P. 3 Brit. banks.

- LEOPARDANTHUS.** See *Grammatophyllum*.
LEOPARD'S-BANE. See *Doronicum*.
LEOPARD'S-BANE. See *Arnica Dorónica*.
LEOPOLDÍNIA. Named by Martins, in memory of the late Empress of Brazil. *Linn.* 21, Or. 6, Nat. Or. *Palmaceæ*. A fine palm, requiring similar treatment to other Brazilian palms.
 pulchra . . . Straw . 5, S. Palm. 60 Brazil . . 1825
- LEOTIA, Hill.** The meaning is not explained. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. A genus of very little interest, found on the ground in moist woods, or on trees—*infundibuliformis*, *lubrica*, *nana*.
LEPACHYS. See *Obeliscaria*.
LEPÁNTHESES, Swartz. From *lepos*, bark, or *lepis*, scale, and *anthos*, a flower; the plants of this genus have very small flowers, and grow upon the bark of trees. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus of the most pigny of orchidææ, with the habit of a *Pleurothallis*. It can only be grown under a bell-glass, among damp moss, in a cool part of the house. *Synonymes*: 1, *Stelis calodictyon*, *Calodictyon andicum*.

- LEPIDÁGATHIS, Willdenow.** From *lepis*, a scale, and *agathis*, a ball. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. This genus is nearly related to *Justicia*; it thrives well in any light rich soil; and cuttings of the young wood, planted in the same kind of soil, and placed under a glass, will root in a very short time.
 cristata . . . Purple . 6, S. Her. P. 2 E. Ind. . 1820
- LEPIDÍDUM, R. Brown.** From *lepis*, a scale; in allusion to the shape of the pods, which appear like little scales. *Linn.* 15, Nat. Or. *Brassicaceæ*. Most of these plants are uninteresting, and none of them pretty. *L. sativum* is the well-known garden cress. They are all easily increased by seeds sown in the open ground. *Synonymes*: 1, *Thlaspi campestre*; 2, *Cochlearia Draba*; 3, *Thlaspi hirtum*; 4, *Lepidium graminifolium*; 5, *L. graminifolium*. See *Eunomia*, *Hutchinsia*, *Ionopodium*, *Senebiera*, and *Teesdalia*.
 sativum . . . White . 6, H. A. 1 Persia . 1548
 crispum . . . While . 6, H. A. 1 Persia . 1548
 latifolium . . . White . 6, H. A. 1 Persia . 1548
- affine*, *bonariense*, *campestre* 1, *capense*, *cardamines*, *chalepense*, *cordatum*, *coronopifolium*, *crassifolium*, *Cunninghamium*, *cuneifolium*, *densifolium*, *divaricatum*, *Draba* 2, *Ecklonii*, *Gussóni*, *hirtum* 3, *hyssopifolium*, *Iberis* 4, *incisum*, *latifolium*, *lineare*, *lyratum*, *Menziesii*, *micranthum*, *Novæ-Hollandiæ*, *oleraceum*, *perfoliatum*, *Piscidium*, *rudicaria*, *spindsum*, *subulatum*, *suffruticosum* 5, *vesicarium*, *virginicum*.
- LEPIDOSPERMA, Labillardière.** From *lepis*, a scale, and *sperma*, a seed; in allusion to the scaly appearance of the seeds. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceæ*. This plant is not possessed of much interest; it will grow in any kind of soil, and is increased by divisions.
 gladiata . . . Apetal . 7, G. Grass. 3 N. Hol. . 1819
- LEPIDOZÀMIA.** See *Zamia*.
LEPIDÒNUM, Wahlenb. *Linn.* 10, Or. 3, Nat. Or. *Caryophyllaceæ*. For culture and propagation, see *Arenaria*.
 villòsum . . . Red . 6, H. A. $\frac{1}{2}$ Siberia . 1837
- LEPIDOTED,** covered with scurfy dots.
LEPISMIUM, Hooker. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. A succulent genus, resembling *Rhipsalis*, and from which it differs but slightly in character. It requires the treatment of *Cacti*, and is of the easiest culture. *Synonymes*: 1, *Cereus squamulosus*, *C. elegans*; 2, *C. tenuispinus*, *Cactus tenuis*, *Cereus myosurus*.
 commune 1 . . . Rose wht. 9, S. Ev. S. 3 Brazil . 1836
 myosurus 2 . . . Yell. wht. 7, S. Ev. S. 4 Brazil . 1837
- LEPRÀRIA, Linn.** From *lepra*, leprosy; the plants on which the species grow appear as if diseased with leprosy. *Linn.* 24, Or. 8, Nat. Or. *Graphidaceæ*. Found most common on old pales, or rocks. They are generally of a yellowish cast. *L. ochracea* is one of the Lichens used in dyeing—*chlorina*, *flava*, *ochracea*, *viridescens*. See *Chlorococcum*.
- LEPROUS,** covered with spots, or scales.
LEPROUSLY-SILVERY, { covered with white or
 { silvery scales, or scurf,
LEPROUSLY-WHITE, { resembling the leprosy.
LEPROUSLY-TOMENTOSE, covered with shaggy down, having the appearance of leprosy.
LEPTÀLEUM, De Candolle. From *leptaleos*, slender, in allusion to the slender filiform

leaves. *Linn.* 15, Nat. Or. *Brassicaceæ*. The seeds of this annual species have only to be sown in the open ground. *Synonyme*: 1, *Sisymbrium filifolium*.

filifolium 1. Yellow . 6, H. A. $\frac{1}{2}$ Siberia. 1820

LEITÁNDRA, *Nuttall*. From *leptos*, slender, and *aner*, an anther. *Linn.* 2, Or. 1, Nat. Or. *Scrophulariaceæ*. The plants of this genus are well adapted for ornamenting flower-borders, and are readily increased by divisions of the roots. *Synonymes*: 1, *Verbena sibirica*; 2, *V. virginica*.

sibirica 1. . Blue . 7, H. Her. P. 2 Dahuria. 1779
virginica 2. . Wht. . 7, H. Her. P. 5 Virginia. 1714
incarnata . . Flesh . 7, H. Her. P. 5 Virginia. 1714
Meyeri . . Blue . 6, H. Her. P. 3 Dahuria. 1837

LEPTÁNTHUS, *Michaux*. From *leptos*, slender, and *anthos*, a flower; the tube of the flower is long and slender. *Linn.* 2, Or. 1, Nat. Or. *Pontederaceæ*. This species may be preserved in peat soil, in a very moist situation; it is increased by offsets. See *Heteranthera*.

gramineus . Yellow 7, H. Aq. P. 1 N. Amer. . 1823

LEPTAÛREA. See *Zæga*.

LEPTOCÁLLIS, *Don*. From *leptos*, slender, and *kalos*, beautiful. Plant slender and very pretty. *Linn.* 5, Or. I, Nat. Or. *Convolvulaceæ*. This plant may be referred to *Ipomœa*, for culture, &c. *Synonymes*: 1, *Ipomœa muricata*, *I. armata*.

quinata 1. Violet . 7, G. Her. P. 3 Mexico .

LEPTOCARPÆA, *De Candolle*. From *leptos*, slender, and *karpos*, a fruit; in allusion to the slender fruit-pods. *Linn.* 15, Nat. Or. *Brassicaceæ*. The seed of this annual should be sown in the open ground early in spring. *Synonymes*: 1, *Tarritus Loeselii*, *Sisymbrium Loeselii*—*Loeselii* 1.

LEPTOCÁRPUS, *R. Brown*. From *leptos*, slender, and *karpos*, a fruit. *Linn.* 22, Or. 3, Nat. Or. *Restiaceæ*. A mere weed, requiring to be grown in the greenhouse, and increased by divisions. *Synonyme*: 1, *Schœnòdum ténax*—*ténax* 1.

LEPTÓCERAS, *Lindley*. From *leptos*, slender, and *keras*, a horn. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Greenhouse terrestrial Orchids, growing freely in rough heath-mould, and increased by division.

fimbriata . . Yellow 5, G. Ter. $\frac{3}{4}$ Swan R. .
oblonga . . Yellow 5, G. Ter. $\frac{3}{4}$ Swan R. .
pectinata . . Yellow 5, G. Ter. $\frac{3}{4}$ Swan R. .

LEPTOCHLÒA, *Beauvois*. From *leptos*, slender, and *chloa*, grass; in allusion to the slender habit of the plants. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. This genus consists for the most part of annuals. They grow in any soil, and are increased by seeds. *Synonyme*: 1, *Poa chinensis*.

cynosuroides . . Apetal 5, Grass. $\frac{3}{4}$ E. Ind. . 1824
domingensis . . Apetal 6, Grass. 3 W. Ind. . 1820

LEPTOMÉRIA, *R. Brown*. From *leptos*, slender, and *meros*, a part. *Linn.* 5, Or. 1, Nat. Or. *Santalaceæ*. Ornamental plants, succeeding well in a soil composed of loam and peat in equal parts; and cuttings of the ripened wood will root readily in sand, under a glass. *Synonyme*: 1, *Thesium drupaceum*.

ácida . . . White . 5 G. Ev. S. 1 N. Hol. . 1823
Billardieri 1. White . 5 G. Ev. S. 1 N. Hol. . 1823

LEPTÓMITUS, *Agardh*. From *leptos*, slender, and *mitos*, a thread. *Linn.* 24, Or. 7, Nat. Or. *Conferaceæ*. These plants are found floating in the water. They consist of very slender intertangled filaments, from the extreme fineness of which the generic name is contrived—*clavatus*, *lacteus*, *minutissimus*, *nanus*.

LEPTOPHÝLLUS, slender-leaved.

LEPTORHÝNCHOS, *De Candolle*. See *Chrysócoma*.

LEPTOSÍPHON, *Bentham*. From *leptos*, slender, and *siphon*, a tube; in allusion to the slenderness of the tube of the corolla. *Linn.* 5, Or. 1, Nat. Or. *Polemoniaceæ*. These are very elegant annuals, well worthy of a place in every flower-border. The seed should be sown in peat soil, and if this is done in autumn, the plants will flower in April and May, but if sown in spring they will produce flowers in autumn. See *Leptodáctylon*.

LEPTOSPÉRMUM, *Forster*. From *leptos*, slender, and *sperma*, a seed; in allusion to the small narrow seeds. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. All the plants of this genus are well worthy of extensive cultivation, as well for the neatness of their foliage as for the beauty of their blossoms. They thrive best in a mixture of loam, peat, and sand, and cuttings root in sand, under a glass; they may also be raised from seeds, but plants from cuttings are preferable, as they flower when young, and those raised from seeds do not flower till they become large. *Synonymes*: 1, *Bildtia flexuosa*; 2, *L. grandifolium*; 3,

B. marginata; 4, *Fabricia myrtifolia*; 5, *L. stellatum*. See *Bildtia* and *Metrosideros*.

LEPTOSTELMA, *D. Don*. From *leptos*, slender, and *stelma*, a crown. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. This is a strong-growing plant, attaining the height of seven or eight feet; the flowers are produced in large panicles. It will grow well in a rich light soil, protected from severe frosts, and may be increased by seeds, or by separating the roots.

maximum . . . Whitsh. 9, F. Her. P. 6 Mexico . 1827

LEPTOSTRÔMA, *Fries*. From *leptos*, thin, and *stroma*, a layer; in allusion to the thin consistence of the species. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. These species are found on the stalks of ferns, and on the leaves of some plants—*caricinum*, *filicinum*, *scirpinum spirææ*.

LEPTÔTES, *Lindley*. From *leptos*, slender; in allusion to the leaves. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These are pretty little species, growing rather freely among broken potsherds, decayed vegetable matter, and moss, and may be increased by divisions.

LEPTÛRIS. See *Lepturis*.

LEPTÛRUS. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Hard grasses. *Synonyme*: 1, *Rottboellia incurvata*.—*filiformis*, *incurvatus* 1, *subulatus*. See *Ophairus*.

LEPYRÔDIA, *R. Brown*. From *lepyrodes*, scaly; because the bractæes are within the scales of the spike. *Linn.* 22, Or. 3, Nat. Or. *Restiaceæ*. This plant requires the protection of the greenhouse. A mixture of light sand, loam, and peat, in equal portions, suits it well, and it may be increased by dividing the roots.

gracilis . . . Apetal. 5, Grass. 2 N. Hol. . . 1824

LËRIA. Named by De Candolle, in compliment to his friend M. Leri. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Mere biennial weeds. They

are natives of the West Indies. *Synonyme*: 1, *Tussilago nutans*—*âlbicans*, *nutans* 1, *pumila*.

LESCHENAULTIA. See *Lechenaultia*.

LESKEA, *Hedwig*. In honour of N. G. Leske, professor of natural history at Marburg. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. A genus of mosses, sometimes united to *Hypnum*, which the species very much resemble. They are found during spring and summer on the trunks of trees, &c. *Synonymes*: 1, *Hypnum atrovirens*, *attenuatum*; 2, *Pterogonium rotundifolium*; 3, *Hypnum medium*, *inundatum*—*complanata*, *dendroides*, *incurvata* 1, *inulacea* 2, *polyantha*, *polycarpa* 3, *pulchella*, *rufescens*, *sericea*, *trichomanoides*.

LESPEDEZA, *Michaux*. In honour of M. Lespedez, once governor of Florida, and a great patron of botany. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Very showy plants when in flower. The herbaceous kinds grow well in peat borders, and are increased by dividing the roots in spring. The shrubby kinds must be grown in a mixture of sand and peat; and cuttings of the young wood root readily in sand, under a glass. The seeds of the annual kinds should be sown in a peat border, in a sheltered situation. *Synonymes*: 1, *Anthyllis cuneata*; 2, *Hedysarum janceum*; 3, *L. hirta*; 4, *L. divergens*; 5, *L. reticulata*; 6, *L. sessiliflora*.

LESSËRTIA, *De Candolle*. In honour of the Baron Benjamin Delessert, of Paris, a most distinguished promoter of botany, and author of the *Icones*, published at Paris in 1823. *Linn.* 10, Or. 10, Nat. Or. *Fabaceæ*. The shrubby and herbaceous kinds are elegant little plants requiring the same treatment as *Swainsônia*. The annual species should be sown in pots early in spring, and placed in the greenhouse, and when about two inches high, to be planted singly into small pots, and shifted into larger ones as they grow.

LETTUCE LAVER. See *Ūla lactuca*.

LETTUCE OPIUM is obtained from *Lactuca saliva* and others.

LEUCADÉNDRON, *Linn.* From *leukos*, white, and *dendron*, a tree; in allusion to the white leaves. *Linn.* 14, Or. 2, Nat. Or. *Proteaceae*. A genus of splendid evergreen shrubs, with handsome foliage, and heads of yellow flowers. *L. argenteum*, or the Silver-tree grows to the height of fifteen or twenty feet, with beautiful silky leaves; it is on that account admirably adapted for ornamenting conservatories. They grow best in loam and peat, with a small portion of sand, provided the pots are carefully drained, and not overwatered. Cuttings of the ripened wood will root readily planted in sand, under a glass. *Synonyme*: 1, *Pròtea argentea*; 2, *P. stellaris*. See also *Melaleuca Leucadéndron*.

LEUCOSTÉMMMA, Benth. Derived from *leukos*, white, and *stemma*, a crown; on account of the white downy seeds. *Linn.* 4, Or. 1, Nat. Or. *Asteraceæ*. This is a very fine species, well deserving of extensive cultivation. It may be referred to *Elichrysium* for culture and propagation. *Synonyme*: 1, *Elichrysium vestitum*.

vestitum 1	. White . 8, G. Ev. S.	2 C. G. H.	. 1774
------------	------------------------	------------	--------

LEUCOTHOE, D. Don. A name of mythological origin. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. A genus very nearly allied to *Andróméda*, which see for culture, &c. *Synonyme*: 1, *Andróméda pulchra*, *Agarista pulchra*; 2, *A.*

neriifolia, *Andróméda neriifolia*, *A. crassifolia*, *Agarista Pöhlhii*. See *Erica*.

pálchra 1	. Wht. grn. 5, G. Ev. S.	2 Caraccas	. 1846
neriifolia 2	. Scarlet . 5, F. Ev. S.	2 Brazil	. 1849

LEUCÓXYLON, white-wooded.

LETZEA. Named by De Candolle, in honour of his friend, De Leuze. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. These are dwarf ornamental plants, seldom exceeding nine inches in height, and producing large purple flowers. Any common garden soil suits them, and they may be increased by divisions of the roots, or by seeds. *Synonymes*: 1, *Cnicus carthamoides*; 2, *Centaurea conferta*; 3, *Cirsium salinum*, *Centaurea altaica*.

LEVER-WOOD. See *Ostrya virginica*.

LEVISTICUM, Koch. From *levo*, to assuage; the plant is said to relieve flatulency. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. This plant succeeds well in common garden soil, and is easily increased by seeds. *Synonyme*: 1, *Ligústicum levisticum*.

officinale 1	. Pa. yel. 6, H. Her. P.	6 Italy	. 1596
--------------	--------------------------	---------	--------

LEWISIA, Pursh. In honour of Captain M. Lewis, who accompanied Captain Clarke to the Rocky Mountains. *Linn.* 13, Or. 1, Nat. Or. *Cactaceæ*. Light loam and brick rubbish is a good soil for this plant, and it may be increased by dividing the roots, or by seeds.

rediviva	. Rose . 4, H. Her. P.	1 N. Amer.	. 1826
----------	------------------------	------------	--------

LEYSSERA, Linn. In honour of Frederick William Leysser, a famous German botanist. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Ornamental plants, requiring to be grown in peat soil, mixed with a little loam; and cuttings, planted in the same kind of soil, under a glass, will root without difficulty. *Synonyme*: 1, *Stachelina graphaloides*. See *Chetachlæna*, *Longchampsia*, and *Relbaniæ*.

LEYCESTERIA. Wallich named this genus in honour of his friend William Leycester, once chief judge at Bengal, a munificent and zealous patron of horticulture. *Linn.* 5, Or. 1, Nat. Or. *Caprifoliaceæ*. This is an elegant and most beautiful shrub when in flower, from the contrast of the deep green hue of its stem and leaves, with the purple colour of the large bractæas and the berries. A light soil suits it best, and it is readily increased by cuttings taken off in autumn or spring, or by seeds. It is well adapted to the front of shrubberies. It will require the protection of a mat in winter in all the northern counties.

formösa	. Wht. pur. 8, H. Ev. S.	3 Nepal	. 1824
---------	--------------------------	---------	--------

LHOTSKYA, Schauer. After Dr. John Lhotsky a German botanical collector. *Linn.* 12, Or.

LILAC. See *Syringa*.

LILACINE, a peculiar property possessed by the lilac (*Syringa vulgaris*), and very useful in intermittent fevers.

LILIACEÆ or **LILY-WORTS**. A large order of very interesting plants, and many of them possessing great beauty.

LILIAGO. See *Phalangium Liliago*.

LILIÁSTER. See *Ozæcia Liliástrum*.

LILUM, *Tournefort*. Derived from the Celtic word *li*, signifying whiteness; on account of the beautiful white flowers of the original species. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. This is an ornamental and well-known genus; most of the species succeed in a rich light soil, but the American species should be grown in peat. All the kinds are readily increased by offsets from the bulbs. In Kamtschatka, the root of *L. Pomponium* is cultivated the same as

the potato is in this country. *Synonymes*: 1, *L. fulgens*; 2, *peregrinum*, *byzantinum*; 3, *L. autumnale*; 4, *L. speciosissimum*; 5, *L. lancifolium*; 6, *L. lancifolium-roseum*; 7, *L. pennsylvanicum*; 8, *aurantiacum*, *bulbiferum*, *philadelphicum*; 9, *Fritillaria Thompsoniana*; 10, *longiflorum*; 11, *cordifolium*. LILY. See *Lilium*.

LILY HYACINTH. See *Scilla Lilio-hyacinthus*.

LILY OF THE FIELD. See *Amaryllis*.

LILY-OF-THE-VALLEY. See *Convallaria*.

LILY PINK. See *Aphyllanthus*.

LILY THORN. See *Catesbæa*.

LIMATODES, *Blume*. Name not explained by author. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Beautiful plants with the habit of *Calanthe*, and requiring the same treatment. *Synonyme*: 1, *pauciflora*.

rosea 1. . . . Rose . 12, S. Ter. 3 Martaban . 1850

LIMB, the border of a flower.

LIMBATE, having an expanded end; or being bordered by something.

LIME. See *Citrus Limonium*.

LIME-TREE. See *Tilia*.

LIMETTA. See *Citrus Limetta*.

LIMEUM, *Linn.* From *limos*, a pest; on account of the supposed poisonous qualities of the plant. *Linn.* 7, Or. 3, Nat. Or. *Illecebraceæ*. A mixture of sandy loam and peat suits this species best; and cuttings root readily under a glass.

africanum . White . 6, G. Her. P. 4 C. G. H. . 1774

LIMNANTHES, *R. Brown*. From *limne*, a marsh, and *anthos*, a flower; in allusion to the habitat of the plant. *Linn.* 10, Or. 1, Nat. Or. *Tropæolaceæ*. *L. Douglasii* is well deserving of a place in every collection, on account of the elegance and beauty of its flowers, which are slightly fragrant. It requires to be grown in a moist and shady situation, and it is increased by seeds which ripen pretty freely.

LIMONIUM. See *Statice Limonium*, *Atalantia Limonium*, and *Citrus Limonium*.

LIMOSÉLLA, *Linn.* From *limus*, mud; in allusion to the habitation of the species; whence the English name Mudwort. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. The seeds of this sub-aquatic should be sown near a pond or rivulet.

aquatica . . . Flesh 8, H. Aq. A. 4 Brit., mud. pl.

LIMOSUS, muddy, growing in mud.

LIMPIDUS, clear, transparent.

LINACEÆ or FLAXWORTS. This order consists of but few genera, most of which are annuals or biennials, one or two species form small shrubs. The tenacity of their fibres and the mucilage and oil in their seeds, are their obvious characters, many of them also have beautiful flowers.

LINÁNTHUS, *Bentham*. From *linon*, flax, and *anthos*, a flower. *Linn.* 5, Or. 1, Nat. Or. *Polemoniaceæ*. An ornamental annual, succeeding well when sown in the open border in spring.

dichotomus . Pink 6, H. . A. 1 California . 1833

LINÁRIA, *Tournefort*. From *linum*, flax; on account of the similarity of the leaves. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. This genus for the most part consists of annuals, well adapted for ornamenting rock-work. *L. triornithophora* is remarkable for the form of its flowers, which bears some little resemblance to three little birds seated in the spur. They thrive best in a light sandy loam, and are readily multiplied by seeds. *Synonymes*: 1, *speciosa*; 2, *Antirrhinum lanigerum*; 3, *A. fruticans*; 4, *A. linarioides*; 5, *spurius*; 6, *A. Linaria*; 7, *A. odorum*; 8, *A. strictum*; 9, *L. striata*; 10, *A. lusitanicum*, *pedunculatum*.

LINGUIFORM, } tongue-shaped.

LINGULATE, }

LÍNGUN. See *Pædèria Língun*.

LÍNKA. See *Rivularia*.

LINNÆA. Dr. J. F. Gronovius, with the concurrence of Linnæus, selected this little depressed, abject, early-flowering, long-overlooked northern plant, to transmit the illustrious name of Linnæus to posterity. *Linn.* 14, Or. 2, Nat. Or. *Copriifoliææ*. This elegant little plant is not only a native of the land which gave birth to Linnæus, but also of Lapland, Norway, Russia, Germany, Switzerland, Savoy, Siberia, &c. In Scotland, the plant was first found in an old fir-wood at Inghismaldie, on the borders of Mearns-shire, in 1795, and since then in several similar situations in the highlands of Scotland. In North America, it has been found in a number of districts, but most plentiful in Canada. It should be grown in a peat border, in a shady situation, where it will grow and flower freely. It will also grow luxuriantly in large pots, filled with peat earth; it is easily increased by separating the creeping stems when rooted. The American plants are commonly stronger than the European ones.

LINODORUM. See *Calopogon*, *Geodorum*, and *Blitia*.

LINGSYRIS, De Candolle. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. A hardy herbaceous plant, growing freely in common garden soil, and propagated by division.

divaricata. Yellow 7, H. Her. P. 2 Australia.

LINT and **Tow** are the fibres of *Linum usitatissimum* separated by dressing from the woody matter of the plant.

LINUM, Linn. From the Celtic word *lin*, a thread; whence the Greek, *linon*, and the Latin, *linum*. *Linn.* 5, Or. 5, Nat. Or. *Linaceae*. These plants are mostly ornamental, and well worth cultivating in every collection. The greenhouse and frame kinds grow best in a mixture of loam and peat, and cuttings root freely under a glass. The hardy shrubby kinds do well in any light soil, and are increased by cuttings under a glass. The hardy herbaceous species are well suited for ornamenting flower-borders; but the dwarf kinds do best on rock-work, or even grown in pots, that they may be protected by a frame in frosty or very wet weather; they may be increased by divisions of the roots, by cuttings, or by seeds. The annual and biennial species should be sown in the open ground in April. The fibres of *L. usitatissimum* is the flax of commerce, from which linen cloth is made.

Synonymes: 1, *perénne*; 2, *tenuifolium*, *bicolor*; 3, *angustifolium*, *decumbens*; 4, *angustifolium*; 5, *austriacum*, *perénne*; 6, *austriacum*.

LIQUIDÁMBAR, *Linn.* From *liquidus*, liquid; *ambar*, amber; in allusion to the gum which exudes from the trees. *Linn.* 21, Or. 9, Nat. Or. *Altingiáceæ*. Ornamental hardy trees. *L. styraciflua*, or Sweet Gum-tree, attains a great height, and in form and habit bears a strong resemblance to the Maple. They grow freely in any common soil, and plants are obtained from cuttings, or seeds. *Synonyme* : 1, *orientale*.

LIQUIDAMBERS. See *Altingiáceæ*.

LIQUID STORAX is yielded by *Dammara orientalis*.

LIQUIRÍTIA. See *Glycyrrhiza*.

LIQUORICE. See *Glycyrrhiza*.

LIRIODÉNDRON, *Jussieu*. From *leirion*, a lily, and *dendron*, a tree; the flower produced by this tree bears some resemblance to a lily, but is more like a tulip. *Linn.* 13, Or. 6, Nat. Or. *Magnoliáceæ*. The Tulip-tree grows to a considerable height before it will produce its flowers, which are large. It is well suited for planting singly on lawns, or for forming avenues. It is generally increased from imported seeds, which should be sown in March, in a light rich soil, well exposed to the sun, and covering them about half an inch deep. They commonly remain two years in the ground before they come up. From the tonic quality of *L. tulipifera*, it has been said to be equal to Peruvian bark. The wood of this tree is smooth and fine-grained, very easily wrought, and not liable to split. It is used in carving and ornamental work, but is generally used in this country to make the panels of coach and chaise bodies.

obtusifolia . Yel. red 6, H. De. T. 50 Pensyl. . 1663

LISIÁNTHUS, *Linn.* From *lysis*, dissolution, and *anthos*, a flower; in allusion to its being a powerful cathartic. *Linn.* 5, Or. 1, Nat. Or. *Gentianáceæ*. A mixture of loam, sand, and peat is the soil best suited for these ornamental plants. Cuttings of the shrubby and herbaceous kinds strike freely in sand, under a glass. *L. Russellianus* is the most splendid of the genus; it was discovered by the lamented Drummond in Texas, who described it as "not excelled in beauty by any plant."

The flower is large, handsome, borne in a terminal panicle; the corolla is as large as a tulip, of a fine rich purple, with a very deep eye in the centre. The flower continues perfect for two or three weeks. By forcing it early in the spring, and planting out in the open border, it will probably be found to flower as freely as *Phlox Drummondii*. It is figured as an annual, but is very likely to prove biennial. *Synonymes* : 1, *L. tetragonus*, *L. trifidus*; 2, *Eustoma silenifolia*; 3, *L. angustifolius*. See *Leianthus*.

LÍSTERA, *R. Brown*. In honour of Martin Lister, M.D., a famous English physician and naturalist. *Linn.* 20, Or. 1, Nat. Or. *Orchidáceæ*. Curious little plants, growing in peat and loam, and increased by divisions of the roots. *Synonyme* : 1, *Nebétia ovata*.

cordata . . Brown . 6, H. Ter. ¼ Brit., moi. hea.
ovata 1 . . Green . 5, H. Ter. 1 Brit., woods.

LITCHI. See *Euphòria Litchi*.

LITHONTRIPTIC, having the power of breaking the stone.

LITHOSPÉRUM, *Linn.* From *lithos*, a stone, and *sperma*, a seed; the little nuts or seeds are extremely hard, and have a surface as smooth as a polished pebble. *Linn.* 5, Or. 1, Nat. Or. *Boragináceæ*. The species of this genus are all of the easiest culture. The shrubby kinds are well adapted for growing on rock-work, or on the top of walls, where they

will speedily establish themselves, if allowed to scatter their seeds; or they may be kept in pots among alpine plants, and increased by cuttings. *Synonymes*: 1, *L. latifolium*; 2, *Anchusa tinctoria*; 3, *Bátschia conspicua*, *L. conspicuum*. See *Arnèbia*, *Bátschia*, and *Pulmonària*.

LLØYDIA, Sal. Named in honour of Mr. Lloyd,

an English botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. *Synonyme*: *Ornithogalum striatum*. A hardy bulbous plant, merely requiring to be planted in a dry situation in the open borders, and treated like the hardy species of *Ornithogalum*.

striata . . Wht. striped 5, H. B. P. Siberia . 1789

LOAF SUGAR is refined sugar as procured from the sugar-cane, beet-root, parsnip, maple, birch, grape, and many other plants, but the cane supplies the most and of a better quality than any of the other kinds.

LOASA, Linn. The meaning is unknown. *Linn.* 18, Or. 2, Nat. Or. *Loasaceæ*. This is a genus of plants highly interesting from the beauty of their curiously formed flowers. They would all be invaluable in collections were it not for the powerful stinging property of some of the species, as *L. Placai*: on that account it is necessary to be very careful in touching them. Any common loamy soil suits them, and they are easily increased by seeds. *Synonymes*: 1, *ambrosiaefolia*; 2, *tricolor*; 3, *acanthifolia*. See *Blumenbáchia*, *Scyphanthus*, *Catophora*.

LOASACEÆ or **LOASADS**. An order of annual and herbaceous plants with climbing habits, and covered with pungent hairs which secrete an acrid juice which stings like a nettle. Some are very handsome climbers, and well deserve cultivating.

LOBADIUM, Raf. See *Rhús*.

LOBATE, lobed, divided into a number of segments.

LOBATELY-CRENATED, having deep crenatures, or indentations.

LOBE, a division.

LOBELIACEÆ or **LOBELIADS**. An extensive order containing plants of considerable beauty, but all more or less poisonous, nevertheless some of the species are used medicinally.

LOBELIA, Linn. In honour of Matthew Lobel, author of various botanical works; he was a native of Lille, became physician and botanist to James I., and died in London in 1616. *Linn.* 5, Or. 1, Nat. Or. *Lobeliaceæ*. This is an extremely interesting genus of plants, on account of the beauty of the blossoms. The greenhouse and stove shrubby and herbaceous kinds grow well in a mixture of peat and sand; the shrubby kinds are readily increased by cuttings in the same kind of soil, and the herbaceous species by dividing, and by seeds. The hardy herbaceous kinds do well in a light rich earth, or peat soil; but in winter most of

them require the protection of a frame. The greenhouse annuals and biennials must be sown in pots, and treated as other greenhouse annuals and biennials. The seeds of the hardy kinds have only to be sown in the open border. *L. longiflora* is one of the most venomous of plants. Barton says the Spanish Americans call it *Robenta Carállos*, because it proves fatal to horses that eat it, swelling them until they burst. Taken internally, it acts as a violent cathartic, the effects of which no remedy can assuage, and which ends in death. *Synonyms*: 1, *L. erinoides*; 2, *L. goodenoides*; 3, *L. spicata*; 4, *L. crispa*; 5, *L. commutata*; 6, *L. maculata*; 7, *Isótoma axillaris*; 7, *L. pedunculata*; 8, *L. micrantha*; 9, *L. speciosa*, *Milleri*; 10, *L. crispa*; 11, *L. splendens ignea*, *Rapuntium splendens*. LOBELIA. See *Parastranthus*.

LOBELIA. See *Pratia*.

LOBELIA. See *Siphocampylus*.

LOBELIA. See *Tupa*.

LOBLOLLY PINE. See *Pinus Teda*.

LOCATED, placed.

LOCCELLI. The peridia of certain fungals.

LOCHERIA. See *Verbesina* and *Achimenes*.

LOCKHARTIA. *Hooker*. See *Bernandesia*.

LOCULAMENTS, partitions or cells of a seed-vessel.

LOCULAR ; a fruit is called unilocular if it contains but one cell, bilocular if it contains two cells, and so on.

LOCUSTA. A spikelet of grasses.

LOCUST-TREES. See *Hymenaea Courbaril*, and *Robinia Pseud-acacia*.

LODDIGESIA, *Sims*. In honour of Conrad Lod-

diges, a celebrated nurseryman at Hackney near London. He died in 1820. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. This is an extremely interesting shrub, succeeding well in an equal mixture of sandy loam and peat; and cuttings of the young wood root freely planted in sand, under a glass.

oxalidifolia . Pa. pur. 6, G. Ev. S. 1½ C. G. H. 1802

LODICULARIA. From *lodícula*, a hypogynous scale; very large in this genus. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. *Synonymes*: 1, *Rottboellia fasciculata*—*fasciculata* 1.

LODOICEA, Labillardiere. Named after Laodice, the daughter of Priamus and Hecuba. *Linn.* 22, Or 12, Nat. Or. *Palmaceæ*. For the culture and propagation of this palm, see *Cocos*. *Synonyme*: 1, *Cocos maldivica*, *L. maldivica*. *sechellarum* 1. Straw 5, S. Palm. 80 Seychelles .

LOEFLINGIA. Named by Linnæus, in compliment to his disciple Peter Lœfling, a traveller in Spain and America, who died on his travels in 1756. *Linn.* 3, Or. 1, Nat. Or. *Illecebraceæ*. The seed of these plants need only be sown in the open ground where they are to remain.

hispánica . . Green . 6, H. . A. ½ Spain . 1770
pentandra . . Green . 6, H. . A. ½ S. Eur. . 1820

LOESELIA, Linnæus. Named after John Loesel, author of *Flora Prussica*. *Linn.* 5, Or. 2, Nat. Or. *Polemoniaceæ*. Elegant shrubs requiring to be grown in a mixture of loam, peat, and sand; and increased by cuttings planted in sand under a hand-glass in heat. *Synonymes*: 1, *Hoitzia cœrulea*; 2, *H. glandulosa*.

cœrulea 1 . . Blue . 6, G. Ev. S. 1 Mexico . . 1824

LOGANIACEÆ or **LOGANIADS** constitute a small order of shrubs, trees, and herbaceous plants, possessing intensely poisonous properties, of which *Strýchnos* may be taken as an example.

LOGANIA, R. Brown. In honour of J. Logan, a distinguished botanist. *Linn.* 5, Or. 1, Nat. Or. *Loganiaceæ*. Rather small but interesting shrubs, which produce their flowers in axillary or terminal bunches. They grow well in sandy loam and peat, and ripened cuttings root freely in sand, under a glass. *Synonymes*: 1, *Eusima albiflora*; 2, *Exacum vaginale*. See *Geniostoma*.

LOPHOLA, *Ker*. A diminutive of *lophia*, a crest; in reference to the crest of the sepals. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. This is a rare little herbaceous plant, growing in peat soil in a damp situation. It will also grow and flower well in pots placed in pans of water;

it is increased by dividing the roots. *Synonymie*: 1, *Constylis americana*. aurea l. . Yellow . 6, H. Her. P. 1½ N. Amer. 1811

LOPHIRA, Banks. One of the sepals is extended out into a ligulate wing or crest; whence the name, from *lophos*, a crest. *Linn.* 12, Or. 1, Nat. Or. *Dipteraceæ*. This is a very fine low-growing tree. It has tap-roots, and therefore requires to be planted in a very deep pot, in order to allow the roots to descend. It should be grown in sandy loam and peat, and kept rather dry; cuttings of the ripened wood will root in sand, under a glass, in heat. In Sierra Leone, it is called *Scurby* or *Scrubby Oak*. africana . White . 6, S. Ev. T. 10 S. Leone . 1822

LOPHIUM, Fries. From *lophion*, a little hillock. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. These extremely minute plants are very similar to the valves of a bivalved shell—*elatum*, *mytilinum*.

LOPHOLEPIS, J. Smith. From *lophos*, a crest, and *lepis*, a scale, in allusion to the spore-cases. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. *Synonymie*: 1, *Goniophlebium tectum*. ciliata . . Yellow . 3, S. Her. P. 1 W. Ind . tecta l. . Yellow . 3, S. Her. P. 1 W. Ind .

LOPHOSCIADIUM, De Candolle. See *Ferula*.

LOPHOSPÉRUM, D. Don. From *lophos*, a crest, and *sperma*, a seed; the seeds are furnished with a crest-like wing. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. This genus is composed of very elegant plants, with large purple, or rose-coloured flowers; for culture and propagation, see *Maurandya*. *Synonymie*: 1, *Rhodochiton volubile*, L. *Rhodochiton*.

LÔREYA, De Candolle. Dedicated to M. Lorey, author of a Flora of Burgundy. *Linn.* 10, Or. 1, Nat. Or. *Melastomaceæ*. For culture, &c., see *Melastoma*. *Synonymie*: 1, *Melastoma arboræscens*.

arboræscens . White . 7, S. Ev. S. 4 Guiana . 1822

LOTE-TREE. See *Diospyrus Lôtus*.

LOTE. See *Zizyphus Lôtus*.

LÔTUS. From *lotos* of Theophrastus; the true *Lôtus* is *Zizyphus Lôtus*. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. An ornamental genus of plants. The greenhouse and frame species grow freely in any light soil, and are increased by cuttings of the young wood planted in sand, under a glass, or they may be increased by seeds. The hardy kinds are well suited for ornamenting rock-work, or dry banks. The seeds of the hardy annual species need only be sown in the open ground in spring. *L. corniculatus* and *L. major* are sometimes sown with white clover and cow-grass, in laying down permanent pastures. *Synonymes*: 1, *L. diffusus*; 2, *Cytisus argenteus*; 3, *L. decumbens*; 4, *Trigonella indica*. See *Carmichaelia*, *Doronicum*, *Hosackia*, and *Tetragonolobus*.

- LUGDA**, *De Candolle.* See *Anthemis*.
- LÛHEA**, *Willdenow.* In honour of Charles Vander Luhe, a famous German botanist. *Linn.* 18, Or. 2, Nat. Or. *Tiliacææ*. This is a very pretty plant, which thrives well in a mixture of peat and loam; and cuttings of the nearly ripened wood root readily in sand, under a glass, in heat. In Brazil, they use the bark of *L. paniculata* for tanning leather.
 paniculata . . Rosy . 6, S. Ev. Cl. 6 Brazil . 1823
- LÛSIA**, *Gaudich.* The meaning of the name not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidacææ*. This is a very pretty species, very scarce in collections. The sepals and petals are light green, and the labellum is

strongly streaked internally with deep purple. The leaves of the plant bear a strong resemblance to those of an *Aërides*, and the plant requires precisely the same treatment as that genus.

Garden varieties.—These are now very numerous—their colours and names are given in the nurserymen's catalogues.

LUPULUS. See *Humulus Lupulus*.

LURID, between a purple, yellow, and grey colour.

LUTEOLA. See *Réseda Luteola*.

LUVÚNGA, *Hamilton*. From *Luvunga-luta*, its Sanscrit name. *Linn.* 16, Or. 1, Nat. Or. *Aurantiaceæ*. The species of this genus grow in any light rich soil, and are increased by cuttings planted either in sand or soil, under a glass. *Synonyme*: 1, *Limnonia scandens*.
scandens 1. . White . 6, S. Cl. S. 10 Silhet . 1843

LUXEMBURGIA, *Hilaire*. In honour of the Duke of Luxemburg, under whose patronage M. A. de St. Hilaire commenced his botanical researches in Brazil. *Linn.* 16, Or. 8, Nat. Or. *Sauvagesiacæ*. Beautiful shrubs, bearing racemes of bright yellow flowers; they require a moderate stove heat, and blossom during the summer months. They may be propagated by cuttings of the half-ripened wood in sand, under a hand-glass. *Synonyme*: 1, *Plectanthera ciliosa*.

ciliosa 1. . Yel. . 6, S. Ev. S. 2 Brazil . . 1841
corymbosa . Yel. . 6, S. Ev. S. 4 Brazil . . 1840

LŪZULA, *De Candolle*. From the *Gramen Luzule* of Bauhin, the Glowworm-grass. *Linn.* 6, Or. 1, Nat. Or. *Juncaceæ*. These plants are nearly related to *Juncus*, from which they are at once distinguished by their flat leaves. They possess but little beauty, and are of the easiest culture. *Synonymes*: 1, *Juncus arcuatus*; 2, *J. spadicæus*.

Berthelotii . Apetal 6, F. Grass. 1 Teneriffe . 1820

albida, *arcuata* 1, *campéstris*, *capensis*, *congesta*, *flavescens*, *Fostèri*, *glabrata*, *lutea*, *maxima*, *multiflora*, *nivea*, *pediformis*, *pilosa*, *spadicea* 2, *spicata*, *sudetica*, *vernalis*.

LUZURIAGA. In honour of D. Ign. M. R. de Luzuriago, M.D., a Spanish botanist. *Linn.* 6, Or. 1, Nat Or. *Smilacæe*. See *Geitonopodium*.

LYCASTE, *Lindl.* *Lycaste* was a beautiful woman of Sicily. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæe*. This very elegant genus has been separated from *Maxillaria*; they require similar treatment to *Stanhopeas*. *Synonymes*: 1, *Maxillaria aromatica*, *Cölac aromatics*; 2, *M. Barringtonia*; 3, *M. costata*; 4, *M. cruenta balsamea*; 5, *M. Déppeii*; 6, *M. macrophylla*; 7, *M. Skinneri*; 8, *M. tetragona*; 9, *M. macrobulla*.

LYCHNIDEA. See *Erinus Lychnidea* and *Phlox*.

LYCHNIS, *De Candolle*. From *lychnos*, a lamp; on account of the brilliancy of the flowers of most of the species. *Linn.* 10, Or. 5, Or. Nat. *Caryophyllacæe*. An extremely beautiful genus of plants, well meriting extensive cultivation for the brilliancy of their flowers. Among the most showy and esteemed of the border flowers, is *L. Chalcedonica*, the double varieties of which require some care to prevent them from returning to a single state. *L. fulgens* and *grandiflora* are truly beautiful; the latter will grow and flower well if planted out in the open border in spring, but it must be taken up in autumn, or the frost will kill it. They all grow freely in light rich loamy soil; but they must be frequently divided, or they will dwindle away, and the best time to do this is early in spring. The seed of the annual species has only to be sown in the open border in spring. *L. Cali Rôsa* is very handsome. *Synonymes*: 1, *Viscaria alpina*; 2, *L. brachypetala*; 3, *Agrostemma coronaria*; 4, *A. cœrsica*; 5, *A. sylvestris*; 6, *A. Flœs-cuculi*; 7, *Githago segetum*; 8, *Viscaria helvetica*; 9, *V. neglecta*; 10, *Githago nicæensis*; 11, *Agrostemma pyrenaica*; 12, *A. sibirica*; 13, *A. dioica*; 14, *Viscaria vulgaris*. See *Viscaria* and *Agrostemma*.

LYCHNITIS. See *Verbascum Lychnitis*, *Phlomis Lychnitis*, and *Amellus Lychnitis*.

LYCIOPLESIUM, *Miers*. See *Lycium*.

LYCIOSÉRISSA, *Rœmer* and *Schultes*. From *lycium*, and *serissa*, serissa-like lycium. *Linn.* 5, Or. 1, Nat. Or. *Solanacæe*. A Cape shrub, which grows in peat and loam, and is increased by cuttings—*capensis*.

LYCIUM, *Linn.* From *lycion*, a name given by Dioscorides to a thorny shrub, and applied to this genus because of its containing some thorny shrubs. *Linn.* 5, Or. 1, Nat. Or. *Solanacæe*. The stove and greenhouse kinds require the same treatment as other similar plants. *L. æfrum*, and some others of the Cape species, thrive and flower well against a south or west wall, and are very handsome when in flower. The hardy species are admirably suited for training against trellis-work, or walls, or for covering arbours. They are all readily increased by cuttings of the ripened wood planted in sand, under a glass. *Synonymes*: 1, *L. carnosum*; 2, *Lycioplegium pubiflorum*, *Lâtna venenata*. See *Grabowska*, *Berberis*, and *Chaenestes*.

LYCÓGALA, Michaux. From *lykos*, a wolf, and *gala*, milk. *Linn.* 24, Or. 9, Nat. Or. *Lycopodaceæ*. In the early stage of this plant's existence, it appears like a mass of thick cream. It is found upon rotten or decayed wood and leaves—*miniata*.

LYCOPÉRDON, Michaux. From *lykos*, a wolf, and *perdo*, to explode backwards. *Linn.* 24, Or. 9, Nat. Or. *Lycopodaceæ*. This is a genus of roundish, tuber-like plants, which, when ripe, explode, and emit their spores like smoke, and are known among country people by the name of Puff-balls. They grow in pastures and on the stumps of trees—*Bovista*, *excipuli-forme*, *perlátum*, *pratense*, *pyriforme*. See *Géstrum*, *Institale*, *Leocarpus*, and *Rhizopogon*.

LYCOPÉRSICON, Tournefort. From *lykos*, a wolf, and *persicon*, a peach; in allusion to its aphrodisiacal qualities. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. The *Lycopérsicon*, or Love-apple, consists chiefly of annual plants, several of which are trained against walls for the sake of their fruit, which is used for soups. They are generally raised in frames, or in a stove, and when of sufficient size, they are transplanted into the open border. *Synonymes*: 1, *Solanum Pseudo-Lycopérsicum*; 2, *S. Lycopérsicum*; 3, *S. pimpinellifolium*.

LYCOPÉRSICUM. See *Lycopérsicon*.

LYCOTODIACEÆ, or CLUB-MOSSES. A small order of moss-like, flowerless plants, chiefly with creeping stems.

LYCOPÓDIUM, Linn. From *lykos*, a wolf, and *pous*, a foot; because of the resemblance of the roots. *Linn.* 24, Or. 3, Nat. Or. *Lycopodiaceæ*. The hardy species of Club-moss require to be cultivated in peat soil, in a moist situation; some of them succeed in pots of water. They are readily increased by suckers. *Synonymes*: 1, *L. apothecium*; 2, *Selaginella cordata*.

LYCÓRUS. See *Nerine*.

LYCÓSERIS, De Candolle. From *lykos*, a wolf, and *seris*, succory. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Plants of no beauty, and of easy culture. *Synonyme*: 1, *Atractylis mexicana*—*mexicana* 1.

LYCOTROPAL. An orthotropical ovule curved like a horse-shoe.

LYGEUM, Linn. From *lygeo*, to bend; on account of its flexibility. *Linn.* 3, Or. 1, Nat. Or. *Graminaceæ*. A species of grass with rushy leaves. It is much used in Spain, Provence, &c., for making ropes, baskets, nets, for filling mattresses, &c. It grows in light loamy soil, and is increased by dividing the roots.

Spartum . . . Apetal . 5, H. Grass. 1½ Spain. 1776

LYGODESMIA, D. Don. From *lygodes*, flexible, and *desme*, a bundle. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *Synonyme*: 1, *Prenánthes punicea*—*punicea* 1.

LYGODIUM, Swartz. From *lygodes*, flexible; in allusion to the twining habit of the plants. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceae*. The Snake's-tongue is a climbing genus of ferns, which grows freely in a mixture of turfy loam and peat, and is readily increased by dividing of the roots, or by seeds sown in the usual way. *Synonymes*: 1, *Lygodium dichotomum*; 2, *Hydroglossum hirsutum*; 3, *Osmunda scandens*.

LYGODYSODIA. See *Paderia*.

LYME-GRASS. See *Elymus*.

LYMPHATIC, belonging to lymph or sap.

LÝNGBYA, Agardh. In honour of the famous Danish botanist, H. C. Lyngbye. *Linn.* 24, Or. 7, Nat. Or. *Conferaceae*. Curious plants, resembling some species of the genus *Conferva*. They are found on damp earth at all seasons of the year—*Carmichaelia, crispa, ferruginea, muralis, prolifera, speciosa*.

LYONIA, Nuttall. In memory of John Lyon, an American collector of plants, who fell a victim to a dangerous epidemic among those savage and romantic mountains which had so often been the theatre of his labours. *Linn.* 10, Or. 1, Nat. Or. *Ericaceae*. Very ornamental shrubs, well worth a place in every garden. They grow best when planted in a peat soil, and may be increased by layers, or seeds; if by seeds, they must be sown in pots filled with sandy peat soil, and covered slightly over. *Synonymes*: 1, *L. nitida, lucida, Andromeda coriacea*; 2, *Andromeda ferruginea*; 3, *A. frondosa, A. paniculata*; 4, *A. mariana, A. racemosa paniculata*; 5, *A. ferruginea*; 6, *A. jamaicensis*.

LYRATE, lyre-shaped.

LYSIMACHIA, Linn. From *lysis*, dissolution, and *mache*, strife. *Linn.* 5, Or. 1, Nat. Or. *Primulaceae*. A very pretty genus of plants, with mostly yellow flowers. *L. Nummularia* is a handsome free-flowering plant, and from its trailing habit is well fitted for decorating rock-work. All the species are of the easiest culture, and may be propagated by divisions, except *L. dubia* and *L. Linum-stellatum*, which must be increased by seeds. *Synonymes*: 1, *atropurpurea*; 2, *Asterolinum stellata*; 3, *quadrifolia*; 4, *Lubnia atropurpurea*.

MACLEAYIA, *R. Brown*. In honour of Alexander McLeay, F.R.S., L.S., a famous entomologist and colonial secretary in New South Wales. *Linn.* 13, Or. 1, Nat. Or. *Papaveracææ*. A very beautiful herbaceous plant, succeeding in any rich mould, and increased by dividing the roots in spring; it may also be propagated by seeds. *Synonyme* : 1, *Boccœnia cordata*.

cordata 1 . . .	Red yel. 6, H. Her. P. 6	China . 1795
-----------------	--------------------------	--------------

MACLURA, *Nuttall*. In honour of William MacLure, a North American geologist. *Linn.* 21, Or. 4, Nat. Or. *Moracææ*. A genus of very ornamental trees, attaining the height of thirty feet. They require to be grown in turfy loam and peat, and are increased from cuttings of the ripened wood planted in sand, under a glass. *M. aurantiaca* should be slightly protected in severe weather. *Synonymes* : 1, *Morus Plumieri*, *Broussonetia Plumieri* ; 2, *M. tinctoria*, *B. tinctoria*.

MACOUCOÛA. See *Ilex Macoucoua*.

MÁCQUI. See *Aristotelia Macqui*.

MACRADËNTIA, *R. Brown*. From *makros*, long, and *aden*, a gland; in allusion to the long caudicle of the pollen-masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidacææ*. This is rather a pretty genus, requiring a strong moist heat to keep the species healthy. They should be potted in turfy peat broken into small squares, and raised a little above the pot, which must have a good drainage. See *Epidéndron*.

MACRÆA. See *Viviania*.

- MACRÁNTHUS**, *De Candolle*. From *makros*, long, and *anthos*, a flower; in allusion to the long flowers. *Linn.* 17, Or. 4, Nat. Or. *Fabæceæ*. This plant is a native of Cochin China, where it is cultivated for table, the seeds being cooked like French beans. It grows in a mixture of loam and peat, and is increased by seeds, which should be sown in a hotbed.
cochinchinensis White 6, H. Cl. A. 4 Coch. China 1826
- MACROCHILUS**, *K. and W.* From *makros*, long, and *cheilos*, a lip; the lip of flower is long. *Linn.* 20, Or. 1, Nat. Or. *Orchidæceæ*. Nearly related to *Milönia*, and requiring the same treatment. *Synonyme*: 1, *Milönia spectabilis*. See *Milönia*.
Fryanus 1 . Red green 9, S. Epl. 1 Brazil . . 1835
- MACROCHLÄMYS**, *Ducaine*. From *makros*, long, and *chlāmys*, a covering. *Linn.* 14, Or. 2, Nat. Or. *Gesneræceæ*. For culture and propagation, see *Alloplēctus*. *Synonyme*: 1, *Alloplēctus Patrisii*.
Patrisii 1 . Scarlet 7, S. Cl. P. 2 St. Martha .
- MACROCHLÖA**, *Kunth*. From *makros*, long, and *chloa*, grass; length of herbage. *Linn.* 3, Or. 2, Nat. Or. *Graminæceæ*. *Synonyme*: 1, *Slipa tenacissima*—*arenaria*, *tenacissima* 1.
- MACROCNEMUM**, *R. Brown*. From *makros*, long, and *cneme*, a leg; in allusion to the long flower-stalk. *Linn.* 5, Or. 1, Nat. Or. *Cinchonæceæ*. Ornamental plants, succeeding in loam and peat, and propagated by cuttings in sand, under a glass, in heat. See *Mussända*.

MAGIC-TREE. See *Cántua buxifolia*.

MAGNOLIA, *Linn.* After Pierre Magnol, professor of medicine at Montpellier, and author of several botanical works; he died in 1715. *Linn.* 13, Or. 6, Nat. Or. *Magnoliaceæ*. This is a genus of very elegant and showy plants when in flower, and all well worthy of extensive cultivation. The hardy kinds being remarkably handsome shrubs, should be planted in conspicuous situations, where they will flower profusely when they attain a good size.

M. glauca and some others grow best in a peat soil in a moist situation. They are generally increased by layers put down in spring or autumn, or by seeds; when the layers are first taken off, they should be potted in a mixture of loam and peat, and placed in a close frame till they have taken fresh root. None of the leaves should be taken off or shortened, nor any shoots be cut off, or their tops shortened, as they will not succeed so well; for the more branches and leaves are on, the sooner they will strike fresh root. The Chinese kinds are often inarched or budded on *M. obovata*, and take readily. The greenhouse kinds thrive best in a mixture of peat and loam, and are also increased by inarching or budding on *M. obovata*, one of the readiest growing kinds. *M. fuscata*, and any of the weak-growing species, increase with facility from cuttings taken off as soon as ripe, and planted in a pot of sand, under a glass. The seeds of the North American species are received annually from that country. They should be sown as soon as possible after their arrival in pots of light rich earth, covering them half an inch deep: these may be placed either in a hotbed or a warm sheltered situation, or they may be sown in the open ground, and when the plants are of sufficient size, they should be planted out singly into pots, and sheltered till they have taken fresh root, and they should be protected from the frost by a frame for two or three successive winters, giving them the benefit of the open air in mild weather. *Synonymes*: 1, *M. gracilis*, *M. Yulan*; 2, *M. Soulangeana*; 3, *M. tomentosa*; 4, *M. umbrellata*. See *Talauma*.

MALACH, an intoxicating liquor made from the

hemp (*Cannabis sativa*).

MALACHADËNTA, Lindley. *Linn.* 20, Or. 1, Nat.

Or. *Orchidaceæ*. This very singular plant was

given to Mr. Bateman by Mr. William Hooper

of Lambeth, who received it from Rio in 1836.

It is a remarkable genus, resembling *Megac-*

linium in some respects, but belonging in reality

to *Vandeeæ*, among which it is marked by the

nearly total absence of the petals, the cirrhat

column, and the soft fleshy cinnamon-coloured

gland, to which a pair of reniform pollen

masses are slightly attached. In this division

of *Orchidaceæ*, it is uncertain where it must

stand; probably other genera still undiscovered

will connect it with the system better than

can at present be done.

clavata . Grn. pur. . 4, S. Epi. 2 Rio Janeiro . 1836

MALACHODËNDRON, *Linn.* From *malachos*,

soft, and *dendron*, a tree. *Linn.* 16, Or. 8,

Nat. Or. *Ternstroemiaceæ*. This fine orna-

mental plant is highly deserving a place in

every garden, on account of its large cream-coloured blossoms. The plant should be kept in the greenhouse, for though sufficiently hardy to stand our winters in the open air, the young shoots often get injured by frost, the summer not being long enough to ripen the wood, or even to flower it in perfection. The best soil for it is peat, mixed with a little loam; and it is readily increased by layers, or cuttings of the ripened wood, in sand, under a glass. See *Stuàrtia*.

ovatum . . . White 7, H. De. T. 8 N. Amer. . 1785

MALÀCHRA, *Linn.* A name under which Pliny

speaks of a Persian tree, which produces a

gum. The name is preserved to designate

plants analogous to mallow, from the simi-

larity of the word *malachra* with that of *ma-*

lache, a mallow. *Linn.* 16, Or. 8, Nat. Or.

Malvaceæ. Annuals of no interest; they re-

quire to be raised in a hothouse, and, when of

sufficient size, to be planted singly into small

pots, and placed among the stove plants. *Syn-*

MALPÍGHIA, Linn. In honour of Marcello Malpighi, once professor of medicine at Pisa, and author of many valuable works on natural history. He died in 1694. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. A genus of interesting plants, some of which, as *M. aquifolia*, *coccifera*, and one or two others, are especially worth the cultivator's care. They thrive well in any light soil, and cuttings of the ripened wood root readily in sand, under a glass, in heat. *M. glabra* is known by the name of Barbadoes Cherry in the British West Indies. It is cultivated in all the West Indian Islands, and in many parts of South America, for its fruit, which is esteemed there, but is much inferior to our cherries. *Synonyme*: 1, *M. puniceifolia*. See *Bunchosia* and *Brysonima*.

MALPÍGHIAÆ, or MALPIGHIADS. Trees and shrubs, some having a climbing habit; many bear very pretty flowers and eatable fruit.

MALTESE MUSHROOM is the *Cynomorium coccineum*.

MÁLUM PÚNICUM is the *Punica Granatum*.

MÁLUS. See *Pyrus Málus*.

MÁLVA, Linn. Altered from the Greek, *malache*, soft, which comes from *malacho*, to soften; in allusion to the emollient qualities of the species. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. This is an extensive genus of plants. The stove and greenhouse kinds grow well in any rich soil, and are very ornamental, especially some of the greenhouse species; they are readily increased by cuttings planted in any light soil, under a glass. Among the most interesting of the hardy herbaceous

species, are *M. moschata*, *Munroana*, and *purpurata*. They should be planted in the flower-border, and increased by divisions of the roots, or by seeds. The annual species should be sown in the open ground, but few of them are worth cultivating. *Synonymes*: 1, *M. alceoides*; 2, *coromandeliana*; 3, *M. scoparia*; 4, *striata*; *M. reflexa*; 5, *Nuttallia malvæflora*; 6, *M. glomerata*, *N. involocrata*. See *Cristaria* and *Sphærolea*.

MALVACEÆ, or MALLOW-WORTS, constitute a large order of well-known plants. The uniform character of them is to abound in mucilage, on which account they are valuable for poultices and other medicinal and domestic uses.

MALVAVISCUS, De Candolle. From *malva*, a mallow, and *viscus*, glue. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. This is a genus of very desirable plants, on account of their rich scarlet flowers. The soil best adapted to them is a mixture of loam and peat, and cuttings root readily in sand, under a glass; these should be taken off as near the stem of the plant as possible, not being so apt to rot as when taken off by the middle of the shoot. None of the leaves should be taken off or shortened above the sand. *Synonymes*: 1, *Achania Malvariscus*; 2, *A. mollis*; 3, *A. pilosa*.

MAMMÆFORM, nipple-formed.

MAMMÆA, Linn. *Mamey* is the aboriginal name of the species. *Linn.* 13, Or. 1, Nat. Or. *Clusiaceæ*. *M. americana* is a tall tree with a thick, spreading, elegant head, somewhat resembling *Magnolia grandiflora*. In the West Indies it is cultivated for the sake of its fruit, which is much esteemed, and is eaten alone, or cut in slices with wine or sugar, or preserved in sugar. It grows freely in sandy loam, and cuttings of the ripened wood, with the leaves not shortened, will root in sand, under a glass, in a moist heat.

africana . White 7, S. Ev. T. 40 Africa . 1823
americana . White 7, S. Ev. T. 60 S. Amer. . 1730

MAMMEE-TREE. See *Mammæa*.

MAMMILLARIA, Haworth. From *mamma*, the nipple; in allusion to the small tubercles. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. This genus contains some very beautiful plants, and all highly-deserving of a place in every collection of plants, on account of their very curious and interesting habit. To grow them well, they require the following treatment:—About the middle of April they should be fresh potted in peat and a little sand mixed, and then plunged in heat, in a pit or frame, where the temperature must be kept from eighty-five to ninety-five degrees, not giving them much water until they have started afresh, and then may be added gentle waterings over head, occasionally in the afternoon; they should be closed early, and air given early in the mornings, and shade during sunshine; by treating them in this manner, they will make an amazing growth in the three following months, when they may be gradually hardened before removing them back to the succulent house; they are increased by offsets, and some of the kinds occasionally produce seeds if fertilised. *Synonymes*: 1, *Cactus ambigua*; 2, *M. densa*; 3, *caudata*; 4, *C. coccinea*; 5, *C. coronata*;

6, *C. depressa*; 7, *M. straminea*; 8, *C. glomerata*; 9, *C. mammillaris*; 10, *C. pusilla*; 11, *C. quadrata*; 12, *C. mammillaris*; 13, *C. solitaria*; 14, *C. spinosa*; 15, *C. stellata*.

MANDAVILLA, *Lindley*. Named after Henry John Mandeville, Esq., H. B. M. Minister at Buenos Ayres, to whom we are indebted for the introduction of this and many interesting plants. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. This very fine climber is remarkable for its deliciously sweet and very beautiful snowy-white flowers. It also blooms most abundantly; but if raised from seeds, like all seedling shrubs, its first stage of growth is more productive of foliage than blossoms. In order to grow the plant to perfection it should be placed out in the border of the conservatory. If cultivated during summer in the open air, or in pots in the greenhouse, it grows freely, but does not flower. After the flowering season is over, the plants should be pruned similarly to vines or other plants which bear their flowers and fruit upon the wood of the same year. It may be propagated by cuttings or seeds, sown in a pit, with a little heat.

MANDIÂNÀ. See *Pyræthrum Mandiâna*.

MANDIÔC. See *Jatropha Manihot* (*Manihot utilissima*).

MANDRÁGORA, *Tournefort*. The English name mandrake is derived from *mandra*, an ox-stall, something relating to cattle, and *agaurus*, cruel; on account of its poisonous effects on cattle when accidentally gathered with their fodder in the countries where the plants abound. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. These plants thrive well in a light soil, in a shaded situation. They can only be increased by seeds. The roots are very apt to rot during winter. *Synonymes*: 1, *Atropa Mandrágora*; 2, *M. officinâlis*; 3, *A. Mandrágora*.

MANGÍFERA, *Linn.* Derived from *mango*, the name of the tree, and *fero*, to bear. *Linn.* 23, Or. 1, Nat. Or. *Anacardiaceæ*. This is a genus of much esteemed tropical fruit trees, thriving well in sandy loam, or a mixture of loam and peat. The species are readily increased by cuttings of the ripened wood planted in sand, under a glass, in heat. Fresh seeds imported from the places of their natural growth, will vegetate freely. Within the tropics, they hardly eat any other fruit besides the Common Mango (*M. indica*) during the hot months; but if wine be not drunk with it, the Mango is apt to throw out boils, which are, however, conducive to health. The fruit of the finest Mangos have a rich sweet-perfumed flavour, accompanied by a grateful acidity. The Mango tree has been cultivated successfully for some years in the garden of his grace the Duke of Devonshire, at Chatsworth, and by the direction of the late Sir Joseph Paxton, it was planted in a prepared border in the old aquatic house, where it grew vigorously, and annually produced fruit. It has now become fully established in this situation, and during the two last years, 1865 and 1866, under the careful management of his grace's gardener, Mr. Taplin, it has borne most abundant crops of well-formed and good-flavoured fruit. *Synonyme*: 1, *Manga doméstica*. See *Buchanania*, *Elæodendron*, and *Spodiâs*.

MÂNGLE. See *Rhizophora Mangle*.

MANGLESIA, *Endl.* In honour of Capt. James Mangles, R.N., and his brother, patrons of botany. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. This genus of plants originally found its way into our gardens in 1839, the *M. glabrata* having been raised from Swan River seeds by Robert Mangles, Esq., of Sunning Hill. They are proteaceous plants, allied to *Grevillea*, with neat-toothed, long-stalked leaves, and very small flowers of no beauty. It is for their foliage alone that they will be cultivated.

MARANTACEÆ, or MARANTS. These plants greatly resemble Ginger-worts (*Zingiberaceæ*) in their habits, but are all destitute of aroma.

To this order belongs arrow-root (*Maranta arundinacea*), the Indian shot (*Canna*), and

other well-known stove herbaceous plants.

MARÁTTIA, Swartz. In honour of J. F. Maratti, of Vallombrosa in Tuscany, a writer upon ferns. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*.

These ornamental ferns grow well in loam and peat, and are increased by dividing the roots, or by seeds.

MARATTIACEÆ. See *Danaceæ*.

MARCESCENT, permanent; when withered not falling off.

MARCEÏA, De Candolle. Named after Dr. Marcet of Geneva, a chemist, who was the author of a curious paper concerning the effect of poisons on plants. *Linn.* 8, Or. 1, Nat. Or. *Melastomaceæ*. Curious little plants, requiring warm greenhouse treatment, and increased by cuttings. A soil composed of one half leaf-mould, one fourth peat, and one fourth sand, seems to suit them best, but they are considered difficult to manage. *Synonyme*: 1, *Rhexia decussata*.

MARCGRÀVIA, *Linn.* In honour of George Marcgrave, a German, who published a Natural History of Brazil in 1718. *Linn.* 3, Or. 1, Nat. Or. *Marcgraviaceæ*. This is a genus of curious shrubby, creeping plants; they are found adhering by their fibres to the trunks of trees, though they are not strictly parasitical. They are well suited for covering the walls or rafters of stoves. They grow in turfy loam and peat; and cuttings root in sand, under a glass, in heat.

coriacea . . . White 5, S. Ev. S. 20 Guiana . . . 1820
picta . . . Green 6, S. Cr. S. 20 Guiana . . . 1827

MARCGRAVIACEÆ, or **MARGRAVIADS**. These are all handsome and very curious shrubs and small trees; they bear curious little pitchers, the purpose of which is not understood.

MARCHÀNTIA, *Corda*. In honour of Nicholas Marchant, a French botanist. *Linn.* 24, Or. 6, Nat. Or. *Marchantiaceæ*. Creeping plants, with green, cellular, fleshy fronds, spreading over the surface of the ground in moist places — *androgyna*, *cónica*, *hemisphærica*, *irrigua*, *polymôrpha*.

MARCHANTIACEÆ, or **LIVER-WORTS**. These are plants of a leathery construction, growing on the ground or on trees in damp shady places in all climates.

MARE'S-TAIL. See *Hippuris*.

MARGARITACEOUS, pearl-bearing.

MARGIN, edge or border.

MARGINATED, having a border.

MARGOSA-TREE. See *Melia Azedarachta*.

MARGYRICARPUS, *Ruiz and Pavon*. From *margin*, a pearl, and *karpos*, a fruit; resemblance to the fruit. *Linn.* 2, Or. 1, Nat. Or. *Sanguisorbaceæ*. This is rather a pretty plant, growing well in sandy peat, and increased by cuttings in sand, under a glass, in heat.

setosus . . . Green . . . 6, S. Ev. S. 2 Peru . . . 1829

MARIÁLVA, *De Candolle*. Named after a Portuguese botanist. *Linn.* 13, Or. 5, Nat. Or. *Clusiaceæ*. This fine tree thrives in a mixture of loam, peat, and sand, and ripened cuttings will grow in sand, under a glass, in heat. *Synonymy*: 1, *Tournefortia guianensis*.

guianensis 1 . . . Green . . . 6, S. Ev. S. 12 Guiana . . . 1827

MARLÁNTHUS, *Link*. Derivation of the word unknown, but Dr. Graham suggests that it may have been dedicated to the Virgin Mary, on account of the pure whiteness of the flowers of the first-discovered species. *Linn.* 5, Or. 1, Nat. Or. *Pittosporaceæ*. Elegant little plants, with long slender branches, bearing a profusion of pleasing blue flowers in dense clusters. They should be trained to wire balloons, or circular-shaped trellis, in preference to rafters; they seem to thrive best in a mixture of loam, heath-mould, and sand, and cuttings of the young wood strike freely in sand. *Synonymy*: 1, *Campylanthura elegans*.

MATH, an old term for crop.
MATHIOLA, R. Brown. In honour of Peter Andrew Mathioli, a famous Italian physician, and author of a commentary on the works of Dioscorides; he died in 1757. *Linn.* 15, Nat. Or. *Brassicacée*. This is a genus of old and well-known inhabitants of the garden. In order to obtain good double *Stock-gilliflowers*, *Brompton* and *Queen-stocks*, choice should be made of such single-flowering plants as grow near many double ones. The seed should be sown in May, and after they have reached two or three inches high, they should be thinned at least nine inches asunder, and the plants taken out may be planted at about the same distance apart in the flower-border; if the following winter be severe, they must be protected by mats, and in the following May and June they will flower beautifully. Desirable double varieties may be propagated by cuttings, which root readily by being planted under a hand-glass, and shaded. To have a succession of the *Annual*, or *Ten-week-stock*, the seed should be sown in February, March, April, and May, and the plants from the May sowing will continue to flower till Christmas. In preserving plants of the *Stock-gilliflower*, and *Ten-week-stock*, for seed, select only such single-flowering plants as have fine-coloured flowers. The biennial and hardy shrubby kinds should be treated in the same manner as the *Stock-gilliflower*, and all the annual kinds in the same way as the *Ten-week-stock*. The greenhouse shrubby species grow best in a mixture of light soil and sand, and cuttings root readily under a glass. Fine double stocks may be planted in pots, and kept in a frame during winter. See *Guettàrda*.

MAURÁNDYA, Jacquin. In honour of Dr. Maurandy, professor of botany at Carthage. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. The species of this genus are very elegant, climbing, evergreen, or herbaceous plants, and are therefore well worthy of a place in every garden. During summer, they will grow and flower abundantly planted against a wall in the open air, or at the bottom of trellis-work; but they require the protection of a greenhouse in winter. A light rich soil suits them, and they are easily increased by young cuttings planted under a glass, or by seeds.

MAXILLARIA, Ruiz and Pavon. So named in consequence of the resemblance between the column and labellum and the jaws or maxillæ of some animal. *Linn.* 20, Or. 1, Nat. Or.

Orchidaceæ. This is an extensive and very elegant genus of plants, all of which are highly deserving of cultivation, either for the beauty or delicious fragrance of the flowers. *M. Steelii* is not only a very remarkable, but a very beautiful plant; the flowers are large, of a fine yellow colour, irregularly spotted with dark purple. This, and several other species, as

M. acicularis, *imbricata*, *racemosa*, and *M. rufescens*, should be grown on wood, on which a little moss should be placed, then the roots of the plant put on that, with a sufficient quantity of moss, and the whole fastened to the wood with some metallic wire. For the culture of the other species, see *Stanhopea*.

Synonymes: 1, *Maxillaria foveata*, *hyacinthina*, *latifolia*, *maculata*; 2, *M. revoluta*; 3, *M. fuscata*; 4, *M. fuscata*. See *Govenia*, *Bifrenaria*, *Côlax*, *Cymbidium*, *Houlletia*, *Lycaste*, *Paphinia*, *Prominea*, *Scuticaria*, *Stanhopea*, and *Warrea*.

MEDIUM. See *Campânula Medium*.

MEDLAR. See *Mespilus*.

MEDLAR-WOOD. See *Myrtus orbiculata*.

MEDŪLLA, the pith of a plant.

MEDUSA'S HEAD. See *Euphōrbia Caput Medusæ* and *Cirrhopetalum Medusæ*.

MEGACARPÆA, De Candolle. From *megas*, great, and *karpas*, a fruit; in allusion to the large pods. *Linn.* 15, Nat. Or. *Brassicaceæ*. This plant grows best in light sandy soil, and may

- readily be increased by seeds. *Synonyme*: 1, *Biscutiella megacarpa*.
lacinia 1. . Yel. 6, H. Her. P. 1 Siberia . 1818
- MEGACLIINIUM**, *Lindley*. From *megas*, large, and *kline*, a bed; in allusion to the broad, sword-shaped bed, or rachis of the flowers. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a most singular genus of plants, the flowers being produced on a rachis, which is upwards of nine inches long. The lip of *M. falcatum* moves up and down with great rapidity, much in the same way as the head of the Chinese images of mandarins. For culture and propagation, see *Stanhopea*.

- MELAGONIUM**. See *Conferva Melagodium*.
- MELALEUCA**, *Linn.* From *melas*, black, and *leukos*, white; because the trunk is black and the branches white. *Linn.* 18, Or. 2, Nat. Or. *Myrtaceæ*. This is a very desirable genus of greenhouse or conservatory plants, on account of the neatness of their foliage, and their splendid flowers. They thrive best in an equal mixture of loam, peat, and sand; and cuttings, if not too ripe, will root readily planted in sand, under a glass. *M. Leucadendron* and *Cajuputi* yield the volatile oil of *Cajuputi*, well known as a powerful sudorific, and a useful external application in chronic rheumatism. *Synonymes*: 1, *M. parviflora*; 2, *M. florida*; 3, *M. imbricata*; 4, *M. canescens*, *M. tomentosa*; 5, *piniperoides*; 6, *M. Cajuputi*; 7, *M. piniperoides*; 8, *M. eparcida*; 9, *M. discolor*. See *Astartea*.

- MELAMPEDIUM**, *Linn.* From *melas*, black, and *pous*, a foot; in allusion to the seeds. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. Uninteresting plants; they require to be sown and treated as other tender annuals. *Synonymes*: 1, *M. ovalifolium*, *Wedelia minor*, *Aleina ovalifolia*, *Dyssodium divaricatum*—*americanum*, hispidum, humile, longifolium, paludosum 1.
- MELAMPYRUM**, *Linn.* From *melas*, black, and *pyros*, wheat. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. Annual weeds, which require to be sown in the open ground—*arvense*, *cristatum*, *memorosum*, *pratense*, *sylvaticum*.
- MELANANTHERA**, *Richard*. From *melas*, black, and *anthera*, an anther; alluding to the colour of the anthers. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Uninteresting plants, growing in any common soil, and increased by divisions and seeds. *Synonymes*: 1, *Calea aspera*; 2, *Bidens nivea*—*deltoida* 1, *hastata* 2, *h. pandurata*.
- MELANANTHON**, dark-flowered.
- MELANCHOLY-THISTLE**. See *Cnicus helenioides*.
- MELANCONIUM**, *Link*. From *melas*, black, and

konis, dust; in allusion to the black dusty appearance of the species. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. These are very minute plants, found on dead branches of trees—*conglomeratum*, *ovatum*.

MELANOCAULON, black-stemmed.

MELANOPSIDIUM, *Cels.* From *melanos*, black, and *psidium*, guava. See *Thileodoxa*.

MELANORRHÆA, *Wallich.* From *melas*, black, and *rheo*, to flow; when wounded it yields a black juice. *Linn.* 23, Or. 2, Nat. Or. *Anacardiaceæ*. This splendid tree attains the height of a hundred feet; it grows in peat and loam, and cuttings of the ripened wood root freely in sand, under a glass, in heat. The varnish of Martaban is obtained from this tree; it is known in that country by the name of *Theet-see*, or *Kheu*, and is extremely dangerous, as the skin, if rubbed with it, inflames, and becomes covered with pimples, which are difficult to heal.

usitatissima. Red . 6, S. Ev. T. 100 E. Ind. . 1829

MELANOSEL. See *Melanoseelinum*.

MELANOSELINUM, *Hoffmannsegg.* From *melas*, black, and *selinum*, parsley. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. This plant grows in any common soil, and is increased by divisions. *Synonyme*: 1, *Selinum decipiens*.

decipiens. . . White 6, H. Her. P. 2 Madeira . 1785

MELANOSTICTA, *De Candolle.* From *melas*, black, and *stictos*, marked; leaves and calyxes marked with black glands. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. A greenhouse shrub, growing about six feet high. A mixture of heath-mould and light loam is the best soil, and increase is effected by division at the roots.

Burchellii. . . Yellow 5, G. Ev. S. 6 C. G. H. . 1816

MELANOXYLON, black-wooded.

MELANTHACEÆ, or **MELANTHS**, are bulbous, tuberous, or fibrous-rooted plants, possessing considerable medicinal properties, and in some cases bearing pretty flowers.

MELANTHERA. See *Melananthera*.

MELANTHIUM, *Linn.* From *melas*, black, and *anthos*, a flower; in allusion to the dusky colour of the flowers. *Linn.* 6, Or. 3, Nat. Or. *Melanthaceæ*. The plants of this genus deserve a place in every collection; for culture and propagation, see *Massonia*. *Synonyme*: *Tulipa Breyiniana*. See *Androcymbium*, *Chamelirium*, *Leimanthium*, *Ornithoglossum*, and *Wurmbea*.

MELASTOMA, *Burmamn.* From *melas*, black, and *stoma*, the mouth; the black berries of some of the species are commonly eaten by children, whose mouths they stain black. *Linn.* 10, Or. 1, Nat. Or. *Melastomaceæ*. These plants are very showy when in flower, especially *M. elongata*; indeed, this plant can hardly be excelled for beauty; in its native habitat its flowers are large, and vary from blue to purple and white. Loam, peat, and sand, mixed, suit all the species best; and cuttings of the young wood root readily planted in pots filled with peat, and placed under a glass, in heat. *Synonymes*: 1, *Osbéckia grandiflora*; 2, *M. malabathrica*. See *Aciditis*, *Charianthus*, *Chidonia*, *Clidemia*, *Medinilla*, *Micnina*, *Osbéckia*, *Oxygysora*, *Pleroma*, *Tocda*, and *Tetrazggia*.

MELASTOMA. See *Pleroma*.

MELASTOMACEÆ, or **MELASTOMADS**. An order of very beautiful shrubs, trees, or herbaceous plants; many bear sweet eatable berries; most of the species deserve cultivation.

MELEAGRIS, freckled, speckled.

MELÆANIA, *Forskahl.* From Mount Melhan, in Arabia Felix, where the original species was first found. *Linn.* 16, Or. 2, Nat. Or. *Sterculiaceæ*. Ornamental trees, growing about twenty feet high. They thrive best in a mixture of sandy loam, and cuttings root readily in the same kind of soil, under a glass, in heat.

MELIA, *Linn.* The Greek name of the manna ash; resemblance in the leaves. *Linn.* 14, Or. 10, Nat. Or. *Meliaceæ*. Fine trees, thriving well in a mixture of loam, peat, and sand; and large cuttings of the ripened wood, with the leaves not shortened, will root in sand, under a glass; those of the stove species in heat. The root of *M. Azedarach* is bitter, and is used as an anthelmintic in North America. The fruit of *M. Azadirachta* is oily, acrid, and bitter, as is also the bark.

MELICÔPE, Forster. From *mel*, honey, and *kope*, a division; in allusion to the honey glands at the base of the ovaries. *Linn.* 8, Or. 1, Nat. Or. *Rutacææ*. An ornamental shrub, growing freely in loam and peat; and cuttings of the young wood root in sand, under a glass.

- ternata . . . White . 6 G. Ev. S. 3 N. Zealand 1822

MELICYTUS, Forst. From *mel*, honey, and *cytos*, a cavity; filaments with a meliferous cavity. *Linn.* 22, Or. 6, Nat. Or. *Flacourtiacææ*. A greenhouse shrub, growing freely in a mixture of loam and heath-mould; and ripened cuttings planted in sand, under a glass, will strike root readily.

- ramiflorus . . . Rose . . 5, G. Ev. S. 3 N. Zealand, 1822

MELILOT. See *Melilotus*.

MELILOTUS, Tournefort. From *mel*, honey, and *lotus*; honey lotus. The plants are similar to the *Lotus*, and are the favourite haunts of bees. *Linn.* 14, Or. 10, Nat. Or. *Fabacææ*. Very few of these plants are worth cultivating except in general collections. *M. arborea* is

readily increased by cuttings. The seeds of the other kinds only require to be sown in the open border in spring. *Synonymes*: 1, *M. alba*; 2, *M. plicata*; 3, *Trifolium Kochianum*; 4, *M. vulgaris*; 5, *Trifolium Melilotus officinalis*; 6, *M. rugulosa*; 7, *M. mauritica*; 8, *M. diffusa*, *officinalis*, *petitpierreana*. See *Medicago*, *Pocockia*, and *Trigonella*.

MELISSOPHYLLUM. See *Melitta Melissophyllum*.

MELITTA, Linn. From *melitta*, a bee; a name synonymous with *Melissa*. *Linn.* 14, Or. 1, Nat. Or. *Lamiacææ*. These are showy plants when in flower, and are, on that account, well fitted for ornamenting flower-borders and shrubberies. They are increased by dividing the roots in spring or autumn. *Synonyme*: 1, *N. grandiflora*.

- MELOCANNA**, *Kæmpfer*. From melon, an apple, and kannā, a reed. *Linn.* 6, Or. 1, Nat. Or. *Graminaceæ*. This species is nearly allied to *Bambusa*; it is readily increased by suckers. *Synonyme*: 1, *Bambusa baccifera*.
 bambusoides 1 Apetal. 7, S. Grass. 15 E. Ind. . 1818
- MELŌCHIA**, *Linn.* Altered from *Melochich*, the Arabic name of *Ōrchorus olitōrius*, which is used in the East as a salad-plant. *Linn.* 16, Or. 2, Nat. Or. *Byttneriaceæ*. Plants of little beauty. Any light rich soil suits them; and cuttings root freely in the same kind of soil, under a glass, in heat. See *Riedlèia*.
 parviflora . Purple 7, S. Ev. S. 1 Caraccas . 1820

MENIŌCUS, *Desfontaines*. From *mene*, the moon, and *okkos*, the eye; supposed to refer to the shape of the seeds. *Linn.* 15, Nat. Or. *Brassicaceæ*. A pretty little annual, well fitted for ornamenting rock-work. The seed may be sown where it is to remain. *Synonyme*: 1, *Alyssum linifolius*.

linifolius 1 . White 6, H. A. $\frac{1}{3}$ Caucasus . 1819

MENISCIUM, *Schreber*. From *meniskos*, a crescent; alluding to the shape of the fructification. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. This is a very elegant genus of ferns. They thrive well in loam and peat, and are increased by dividing the roots, or by seeds. *Synonymes*: 1, *Hemionitis prolifera*; 2, *Polypodium reticulatum*; 3, *Asplenium sorbifolium*.

 triphyllum . Brn. yel. 6, S. Her. P. 2 E. Ind. . 1828

MENISPERMUM, *Linn.* From *mene*, the moon, and *sperma*, a seed; the fruit is kidney or half-moon shaped; whence the English name, Moon-seed. *Linn.* 22, Or. 10, Nat. Or. *Menispermaceæ*. This genus is chiefly composed of hardy plants, well adapted for covering arbours or trellis-work. They grow in any common soil, and may be increased by dividing the roots, or by cuttings planted early in spring in a sheltered situation, or by seeds. *Synonymes*: 1, *M. virginicum*; 2, *Cissampelos smilacina*. See *Cocculus*, *Coscinium*, and *Tiliacora*.

MENZIESIA. See *Phylladocce*.

MEOSCHIUM, *Linn.* 23, Or. 1, Nat. Or. *Gramineae*. A plant of no beauty.—*barbatum*.

MERCURIALIS, *Linn.* After Mercury, who is said to have first discovered the plant. *Linn.* 22, Or. 8, Nat. Or. *Euphorbiaceae*. Weeds of the simplest culture. The juice of *M. perennis* is emetic, while the seed is purgative, and highly dangerous—*ambigua*, *annua*, *elliptica*, *perennis*, *tomentosa*.

MERCURY. See *Mercurialis*.

MERENDERA, *Ramond*. *A name given to *Colchicum* by the Spaniards, and applied to this genus because of its affinity. *Linn.* 6, Or. 3, Nat. Or. *Melanthaceae*. This species thrives well in a light loamy soil, and is readily increased by seeds, or offsets from the bulbs. *Synonymes*: 1, *Bulbocodium trigynum*, *Colchicum caucasicum*. See *Colchicum*.

caucasicum 1	Purple	8, H. Bl. P.	½ Caucasus	1823
--------------	--------	--------------	------------	------

MERIANA. In honour of Maria Sybylla Merian, authoress of a work on insects. *Linn.* 10, Or. 1, Nat. Or. *Melastomaceae*. This is a genus of very beautiful stove plants, which grow freely in sandy peat mixed with a little loam; and cuttings of the half-ripened wood root freely in sand, under a glass, in heat. *Synonymes*: 1, *M. macrantha*, *Schwannia superba*, *Chastenea longifolia*.

coccinea .	Scarlet	6, S. Ev. S.	6 Jamaica	1818

MERIANA. See *Tocayena longiflora*.

MERIANDRA. See *Salvia*.

MERISMA, *Fries*. From *merismos*, a division; because of the branched habit. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceae*. These plants are found in woods and damp places—*cristata*, *fetida*, *f. anthocéphala*, *tuberosa*.

MÉRLE. See *Merulius*.

MÉRSIA. See *Gillisia*.

MERTENSIA, *Roth*. In honour of F. C. Mertens, professor of medicine at Bremen. *Linn.* 23, Or. 1, Nat. Or. *Boraginaceae*. All the species of this genus are highly esteemed by the lovers of border plants for the brilliant colour of their blossoms. *M. maritima* and *parviflora* require

to be grown in pots, in very sandy peat. The other species will grow in common garden soil, though they succeed much better when kept in a peat border; increased by divisions. *Synonymes*: 1, *Pulmonaria dahurica*; 2, *P. denticulata*; 3, *P. lanceolata*; 4, *P. maritima*; 5, *P. paniculata*; 6, *P. parviflora*; 7, *P. Virginica*; 8, *P. sibirica*.

MERTENSIA. See *Glechhonia flabellata*.

MERULUS, *Haller*. From *meta*, a pillar; because of the resemblance in the original fungus *metulus*. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceae*. This is one of the most important of parasitical fungi, being what is called the dry rot, so well known as the pest of wooden constructions—*aurantiacus*, *lachrymans*, *obliquus*, *tremellosus*. See *Agaricus*, and *Cantherellus*.

MESEMBRYACEÆ, or FICOIDÆ: *Mesembryanthemum*, or Fig-marigold, as it is commonly called, gives a fair example of this order; they chiefly grow in hot sandy plains in the countries they inhabit. All are more or less succulent.

MESEMBRYANTHEMUM, *Linn.* From *mescmbria*, mid-day, and *anthemon*, a flower. *Linn.* 12, Or. 2, Nat. Or. *Mesembryaceae*. This beautiful and well-known genus of succulents is very easily cultivated. If they are intended to remain in pots, a light sandy loam will suit them best; but if they are planted out in a dry hot border, they will flower more profusely. Many of the kinds are very beautiful objects for the flower-garden; for this purpose, cuttings should be struck in the autumn, and allowed to remain in the store-pots all winter. A dry pit or frame, where frost is excluded, is sufficient for their protection in winter. Cuttings of the most succulent kinds should be allowed to dry a little after planting before water is given, after which they root readily. *M. edule* is the Hottentot-fig, the leaves of which are eaten. *M. nodiflorum* is used in making Maroquin leather. *Synonymes*: 1, *M. stellatum*; 2, *M. Candollei*; 3, *M. purpurco-croceum*; 4, *M. dimidiatum*; 5, *M. parviflorum*; 6, *M. magnipunctatum*; 7, *M. micranthum*; 8, *M. canescens*; 9, *M. hirsutum*; 10, *M. hispidum*. See *Hymenogyne*.

MESOGLOIA. From *mesos*, middle, and *gloios*, viscid; the spines of the branches are in a solid mass. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. This genus is entirely composed of marine plants. *Synonymes*: 1, *Rivularia verticillata*; 2, *R. vermiculata*—*capillaris*, *coccinea* 1, *Griffithsiana*, *Hudsoni*, *multifida*, *purpurea*, *vermicularis*, *v. coriacea* 2, *virescens*.

MESPILUS, *Linn.* From *mesos*, a half, and *pilos*, a bullet; in allusion to the resemblance the fruit bears to half a bullet. *Linn.* 12, Or. 2, Nat. Or. *Pomaceæ*. The *Mespilus*, or *Medlar*, is a genus of low-growing trees; they are very ornamental, and are therefore worth a place in every shrubbery. Any common soil suits them, and they are readily increased by budding or grafting on the common Hawthorn, or they may be increased by seeds, which do not vegetate till the second year after sowing. *Synonymes*: 1, *M. grandiflora*, *M. Smithii*. See *Amelanchier*, *Cotoneaster*, *Crataegus*, *Eriobotrya*, and *Photinia*.

MESSERSCHMIDTIA, *Linn.* In honour of Dr. Messerschmidt, a German botanist. *Linn.* 5, Or. 1, Nat. Or. *Ehretiaceæ*. These plants are of easy cultivation in loam and peat, and cuttings root readily planted in sand, under a glass. *Synonymes*: 1, *Tournefortia hirsutissima*; 2, *T. laurifolia*; 3, *T. scandens*; 4, *T. volubilis*. See *Tournefortia*.

hirsutissima 1	Grn. yel.	6, S. Ev. T.	10 W. Ind.	1818
laurifolia 2 . .	Yellow	7, S. Ev. Cl.	10 W. Ind.	1819
scandens 3 . .	Grn. yel.	7, S. Ev. Cl.	10 Peru	1816
volubilis 4 . .	Grn. yel.	7, S. Ev. Tw.	10 Jamaica	1752

MESUA, *Linn.* In honour of Mesue, the father and son, two celebrated Arabian physicians and botanists; they resided at Damascus, and flourished in the eighth and ninth centuries. The works of the son were published at Venice in 1581. *Linn.* 16, Or. 7, Nat. Or. *Clusiaceæ*. This tree is well deserving of cultivation on account of its beautiful orange and white sweet-scented flowers, which contrast finely with the dark-green foliage. It attains the

height of fifty feet, and grows best in a mixture of strong loam, peat, and sand. Young plants are commonly obtained from seeds; cuttings will root in sand, under a glass, but not freely. The wood is used for a variety of purposes in the East Indies, being considered harder and more durable than most other Oriental timber. The dried blossoms may be found under the name of *Nagkesur* in every bazaar in India; they are used in medicine, and universally esteemed for their fragrance.

ferrea . . .	White	7, S. Ev. T.	15 E. Ind.	1837

MICROPÉTALON. See *Spergularistrum*.

MICRÒPUS, *Linn.* From *mikros*, small, and *pous*, a foot. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. Uninteresting annuals; the seeds need only be sown in the open ground—*erectus*, *supinus*.

MICRORHÝNCHUS. See *Sonchus*.

MICRÓSERIS, *De Candolle*. From *mikros*, small, and *seris*, succory. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *Synonyme*: *Lepidonèma chilense*.
pygmæa . Yellow . 5, H. A. 4 Chili . 1830

MICROSPÉRMA, *Walp.* From *mikros*, small, and *sperma*, a seed. *Linn.* 18, Or. 2, Nat. Or. *Loasaceæ*. An annual plant, requiring the same treatment as other tender annuals; it will thrive in the open border during the warm summer weather. *Synonyme*: 1, *Eucnàda bartonioides*.

bartonioides 1 . Yellow . 6, F. A. 2 America . 1849

MICROSPÉRUM, small-seeded.

MICROSTÁCHYS. See *Tràgia*.

MICROSTÉPHIUM. See *Osteospermum*.

MICRÓSTYLIS, *Nuttall*. From *mikros*, small, and *stylos*, a column; in allusion to the very small column. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus of plants possessing little to recommend them. The Mexican species should be kept in the greenhouse, and grown in sandy peat; they come up in spring when they flower, after which, the leaves die down, and the plants remain dormant till the following season; they are increased by dividing the roots. *Synonyme*: 1, *Liparis pa-*

rochilus; 2, *Malaxis Porthoni*. See *Pul-tencia*.

MILLEFOLIUM. See *Achillea*.

MILLERIA, *Linn.* In honour of the celebrated Philip Miller, F.R.S., author of the Gardener's Dictionary. *Linn.* 19, Or. 4, Nat. Or. *Asteraceae*. Stove annuals of no beauty. Any common soil suits them—*biflora*, *quinqueflora*. See *Flavaria*.

MILLET. See *Panicum*.

MILLET-GRASS. See *Milium*.

MILLINA, *De Candolle*. Meaning not known. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. For culture, see *Milliera*.

leontopodioides. Yel. 7, H. Her. P. 1 Naples. 1828

MILLINGTONIA, *Roseburgh*. In honour of Sir T. Millington, professor of botany at Oxford. *Linn.* 14, Or. 2, Nat. Or. *Sapindaceae*. An ornamental-growing tree. For culture and propagation, see *Jacaranda*.

simplicifolia. Yel. . 5, S. Ev. T. 20 E. Ind. . 1828

MILLINGTONIACEAE. See *Sapindaceae*.

MILTONIA, *Lindley*. Thus named in compliment to Earl Fitzwilliam, one of the oldest and steadiest friends of Natural Science in this country, and a great lover of *Orchidaceae*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. The flowers of these plants are strikingly handsome; the sepals and petals of *M. spectabilis* are delicate cream-colour, and the labellum, which is very large, is elegantly marked with various shades of purple, deepest towards the base. In *M. candida*, the sepals and petals are yellow-brown, and the labellum pure white, finely marked with pink. In potting these plants, the peat should be raised, for a well-grown, good-sized plant, two or three inches, in the same way as recommended for *Stanhopeas*; and the creeping stems, from which the pseudo-bulbs grow, ought to be entirely on the surface, and if necessary, they may be fastened to the peat with hooked pegs. The best way of propagating the species of this genus is, first, to cut the stem half through, which will cause young plants to be sent out; and, finally, to cut them through a month before dividing. They require a hot part of the house. *Synonymes*: 1, *Cyrtorchilum flavescens*; 2, *Odontoglossum Clowesii*; 3, *Oncidium Russellianum*; 4, *Cyrtorchilum stellatum*; 5, *Macrochilus Fryanus*. See *Brassia*.

MIMOSA, *Adanson*. From *mimos*, a mimic; the leaves of many of the species mimic animal sensibility. *Linn.* 23, Or. 1, Nat. Or. *Fabaceae*. The leaves of several of the species belonging to this genus are more or less sensitive to the touch, but none so much so as *M. pudica*; they are, on that account, well worth cultivating. They grow well in loam and peat, with a little sand; and cuttings of the young wood will root in sand, under a glass. They may also be increased by seeds. See *Acacia*, *Darlingtonia*, *Entada*, *Gagnebina*, *Inga*, *Lagonychium*, *Nephania*, and *Prósopis*.

MIMULUS, *Linn.* From *mimo*, an ape or actor; so named because of the ringent corollas of the species. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceae*. Most of these plants are showy, and worth cultivating, particularly the hardy herbaceous kinds, which are well suited for ornamenting flower-borders; they thrive in any common garden soil, and are readily increased by divisions of the roots, or by seeds. The greenhouse and frame species will grow well in light rich soil, and may be increased by cuttings in the same kind of soil, under a glass. The seeds of the annual kinds may be sown where the plants are intended to remain. The leaves of *M. guttatus* are eatable as salad. *Synonymes*: 1, *M. propinquus*; 2, *M. luteus*;

3, *M. Hodsöni*. See *Leucocarpus* and *Di-placis*.

MINA, *Llave* and *Lexarza*. Named after Don Francisco Xavier Mina, a Mexican minister. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceæ*. A very curious and beautiful plant, used for decoration by the Mexicans. When not in flower it appears like an *Ipomœa* in foliage, and when in flower, if the leaves were removed, it loses all appearance of the order to which it belongs. Its flowers being racemose, and arranged similar to a Borage, the blossoms are at first rich crimson, changing as they open to orange and pale yellow. It requires the same treatment as *Ipomœa*.

lobata . . .	Red yel. 6, G. A. 4	Mexico . 1841

MIDGA. See *Zingiber Midga*.

MIRABILIS, *Linn.* From *mirabilis*, wonderful; alluding to the flowers. *Linn.* 5, Or. 1, Nat. Or. *Nyctaginaceæ*. Few plants make a more handsome appearance when in flower, either in the greenhouse or open border. They grow well in any light rich soil, and are increased by seeds. They may be planted out in the open border in spring, where they will do as well as in the greenhouse; at the approach of winter the roots must be taken up, and kept dry and free from frost.

MITCHÉLLA, *Linn.* In honour of John Mitchell, M.D., a physician in Virginia, who described many Virginian plants. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. This plant grows well in a peat border, or in a pot filled with peat and sand mixed, and placed among alpine plants; it is easily increased by separating the running stems.

repens . . .	White . 6, H. Her. Cr. 1	N. Amer. 1731
--------------	--------------------------	---------------

MITÉLLA, *Linn.* A diminutive of *mitra*, a mitre; the fruit being somewhat mitre-shaped. *Linn.* 10, Or. 2, Nat. Or. *Saxifragaceæ*. The plants of this genus are pretty, and well adapted for the front of flower-borders, or to grow on rock-work. They grow most luxuriantly in peat, and are easily increased by dividing the roots. *Synonyme*: 1, *M. reniformis*.

cordifolia . . .	White . 5, H. Her. P. 1	N. Amer. . 1812
diphylla . . .	White . 4, H. Her. P. 1	N. Amer. . 1731
nuda 1 . . .	White . 7, H. Her. P. 1	N. Amer. . 1758

MITRARIA, Cav. From *mitra*, a mitre; mitre-formed bracts covering the calyx. *Linn.* 14, Or. 2, Nat. Or. *Gesneraceæ*. A very handsome little plant, growing freely in peat, leaf-mould, and loam; it is nearly hardy enough to bear our winters if trained against a wall, but it is best to always keep a stock in the greenhouse. Cuttings grow freely in either sand or soil, under a glass, in heat.

coccinea . . . Scarlet . . . 7, G. Ev. Cl. 6 Chiloe . . 1848

MITRASACME, *Labillardiere*. From *mitra*, a mitre, and *acme*, a point. *Linn.* 4, Or. 1, Nat. Or. *Gentianaceæ*. These plants grow best in about three-parts sandy peat, and one of loam; they may be increased by seeds, which should be sown as soon as possible, and by division.

canescens . . . White . . . 7, G. Her. P. 1/2 N. S. W. 1824
 polymorpha . . . White . . . 6, G. . . A. 1/2 N. S. W. 1826
 serpyllifolia . . . White . . . 7, G. . . A. 1/2 N. S. W. 1826

MITRIFORM, formed like a mitre.

MITRULA, *Fries*. From *mitra*, a mitre. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. These plants are found in wet ditches and fir woods. *Synonymes*: 1, *Ledtia Mitrula*—*Abietis* 1, *minuta*, *uliginosa*.

MNIARUM, *Linn.* From *mnias*, mossy. *Linn.* 1, Or. 2, Nat. Or. *Scleranthaceæ*. This plant grows in sandy peat, and may be increased by seed.

biflorum . . . White . . . 6, G. Her. P. 1/2 N. Zeal. . 1823

MNIUM. See *Zygodon* and *Brjum*.

MOCANERA. See *Visnea Mocanera*.

MOCKER-NUT. See *Juglans tomentosa*.

MOCK-PLANE. See *Acer pseudo-platanus*.

MODÉCCA, *Jacquin*. The East India name of one of the species. *Linn.* 22, Or. 5, Nat. Or. *Passifloraceæ*. These plants somewhat resemble *Passiflora* in habit, but are by no means so handsome. Their culture and propagation are the same.

MOERHINGIA. See *Moerhinga*.

MÉNCHIA, *Ehrh.* In honour of Conrad Mench, Professor of Botany at Marburgh. *Linn.* 4, Or. 3, Nat. Or. *Caryophyllaceæ*. A genus of

but little beauty, may be sown on rock-work, and then be allowed to sow its own seeds, and grow as wild plants. *Synonymes*: 1, *Sagina erecta*, *Ménchia quaternella*; 2, *S. cerastoides*—*glauca* 1, *cerastoides* 2.

MOERHINGIA. In honour of Paul Henry Gerard Moerhing, a German physician and botanical author, 1736. *Linn.* 8, Or. 2, Nat. Or. *Caryophyllaceæ*. Very handsome Alpine plants, well suited for ornamenting rock-work, or to be grown in pots in a mixture of sand, loam, and peat; and increased by dividing the plants at the root.

muscosa . . . Li. purp. 6, H. Her. P. 1/2 S. Eur. . 1775
 sedifolia . . . Wht. sc. . 6, H. Her. P. 1/2 S. Eur. . 1823

MOOPHANES, *Martius*. Name not explained. *Linn.* 5, Or. 1, Nat. Or. *Amarantaceæ*. This species may be successfully grown in sandy loam. *Synonyme*: 1, *Gomphrena braziliensis*.
 virgata . . . Whitish . 9, S. . B. 3 Russia . 1836
 braziliensis 1 White . . 7, S. Ev. S. 2 Brazil . . 1790

MOHAUT. See *Hibiscus arboreus*.

MOHO-MOHO. See *Piper angustifolium*.

MOHOE. See *Hibiscus arboreus*.

MÓHRIA, *Swartz*. In honour of M. Mohr, an eminent botanical writer. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Greenhouse fern.

thurifruga . . Brn. yel. 6, G. Her. P. 1 C. G. H. 1842

MOLDAVIAN BALM. See *Dracocéphalum moldavicum*.

MOLDENHAUËRA, *De Candolle*. In honour of John James Moldenhauer, a botanical author. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. For culture and propagation, see *Hardwickia*.
 floribunda . Yellow . . 5, S. Ev. S. 12 Brazil . . 1828

MOLINEA. See *Cupania*.

MOLINA. See *Baccharis*.

MOLINERIA, *Calladon*. After Ignatio Molineria, director of the botanic garden at Turin. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. This little plant thrives well in peat and loam, and is increased by divisions.

plicata . . . Scar. yel. 8, S. Her. P. 1 Java . . 1820

MOLÍNIA, *Mench*. In honour of J. Molina, a writer upon Chilean plants, in 1782. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Weeds not worth growing in any collection. *Synonyme*: 1, *Mélica cœrulea*—*cœrulea* 1, *depauperata*, *sylvatica*. See *Cupania*.

MÓLLE, soft, pliable.

MÓLLIA. See *Polycarpæa*.

MOLLÛGO, *Linn.* A name applied by Pliny to a plant supposed to be the same as our *Galium Mollugo*; given to this genus because of the resemblance of the species. *Linn.* 3, Or. 3, Nat. Or. *Caryophyllaceæ*. Stove annuals of no beauty. *Synonymes*: 1, *M. dichotoma*; 2, *M. Linkii*—*hirta*, *oppositifolia*, *Schránkii* 1, *triphylla* 2, *verticillata*. See *Pharnaceum*.

MOLLÛGO. See *Galium Mollugo* and *Pharnaceum Mollugo*.

MOLOPOSPÉRMUM, *Koch*. From *molops*, a stripe, and *sperma*, a seed; the fruit has the appearance of being striped. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. This plant grows in any common

soil, and is increased by dividing at the root, or by seeds. *Synonyme*: 1, *Ligusticum peloponesiacum*.

peloponesiacum Pa. yel. 6, Her. P. 4, Switzerl. 1593

MOLTKEA, *Don*. In honour of Count Gadske Moltke, a Danish noble. *Linn*. 5, Or. 1, Nat. Or. *Boraginaceæ*. An elegant plant, well worthy of cultivation. See *Onosma*.

cærulea . . . Blue . . . 4, H. Her. P. 1½ Persia . 1829

MOLUCCA-BALM. See *Moluccella*.

MOLUCCÉLLA, *Linn*. The plants were supposed to be natives of the Molucca Islands. *Linn*. 14, Or. 1, Nat. Or. *Lamiaceæ*. The seed of these plants should be sown on a hotbed in spring, and when the plants are of sufficient size, they may be planted singly into pots, and kept under the glass till the end of May, when they may be planted out in a dry warm border, where they will flower and ripen their seeds freely. See *Chasmônia*.

Marrubiastrum Purple . 7, H. A. 1 Siberia. 1820

tuberosa . . . Pa. pur. 7, H. Tu. P. 2 Tartary 1796

MÔLY. See *Allium Môly*.

MÔMBIN. See *Spôndias*.

MOMORDICA, *Linn*. From *mordeo*, to bite; the seeds have the appearance of being bitten. *Linn*. 21, Or. 10, Nat. Or. *Cucurbitaceæ*. Stove and frame twining annuals and perennials possessing but little beauty—*Balsamina*, *charántia*, *dioica*, *Elatèrium*, *mixta*, *muricata*, *operculata*, *senegalensis*, *tubiflora*, *umbellata*. See *Laffa*.

MONACHANTHUS, *Lindley*. From *monachos*, a monk, and *anthos*, a flower; in allusion to the labellum of *M. viridis*, which is like a cowl; whence the English name of the genus, Monks'-flower. *Linn*. 20, Or. 1, Nat. Or. *Orchidaceæ*. Though not a handsome genus, it is rendered very interesting from the singular form of the flowers. They will grow and flower well when treated as the *Catasetums*. See *Catasetum*.

MONÁCHNE, *Beauvois*. From *monos*, one, and *achne*, a glume. *Linn*. 3, Or. 2, Nat. Or. *Graminaceæ*. A stove annual, not worth cultivating—*unilateralis*.

MONADÉLPHIA. Class 16 in the Linnæan system of Botany.

MONADÉLPHOUS, having the filaments cohering into a tube.

MONADÉNIA. See *Disa*.

MONANDRIA. Class 1 in the Linnæan system of Botany.

MONÁNDROUS, having only one stamen.

MONÁNTHE, *Haworth*. From *monos*, one, and *anthos*, a flower, *Linn*. 11, Or. 7, Nat. Or. *Crassulaceæ*. This may be referred to *Semprevivum* for culture and propagation. *Synonyme*: 1, *Semprevivum monánthos*.

polyphylla 1 . . Red . 8, G. Her. P. ½ Canaries . 1777

MONÁRDA, *Linn*. After N. Monarda, a physician of Seville, in the sixteenth century. *Linn*. 2, Or. 1, Nat. Or. *Lamiaceæ*. These plants are of easy culture, growing well in any common soil, and readily increased by dividing the roots. *M. aristata* and *M. punctata* should be grown in pots, in a mixture of peat and sand. *Synonymes*: 1, *M. citriodora*; 2, *M. Kalmiana*; 3, *M. affinis*, *M. altissima*, *M. media*, *M. oblongata*, *M. purpurea*, *M. rugosa*; 4, *M. menthaefolia*; 5, *M. mollis*. See *Blephilia*.

MONARDÉLLA, *Benth*. Diminutive of *Monarda*.

Linn. 14, Or. 1, Nat. Or. *Lamiaceæ*. See *Pycnanthemum*.

MONÈMA, *Greville*. From *monos*, one, and *nema*, a filament; filaments simple. *Linn*. 24, Or. 7, Nat. Or. *Diatomaceæ*. These plants are only to be found in the sea—*apiculatum*, *Dillwynii*, *obtusum*, *quadripunctatum*.

MONÈRMA, *Beauvois*. From *monos*, one, and *herma*, a support. *Linn*. 1, Or. 2, Nat. Or. *Graminaceæ*. A curious species, growing in any soil, and increased by seeds. *Synonymes*. 1, *Psillurus nardoides*, *Rotboellia monandra*. See *Ophiurus*.

monandrum 1 . . . Apetal 7, H. Grass ½ Spain . 1804

MONÈSES. See *Pyrola*.

MONÈTIA, *L'Heritier*. In honour of Monet de la Marek, a famous French botanist. *Linn*. 4, Or. 1, Nat. Or. *Aquifoliaceæ*. An ornamental shrub, growing about three feet high, and succeeding in loam and peat, and readily increased by cuttings in sand, under a glass, in a little bottom heat. *Synonyme*: 1, *Azima tetracantha*.

barlerioides 1 . . . Green . 7, S. Ev. S. ¾ E. Ind. . 1758

MONEYWORT. See *Dioscorea nummularia*.

MONEYWORT. See *Lysimachia nummularia*.

MONEYWORT. See *Taverniera nummularia*.

MONÍLIA, *Persoon*. From *monile*, a necklace; the filaments are articulated. *Linn*. 24, Or. 9, Nat. Or. *Botrytaceæ*. This fungus is found in autumn on dead wood—*antennata*.

MONILIFORM, formed like a necklace; that is to say, with alternate swellings and contractions, resembling a string of beads.

MONIMÍACEÆ, or **MONIMIADS**. Aromatic trees and shrubs, not much unlike *Lauraceæ*; they are chiefly found in South American forests, where they are used for various domestic purposes by the natives.

MONKEY'S-BREAD. See *Adansonia digitata*.
MONKEY'S-CUPS. See *Nepenthes distillatoria*, and other species.

MONKEY-FLOWER. See *Mimulus*.

MONKEY'S-PORRIDGE-POT. See *Lécythis ollaria*, and *L. minor*.

MONKEY'S-DINNER-BELL. See *Hura crépitans*.

MONK'S-HOOD. See *Aconitum*.

MONK'S-HOOD. See *Dielytra cucullaria*.

MONK'S RHUBARB. See *Rumex alpinum*.

MONNIÈRE, Aublet. In honour of William le Monnier, once professor of botany in the Jardin du Roi, at Paris. *Linn.* 17, Or. 1, Nat. Or. *Rutaceæ*. A stove annual, of no beauty—*trifolia*.

MONNINA, Ruiz and Pavon. In honour of Monnino, Count de Florida Blanca, a Spanish promoter of botany. *Linn.* 17, Or. 3, Nat. Or. *Polygalaceæ*. An ornamental shrub, growing in peat and loam, and increased by cuttings or seed.

crocalarioides . Black . 8, G. Ev. Cl. 2, Peru . 1810
obtusifolia . Red . 6, G. Ev. S. 2, Peru . 1830

MONOCERA, Jack. See *Dicera*.

MONOCHÆTUM. See *Arthrostemma*.

MONOCHILUS, Fischer and Meyer. Derived from *monos*, one, and *cheilos*, a lip; alluding to the flower. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. A pretty plant, growing in a mixture of light loam, peat, and sand, and thriving well if treated like other tuberous stove plants.

gloxinifolius . . . S. Tu. P. . 1838

MONOCHLAMYDÆ. A large division in botany, consisting of plants that have only one envelope in the flower; from *monos*, one, and *chlumys*, a coat.

MONOCOTYLEDONOUS, having only one seed-leaf or cotyledon.

MONODORA, Dumont. From *monos*, one, and *dora*, a skin; in allusion to the fruit being one-celled. *Linn.* 13, Or. 6, Nat. Or. *Anonaceæ*. This plant thrives in a light sandy loam; and ripened cuttings root in sand, under a glass, in a moist heat. *Synonyme*: 1, *Andra Myristica*.

Myristica 1 . Yel. red 5, S. Ev. S. 20 Jamaica . 1843

MONOCÉIA. The twenty-first class of the Linnæan system of Botany.

MONŒCIOUS, having the one sex in one flower, and the other in another, on the same plant.

MONOGRAMMA, Sch. From *monos*, one, and *gramma*, a writing. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. *Synonymes*: 1, *Grámmitis furcata*; 2, *G. trichoides*.

furcata 1 . Brn. yel. 6, S. Her. P. 1 Trinidad . 1825
graminea . Brn. yel. 6, S. Her. P. 1 W. Indies 1830
trichoides 2 . Brn. yel. 6, S. Her. P. 1 W. Indies 1830

MONOGYNIA. Order one of the Linnæan system of botany.

MONOLŒPIA, De Candolle. From *monolopus*, a single covering; structure of involucre. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A showy hardy annual, bearing bright yellow flowers. It continues to blossom during summer, and is increased by seeds. *Synonyme*: 1, *Helénium Douglassii*.

majör 1 . Yellow . 7, H. A. 3 California . 1834

MONOMERIA, Lindl. From *monos*, one, and *meris*, a part. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. For culture, see *Epidéndrum*.

barbata . . . Spotted . 5, S. Epi. 1 India . 1841
nitida . . . Yel. pk. . 6, S. Epi. 1 Mexico . 1841

MONOPÉTALOUS, having only one petal.

MONÓPSIS, Salisbury. From *monos*, one, and *opsis*, a face; the flowers are regular, not bilabiate. *Linn.* 5, Or. 1, Nat. Or. *Lobeliaceæ*.

M. conspicua deserves a place in every garden because of its neat, elegant, deep-blue flowers. The seeds should be raised on a hot-bed, and when the plants are about an inch high, planted singly into pots, in a mixture of peat and sand; or they may be planted out in a sheltered situation in the open border in May. *Synonyme*: 1, *Lobelia spéculum*.

conspicua 1 . Blue . 7, H. A. $\frac{1}{2}$ C. G. H. . 1812
inconspicua . purp. . 7, H. A. $\frac{1}{2}$ C. G. H. . 1812

MONOSEPALOUS, having only one sepal.

MONOSTACHYA, one-spiked.

MONOTAXIS, Brongniart. From *monos*, one, and *taxis*, a series; in allusion to the male and female flowers. *Linn.* 21, Or. 2, Nat. Or. *Euphorbiaceæ*.

simplex . . Green . 7, G. Ev. S. 3 N. Holl. . 1842

MONÓTOCA, R. Brown. From *monos*, one, and *tokos*, a birth; the fruit is one-seeded. *Linn.* 5, Or. 1, Nat. Or. *Epaeridaceæ*. Very elegant plants; for culture and propagation, see *Leucopogon*. The pots must be well drained with potsherds. *Synonyme*: 1, *Styphelia glauca*.

alba . . . White . 6, G. Ev. S. 6 N. S. W. . 1824
elliptica . . White . 6, G. Ev. S. 6 N. S. W. . 1802

MONTAGNÆA. See *Montanda*.

MONTANDA, *La Lave*. After Montanoa, a Mexican patriot. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. Greenhouse shrubs of no beauty, growing in any common soil, and increased by cuttings—*grandiflora*, *tomentosa*.

MONTEZUMA. Named by Mocino and Sesse, two Mexican botanists, in honour of Montezuma, a sovereign of Mexico. *Linn.* 16, Or. 7, Nat. Or. *Sterculiaceæ*. An ornamental, large-growing tree; loam and peat suit it best, and cuttings of the half-ripened wood will root in sand, plunged in heat.

speciosissima . Red . . 6, S. Ev. T. 30 Mexico 1827

MONTIA, *Linn.* In honour of Joseph Monti, Ph. D., professor of botany, and a botanical author, 1791. *Linn.* 3, Or. 3, Nat. Or. *Portulacææ*. This genus is nearly akin to *Claytonia*. The plants are well-known British aquatics—*fontana*, *rivularis*.

MONTINIA, *Linn.* In honour of Laurence Montin, a Swedish botanist. *Linn.* 22, Or. 4, Nat. Or. *Onagræææ*. This genus is not possessed of much beauty; it thrives well in peat and loam, and is increased by cuttings.

caryophyllæa . White 7, G. Ev. S. 1 C. G. H. 1774
odorata . . . White 8, G. Ev. Tw. 1 Buen. A. 1838

MORCHEL. See *Morchella*.

MORCHELLA, *Dillwyn*. Derived from *morchel*, the German name of the plant. *Linn.* 24, Or.

9, Nat. Or. *Helvellæææ*. A genus of eatable fungi, found upon the ground—*esculenta*, *e. rotunda*, *e. vulgaris*, *hybrida*, *pátula*.

MORDANT, that which enables matter to receive dyes or colouring matter, and to retain them.

MOREL. See *Morchella*.

MORENOA, *La Lave*. In honour of P. Moreno, a Mexican patriot. *Linn.* 5, Or. 1, Nat. Or. *Convolvulæææ*. Ornamental plants, growing in a mixture of peat and loam; and cuttings root readily in sand, under a glass, in heat. *Synonyme*: 1, *Calbda globosa*.

MORINGA, *Burmamn*. *Muringo* is the name of the species in Malabar. *Linn.* 10, Or. 1, Nat. Or. *Moringæææ*. *M. pterygospërma* thrives well in light loamy soil, and cuttings root freely in sand, under a glass, in heat. The young roots of this tree are scraped, and used by the inhabitants of the places of its natural growth as horse-radish in Europe, having much the same sharp taste. *Synonyme*: 1, *Hyperánthera Moringa*.

MORINGIÆÆ, or MORINGIADS. These are a small group of very curious little trees, not unlike plants belonging to *Fabæææ*, but in some of their characters are very distinct.

MORISIA, *Cassini*. In honour of Professor Moris, who discovered the species. *Linn.* 15, Nat. Or. *Brassicæææ*. This plant is well fitted for

ornamenting rock-work, where its bright yellow flowers contrast well with its deep-green polished leaves; it is increased by seed sown as soon as ripe. See *Erucaria*.

hypogæa . Yellow . 5, H. Her. P. $\frac{1}{2}$ Sardinia . 1833

MORISÏONIA, *Plumier*. In honour of Robert Morison, a Scotchman, professor of botany at Oxford, who died in 1683. *Linn.* 16, Or. 8, Nat. Or. *Capparidaceæ*. An ornamental plant, which grows well in a mixture of loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in a gentle heat. *Synonyme*: 1, *Cápparis Morisóni*.

americana 1 . White . S. Ev. T. 12 W. Indies . 1824

MORMODES, *Lindley*. From *mormo*, a frightful-looking object, a goblin; in allusion to the strange appearance of the flowers. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These are very singular plants when in flower. For culture and propagation, see *Catasètum*. *Synonymes*: 1, *M. atropurpurea*; 2, *M. igneum, macranthum*; 3, *Cyclòsia maculata, Catasètum citrinum*; 4, *Catasètum Russellianum*.

MORNA, *Lindley*. Morna, a heroine of Northern romances. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. This is a genus of very beautiful plants, well deserving of cultivation. They are half-hardy annuals, and may be had to flower in the greenhouse from May to the end of August, if sown at two different seasons. Plants intended to flower in May should be sown the preceding September, and plants for autumn flowering should be sown in February. The seeds should be sown in pots, in sandy peat and leaf-mould, and placed in the greenhouse; the young plants should be potted off when small into sixties, two plants in each pot close to the side, shifting them into larger ones as they require it, keeping them near the glass in a dry, airy part of the house. They must be very cautiously watered, as too much or too little will, in a few hours, destroy the healthiest plants; the pots should therefore be well drained, and the plants should not receive too great a shift at any time. If they are intended to flower in the open border, the plants must not be planted out before the end of May, as the least frost kills them.

MORONOBÆA, *Aublet*. From *Moronobo*, the native name, *Linn.* 18, Or. 4, Nat. Or. *Crusiaceæ*. It is a beautiful tree, thriving in a mixture of sandy loam and peat. It is propagated by cuttings of the ripened wood, planted thinly in sand, under a glass, in heat. *Synonyme*: 1, *Symphonia globuliflora*.

coceinea 1 . Scarlet . 5, S. Ev. S. 20 Guiana . 1825

MORPHIA. A crystallised salt found in opium.

MORPHIXIA. See *Ixia*.

MORRËNIA, *Lindley*. In honour of Professor Charles Morren, of Liège, one of the most distinguished botanists and vegetable anatomists of his day. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. This is a very curious little plant, requiring the same treatment as the greenhouse species of *Cynanchrum*.

odorata . Green . 7, G. Tw. 3, B. Ayres . 1837

MORUS, *Linn.* From the Celtic word *mor*, signifying black; in allusion to the colour of the fruit. *Linn.* 21, Or. 4, Nat. Or. *Moraceæ*. The species of *Morus* or Mulberry, grow from ten to thirty feet high. Moist situations and a loamy soil suit them best. *M. nigra* is in general cultivation for the sake of its fruit, which is well known. *M. alba* is extensively cultivated as food for silk-worms. *Synonymes*: 1, *M. sinensis*; 2, *M. pumila, M. nana*; 3, *M. alba ovalifolia*; 4, *M. sinensis*; 5, *M. pennsylvanica*. See *Broussonetia*, and *Maclura*.

MURUMURI. See *Astrocaryum Murumuri*.

MUSA, *Linn.* Altered from the Egyptian Mauz, in honour of Antonius Musa. *Linn.* 5, Or. 1, Nat. Or. *Musacææ*. To this genus belong those universally-esteemed fruits the *Banana* and *Plantain*, but from these plants growing to twenty-five or thirty feet high, they are rarely seen in perfection in this country on account of the quantity of room required; but the valuable species, *M. Cavendishii*, does not grow more than four or five feet high, so that any one possessing a moderate-sized house may, with a very little trouble, be rewarded by abundance of its excellent fruit. They all thrive best in a rich soil, requiring plenty of room and moisture; they are increased by suckers, which the old plants produce in abundance. It is considered that no known plant produces anything like the same quantity of nutriment from the same space of ground, as the *Banana*. It is indigenous to all the tropics, and amongst the numerous uses to which it is applied we may mention the following. The tops of the young plants are eaten as a delicate vegetable; the fermented juice of the trunks produces an agreeable wine. The fruit is served up both raw and stewed; slices fried are also considered a delicacy; and, finally, the leaves are used for thatching and basket-making. *Synonyme*: 1, *Ensèle Anseléti*.

MUSÁCEE, or MUSADS. To this fine fruit-bearing order belongs the banana and the plantain. Some also bear beautiful flowers; all deserve cultivation.

MUSCÆLES constitute a large division of flowerless plants, comprising six orders.

MUSCARI, Desfontaines. From *moschos*, musk; smell of the flowers. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Some of the species of this genus are very handsome, and should be planted near the front of flower-beds or borders; they thrive well in sandy loam, and are readily increased by offsets from the bulbs. *Synonymes*: 1, *M. moschatum, flavum*; 2, *Hyacinthus moschatus*.

MYAGRUM, Tournefort. From *myia*, a fly, and *agra*, capture; an ancient plant was so named from its properties of catching flies. *Linn.* 15, Nat. Or. *Brassicaceæ*. The seed of this pretty annual has only to be sown in the open ground. See *Calepina*, *Camelina*, *Cochlearia*, *Dithymis*, *Neslia*, and *Rapistrum*.

perfoliatum . Pa. yel. . 6, H. A. 1/2 France 1648

MYANTHUS, Lindley. From *myia*, a fly; when the flowers are dried they look very much like a fly pressed flat. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a very curious genus of plants, and, like other plants of a similar habit, they are easily cultivated, provided they are placed in a cool house and kept dry for some months, and afterwards vigorously forced in the same manner as the *Catasetums*. *Synonyme*: 1, *Catasetum trifidum*. See *Catasetum finbriatum*, *Lansbergii*, and several others.

uragoga . . .	Purple . . .	8, S. Ev. S. 4	S. Amer. . .	1790

MYLOCARTUM, Willdenow. From *myle*, mill, and *karyon*, a nut; the seeds have four wings. *Linn.* 10, Or. 1, Nat. Or. *Celastraceæ*. An ornamental species, with the habit of *Andrœmeda*; it may be successfully grown in loam and peat, and cuttings will root in sand, under a glass. *Synonyme*: 1, *Cliftonia ligustrina*.

ligustrinum 1 White . 5, F. Ev. S. 6 Georgia .

MYOPORACEÆ, or MYOPORADS, are little smooth shrubs, scarcely known in cultivation. The white mangrove (*Avicennia*) belongs to this order.

MYOPORUM, Banks. From *myo*, to shut, and *poros*, a pore; in reference to the leaves. *Linn.* 14, Or. 2, Nat. Or. *Myoporaceæ*. Pretty shrubs, delighting in a mixture of loam and peat; and

cuttings will root readily in sand, under a glass. *Synonymes*: 1, *Pogonia glabra*; 2, *P. tetrandra*.

MYOSERIS, *Link.* From *mys*, a mouse, and *seris*, succory. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. This species will grow in any common soil, and is increased by divisions. *Synonyme*: 1, *Borkarsia purpurea*.

purpurea . Purple . 5, H. Her. P. 1½ *Tauria* . 1824

MYOSOTIS, *Linn.* From *mys*, *myos*, a mouse, and *otos*, an ear; fancied resemblance in the leaves. *Linn.* 5, Or. 1, Nat. Or. *Boraginææ*. All the perennial species of this genus are very beautiful, especially *M. palustris*, the Forget-me-not. They grow best in moist places, or by the edges of ponds or ditches; they may also be grown in pots among alpine plants. The annual species like a dry sandy soil. Most of the perennial species may be increased by divisions of the roots, and all by seeds. *Synonymes*: 1, *M. lithospermifolia*, *M. rupicola*, *M. suaveolens*. See *Anchusa*, *Echinosperrum*, and *Heliotropium*.

MYRICÆÆ, or **SWEET GALES**. These are little aromatic trees and shrubs; some species, as the *Myrica cerifera*, supply a deal of wax, which is used for candles, and others are used in medicine.

MYRICARIA, *Desvaux*. From *myrike*, the Greek name of the tamarisk. *Linn.* 16, Or. 5, Nat. Or. *Tamaricææ*. A genus of tall ornamental shrubs, requiring the same treatment as *Tamarix*. *Synonymes*: 1, *Tamarix dahurica*; 2, *T. germanica*.

dahurica 1 . . . Pink . 7, H. Ev. S. 6 *Dahuria* . 1816

germanica 2 . . . Pink . 7, H. Ev. S. 6 *Germany* . 1852

MYRIOCOCUM, *Fries*. From *myrios*, a myriad, and *kokkos*, a berry. *Linn.* 24, Or. 9, Nat. Or. *Mucorææ*. Found upon dead leaves in the spring—*præcox*.

MYRIONEMA, *Greville*. From *myrios*, a myriad, and *nema*, a filament. *Linn.* 24, Or. 7, Nat. Or. *Fucææ*. This species is only to be met with in the sea—*stragulære*.

MYRIÓGYNE, *De Candolle*. See *Grægea*.

MYRIOPHYLUM, *Linn.* From *myrios*, a myriad, and *phyllon*, a leaf; division of the leaves. *Linn.* 21, Or. 9, Nat. Or. *Onagraceæ*. Aquatics of some beauty, and common culture.

pectinatum . Rose . 7, H. Her. Aq. 1 Europe . 1828
spicatum . Red . 7, H. Aq. P. 1 Brit., ditches.
verticillatum . Green . 7, H. Aq. P. 1 Eng., ditches.

MYRIOTRÍCHIA, *Harvey*. From *myrios*, myriad, and *thrix*, a hair; alluding to the filaments. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. A minute olive-coloured species, found growing on *Chorda lomentosa*—*clavæformis*.

MYRÍSTICA, *Linn.* From *myristikos*, sweet-smelling; odour of the fruit. The well-known Nutmeg. *Linn.* 22, Or. 13, Nat. Or. *Myristicaceæ*. These very interesting plants are seldom to be met with in this country, and are considered difficult to cultivate. A sandy loam suits them best, and cuttings of the ripened wood planted in sand, and placed under a glass, in a moist bottom heat, root freely, and the plants thrive better than imported ones. *Synonymes*: 1, *M. officinalis*, *aromatica*; 2, *Virôla sebifera*.

fátua . . . Gn. wht. 6, S. Ev. T. 25 Surinam . 1812
moschata 1 . Payel. . 6, S. Ev. T. 25 E. Ind. . 1795
sebifera 2 . Yel. grn. 6, S. Ev. S. 10 Guiana .

MYRISTICÆÆ, or NUTMEGS. Everyone is acquainted with the Nutmeg (*Myristica moschata*), and the mace, which is the envelope surrounding the nut. This tree may be considered a fair type of the order.

MYROBALAN PLUM. See *Prunus domestica myrobalana*.

MYROBALANUS. See *Spéndias lutea* and *Terminalia Patéca*.

MYRÒDIA, *Sweet*. From *myron*, fragrant balsam, and *osme*, a smell. *Linn.* 16, Or. 8, Nat. Or. *Sterculiaceæ*. This plant prefers a light rich soil; and cuttings will root in sand, under a glass.

turbinata . . White . 5, S. Ev. S. 6 W. Ind. . 1793

MYRÒSMA. See *Phgrium Myròsma*.

MYROSPERMUM, *Jacquin*. From *myron*, myrrh, and *sperma*, a seed; the seeds and cells yield a balsam, which has a strong smell. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. *M. toluiferum* is a lofty-growing tree, and both species thrive well in equal portions of loam and peat; and young cuttings will root in sand, under a glass, in heat. See *Myròxylon*.

toluiferum . Rose 5, S. Ev. T. 40 S. Amer. .
frutescens . Rose 5, S. Ev. S. 6 Caraccas . 1824

MYROTHERIUM, *Tode*. From *myro*, to distil, and *theca*, thecium. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdaceæ*. This plant is found on rotten bog matter—*Carmichaelia*.

MYRÓXYLON, *Kunth*. From *myron*, myrrh, and *xylon*, wood; wood sweet-scented. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. This genus of fragrant wooded plants is highly deserving of a place in every stove. *M. peruiferum* is a beautiful tree, growing forty feet or more high, and produces the drug called Balsam of Peru, and *M. toluiferum* produces the Balsam of Tolu. They all grow freely in a mixture of peat and

loam, and cuttings of the young wood root in sand, under a glass, in heat. *Synonyme*: 1, *Myrospærum toluiferum*.

peruiferum . White . S. Ev. T. 40 Peru . . 1824
pubescens . White . S. Ev. T. 40 Carthagenia 1820
toluiferum 1 . White . S. Ev. T. 40 S. Amer. .

MYRRH OF BRITAIN. See *Mýrrhis*.

MYRRH OF COMMERCE is the gum resin issuing from *Balsamodendron Mýrrha*.

MYRRHIS, *Scopoli*. From *myron*, perfume, or *myrrha*, myrrh; scent of plant. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Formerly this plant was used in a variety of ways, but it has disappeared from our tables a long time ago. Any common soil suits it, and it is readily increased by seeds, or dividing at the root. See *Cherophyllum*.

odorata . White . 5, H. Her. P. 2 Brit., hedge bks.

MYRSINÆÆ, or ARDISIADS. An order of handsome shrubs and trees; their properties are little known.

MYRSINE, *Linn.* The Greek name of *myrrh*. *Linn.* 23, Or. 2, Nat. Or. *Myrsinaceæ*. These plants grow freely in a mixture of loam, peat, and sand; and cuttings, if not too ripe, root in sand, under a glass, in a little heat. *Synonymes*: 1, *M. retusa*; 2, *Mangilla canariensis*; 3, *Sideroxylon melanophloeum*; 4, *Mangilla Milleriana*; 5, *Sámará pentandra*. See *Ardisia* and *Mangilla*.

MYRSINITES. See *Euphorbia Myrsinides*.

MYRSIPHYLUM, *Willdenow*. From *myrsine*, a myrtle, and *phyllon*, a leaf; resemblance of the leaves. *Linn.* 6, Or. 3, Nat. Or. *Liliaceæ*. A genus of pretty twining plants, thriving well in sandy loam and peat, and readily multiplied by dividing at the root. *Synonyme*: 1, *Meddola asparagoides*.

angustifolium . Gn. wt. 7, G. De. Tw. 6 C. G. H. 1752
asparagoides 1 . Gn. wt. 6, G. De. Tw. 6 C. G. H. 1702

MYRTÆÆ or MYRTLE-BLOOMS. To this order belongs the myrtle (*Mýrtus*), the pomegranate (*Punica*), the rose-apple (*Jambôsa*), the guava (*Psidium*), the jamboselle (*Nélitris*), the clove (*Caryophyllus*), the clove-pepper (*Pimenta*), and many plants of the most beautiful character as regards flowers. All deserve cultivation.

MYRTALES are a large botanical division comprising ten orders of beautiful flowering and fruit-bearing plants.

MYRTILLA or MURTILLA. See *Eugenia Ugni*.

MYRTILLUS. See *Vaccinium Myrtillus*.

MYRTLE. See *Mýrtus*.

MYRTLE BILBERRY. See *Vaccinium Myrtillus*.

MÝRTUS, *Linn.* From *myron*, perfume; *myrtos*

of the Greeks; *myrtus* of the Dutch, and of almost every other European language. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. The Myrtle is a favourite and well-known genus of plants, which grow well in sandy loam and peat; and cuttings, if not too ripe, will root freely either in sand or soil, under a glass. *Synonymes*: 1, *Jossinia orbiculata*, *Eugenia orbiculata*; 2, *Jossinia melastomoides*. See *Eugenia*, *Mjrcia*, *Olynthia*, and *Pimenta*.

MYXA. See *Cordia Mjza*.

MYXOTRICHUM, Kunze. From *myxa*, gluten, and *trich*, a hair; filaments. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. This species is found on rotten branches—*cæsium*.

N.

NABALUS, *De Candolle*. Meaning unknown. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*.

Plants of easy culture in the open borders, and propagated by division. *Synonymes*: 1, *Prenanthes cordata*; 2, *P. racemosa*; 3, *P. virgata*.

NABK. See *Zizyphus Lötus*.

NÆGELIA. See *Achimenes*.

NÆMÁSFORA, *Persoon*. From *nema*, a thread, and *spora*, a spore. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Very minute plants, found on dead branches of Hornbeam, &c.—*carpini*, *cræceæ*, *filamentosa*, *Röse*.

NÆMATÆLIA, *Fries*. From *naima*, gelatine, and *ello*, to contain; in allusion to the nucleus in the receptacle. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. A curious flesh-coloured species, growing on partially decayed pine-wood—*en-céphala*.

NÆMATOSTÍGMA. See *Libertia*.

NAGËIA, *Gertner*. From *Nagi*, the Japanese name of the plant. *Linn.* 22, Or. 4, Nat. Or. *Myricaceæ*. Plants of no great beauty, growing best in a good rich loam; and cuttings of the ripened wood root in sand, under a glass, in a strong heat.

cuspidata . .	Apetal 3, F. Ev. S. 10 Japan . .	1812
japonica . .	Apetal 2, G. Ev. S. 6 Japan . .	1812
Putrañjiva .	Apetal 3, S. Ev. S. 10 E. Ind. . .	1822

NAGËLIA, *Lindley*. After M. Nageli, the fellow-worker of Schleiden in botanical investigation. *Linn.* 12, Or. 2, Nat. Or. *Pomaceæ*. A genus founded on a plant separated from *Cotoneaster*. *Synonyme*: *Cotoneaster denticulata*.

denticulata 1 .	White 5, H. Ev. S. 4 Nepal? . .	
-----------------	---------------------------------	--

NAGHEL. See *Caryophyllus aromaticus*.

NAGKESUR. See *Mesua ferrea*.

NAGLA-RAGEE. See *Eleusine coracina*.

NAGUR-MOOTH. See *Cyperus pertenuis*.

NAIADACEÆ, or NAIADS, are small water-

plants inhabiting both the ocean and our brooks and rivers. They do not possess beauty, and are therefore scarcely worth cultivating.

NAIN FLAGOLET. See *Phaseolus tumidus*.

NAJAS, *Linn.* From *naias*, a water-nymph; on account of the habitation of the plant. *Linn.* 21, Or. 5, Nat. Or. *Naiadaceæ*. A curious plant, of very simple culture. *Synonyme*: 1, *monosperma*.

majior 1 . .	Rose . 7, H. Aq. A. ½ Europe . .	1816
--------------	----------------------------------	------

NAKED, without hairs, leaves, or branches, &c.

NAKED-BARLEY. See *Hordeum cælestæ*.

NAKED-OAT. See *Avèna nuda*.

NAKEDISH, nearly destitute of hairs, leaves, &c.
 NAMA, *Don*. From *nama*, a stream of water; habitat of plants. *Linn.* 5, Or. 2, Nat. Or. *Hydroleaceæ*. Pretty plants, growing in a mixture of peat and sandy loam, and increased by seeds and division of the roots.

jamaicensis .	Wht. bl. 6, S. . .	A. 1 Jamaica .	1812
undulata . .	Violet . 6, G. Her. P. 1 Mexico .	1826	

NANANTHÆA, *De Candolle*. See *Chrysanthemum*.

NANDINA, *Thunberg*. *Nandin*, or *Nand-scofk*, is the name of the shrub in Japan. *Linn.* 6, Or. 2, Nat. Or. *Berberidaceæ*. This is a handsome plant, growing in a mixture of loam and peat; and ripened cuttings will root in sand, under a glass, provided the leaves are not shortened.

domestica . .	Grn. brn. 7, G. Ev. S. 6 China . .	1804
---------------	------------------------------------	------

NANODES, *Lindley*. From *nanodes*, pigmy; in allusion to the small size of both plant and flowers. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is among the most curious of orchidaceous plants; its flowers are completely embosomed by the leaves, and so similar in colour, that it would scarcely be observed to be in flower, even if every branch were blossoming. It is rather difficult to cultivate, but will be found to succeed best treated after the manner of *Burlingtonia*.

discolor . .	Purplish. gn. 8, S. Epi. ½ Brazil . .	1827
--------------	---------------------------------------	------

NAPÆA. See *Sida*.

NAPÉLLUS. See *Aconitum Napéllus*.

NAPHA WATER is a perfume distilled from orange flowers.

NAPIFORM, formed like a turnip, tuberous.

NAPOLEON'S WEEPING WILLOW. See *Salix Napoleóna*.

NAPOLEONA, *Palis*. After the Emperor Napoleon. *Linn.* 13, Or. 1, Nat. Or. *Myrtaceæ*. Amongst the most remarkable plants that have hitherto been discovered ranks this rare species, of which living plants were brought in 1844 from Sierra Leone, by Mr. Whitfield. It forms a bush about as large as a *Camellia*; and some idea of the structure of its flowers may be formed, when we state that the species has been referred to the natural order *Passifloraceæ* by some botanists, and to *Cucurbitaceæ* by others. The propagation of this plant may be effected by cuttings, and in other respects its treatment should resemble that of *Gardenia*, and other first-class stove plants. *Syn.* 1, *Whitfieldii*.

imperialis 1 Ap. and crim. S. Ev. S. 4 S. Leone 1844

NAPUS or RAPE. See *Brassica Napus*.

NARAVÉLLA, *Decandolle*. From *Naravél*, its name in Ceylon. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceæ*. A mixture of sandy loam and peat suits this species, and cuttings of the young wood will root readily in sand, under a glass, in heat. *Synonyme*: 1, *Atrágene zeylánica*.

zeylánica . . Yellow 5, S. Ev. Cl. 10 Ceylon . 1796

NARCISSALES, or NARCISSAL ALLIANCE, includes, as at present constituted, six orders, of which the Bromel-worts and Amaryllids may be taken as examples.

NARCISSUS, *Linn.* From *narke*, stupor; on account of the effects produced by the smell upon the nerves. *Linn.* 6, Or. 2, Nat. Or. *Amaryllidaceæ*. This is an old and very popular flower of great beauty, and some of the species are highly fragrant. They are all of very easy culture, growing well in any light sandy soil, or in glasses of water, and increased by offsets from the bulbs. *N. poeticus*, and one or two more, are well known to be emetic. *Synonymes*: 1, *radiiflorus*; 2, *triflorus*; 3, *orientalis*, var.; 4, *Corbularia conspersa*; 5, *Quellia concolor*; 6, *Narcissus præcox*; 7, *bicolor*; 8, *Ajax maximus*; 9, *Narcissus Tazetta*; 10, *trilobus*; 11, *calathinus*; 12, *unicolor*, *nervus*; 13, *poeticus*, *marialis*; 14, *moschatius*; 15, *festalis*; 16, *Phyllogyne minor*; 17, *calathinus*, *odoratus*, *tripartitus*.

NARDÓSMIA, *De Candolle*. See *Tussilago*.
NARDÓSTACHYS JATAMANSI is supposed to be the true spikenard of the ancients; it is probably not yet introduced into our collections, although seeds and specimens have been brought to this country by several travellers.
NARDUS, *Linn.* From *nardos*, in Greek, and *nard*, in the Hebrew; having a peculiar smell. *Linn.* 3, Or. 1, Nat. Or. *Graminaceae*. An insignificant species, growing on moist heaths in many parts of Britain.
stricta . . . Apetal. . 6, H. Grass 1 Brit. heaths.
NARROWED, tapering.
NARTHÉCIUM, *Mohring*. From *narthez*, a rod; referring to the stem. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. Iris-looking plants, which grow in turfy peat, and are multiplied by divisions.
americanum . . . Yel. 7, H. Her. P. 4 N. Amer. . 1811
ossifragum . . . Yel. 7, H. Her. P. 4 Brit. bogs.
NARTHÉX, the name of *Asafetida* in Dioscorides. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. For culture, &c., see *Férula*. *Synonymes*: 1, *Férula asafetida*, *Asafetida disjuncta*.
asafetida 1 . . . Yel. 7, H. Her. P. 6 Persia . . 1835
- NARUM**. See *Unöna Narum*.
NASEBERRY-TREE. See *Achras Zapotilla*.
NASONIA, *Lindley*. From *naso*, a nose, in allusion to the column. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. A genus of Orchids, of which we possess little information.
sanguinea . . . Carmine . 2, S. Epi. 1 Tolima . . 1843
- NASTÜRTIUM**, *R. Brown*. From *nasus*, the nose, and *tortus*, tormented; the acidity of *N. officinalis* affects the muscles of the nose. *Linn.* 15, Nat. Or. *Brassicaceae*. Few of these plants are worth cultivating; they are of the simplest culture. The seeds of the annual kinds have only to be sown in the open ground in spring. *Synonymes*: 1, *Sisymbrium nasturtium*; 2, *S. terrestre*; 3, *S. sylvestre*. See *Nothoceras*.
erectum . . . Yel. . 6, H. A. 2 Siberia . . 1837
nätans . . . Yel. . 7, H. Aq. P. 3 Siberia . . 1827
officinale 1 . . . White. 6, H. Aq. P. 1 Brit. rivulets.
amphibium, *indicum*, *variofolium*, *bengalense*, *bursifolium*, *clandestinum*, *coronopifolium*, *indicum*, *lippizense*, *palmistre* 2, *pyrenaicum*, *sagittatum*, *syvestre* 3.
NASTUS, *Jussieu*. *Nastos* is the Greek name for

- a kind of reed. *Linn.* 6, Or. 1, Nat. Or. *Graminaceae*. A curious species of grass, requiring the heat of the stove and a good sandy peat soil; it is increased by suckers. *Synonyme*: 1, *Bambusa latifolia*.
latifolia 1 . . . Green . 5, S. Grass 20 Cumana . 1818
- NASÜTUS**, having a fancied resemblance to the nose.
NÁTANS, floating, swimming.
NATCHNEE. See *Eleusine coracina*.
NATIVE CARROT OF VAN DIEMEN'S LAND. See *Geranium parviflorum*.
NATIVE CURRANT OF TASMANIA. See *Leucopogon Richei*.
NATIVE GUM, or GUM GUAJACUM. See *Guaiacum officinale*.
NATIVE POTATO OF TASMANIA. See *Gastrodia Sissamoides*.
NÁTRIX. See *Ondnis Nátrix*.
NATURAL MARMALADE. See *Achras mammösa*.
NAÜCEA, *Linn.* From *naus*, a ship, and *kleio*, to inclose; the half capsule is hull-shaped. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceae*. A noble genus of plants, producing their flowers in large round heads. They grow well in a rich loamy soil, and young plants may be obtained from layers or cuttings. See *Adina* and *Uncaria*.

NEBULÖSUS, cloudy, dingy.
NECK; the upper tapering end in bulbs, or other plants, is called the neck.
NECKERA, *Hedwig*. In honour of N. J. Necker, a famous German botanist. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. This is a beautiful genus of mosses; the plants are found in woods,

upon trees, and rocks—*crispa, pennata, pumila*.
See *Anomodon* and *Dallönia*.

NECKLACE-TREE. See *Ormösia dasycarpa*.

NECTARIAL, of, or belonging to the nectary.

NECTARIFEROUS, bearing honey, or nectaries.

NECTARIFEROUS-TUBE in *Pelargonium* is the tube or swelled part at the top of the pedicel.

NECTARINA. See *Pérsica lévis*.

NECTARINE. See *Pérsica lévis*.

NECTARIUM, nectary, that part of a flower which produces honey.

NECTAROSOCÖRDUM, *Lindley*. From *nektar*, honey, and *skorodon*, garlic; in allusion to the honey-pores in its flowers, Honey-garlic. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. This is an ornamental plant, succeeding well in any common soil, and increased by offsets. *Synonyme*: 1, *Allium siculum*.

siculum 1. . . Pur. wht. 6, H. Bl. P. 3 Sicily . 1832

NEHAL. See *Maráttia alata*.

NEÍLLIA, *D. Don*. Named in honour of Patrick Neill, LL.D., secretary to the Caledonian Horticultural Society. *Linn.* 12, Or. 2, Nat. Or. *Homalínaceæ*. Little shrubs of easy growth in common garden soil, and increased by cuttings of the young wood.

rubiflora . . White . 7, H. De. S. 6 Nepal . 1850
thyrsiflora . . White . 7, H. De. S. 6 Nepal . 1850

NEIPPÉRGIA. See *Acineta*.

NEJA, *Don*. Meaning unknown. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A worthless greenhouse herbaceous plant, growing in any common soil, and increased by seeds—*gracilis*.

NÉLITRIS, *Gärtn.* From *ne*, privative, and *elytron*, a seed-vessel; the berry is without any partitions. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. An ornamental genus; for culture and propagation, see *Psidium*. *Synonyme*: 1, *Psidium decaspermum*.

Jambosella 1 White . 5, S. Ev. S. 10 Society's I. 1810
paniculata . White . 5, S. Ev. S. 10 Moluccas . 1820

NELSÖNIA, *R. Brown*. In honour of D. Nelson, the botanist who accompanied the circumnavigator Captain Cook. *Linn.* 2, Or. 1, Nat. Or. *Acanthaceæ*. A stove herbaceous plant, not worth cultivating—*hirsuta*.

NELUMBIACEÆ or WATER-BEANS. These are remarkable for the beauty of their flowers.

Nelumbium speciosum is supposed to be the ancient Egyptian *Lotus*, so popular in the history of that country. The nuts of all are eatable and wholesome.

NELÜMBIUM, *Jussieu*. From *nelumbo*, the Cingalese name of *N. speciosum*. *Linn.* 13, Or. 6, Nat. Or. *Nelumbiaceæ*. This is a genus of very interesting plants, which require to be grown in a rich loamy soil. The tank or tub in which the plants are grown should be kept full of water while the plants are growing, but may be allowed to get dry when the flowering season is over. They require to be grown in a strong heat, or they will not flower well; they may be increased by dividing the roots, but they are more readily increased by seeds. The fruit of *N. speciosum* is supposed to be the Egyptian bean of *Pythagoras*.

NEMOLÁPATHUM. See *Rumex Nemolápathum*.

NEMOPÁNTHEs, *Rafinesque*. From *nemos*, a grove, and *anthos*, a flower; habitat of the plant. *Linn.* 22, Or. 5, Nat. Or. *Aquifoliaceæ*. This is an ornamental plant, thriving well in peat soil, and readily increased by layers or seeds. *Synonymes*: 1, *fasciculäris*, *Ilex canadensis*.

canadensis 1 . White . 5, H. De. S. 6 N. Amer. 1812

NEMÓPHILA, *Barton*. From *nemos*, a grove,

and *phileo*, to love; the plants delight in a shady situation. *Linn.* 5, Or. 1, Nat. Or. *Hydrophyllaceæ*. This is a genus of very pretty annuals, all of which are well worth cultivating; they grow and flower best in a moist shaded situation, and a peat or vegetable soil. If the plants are wanted to flower early, the seed should be sown on a hotbed, and afterwards transplanted; but if not wanted to flower before late in summer, they may be sown in the open border. *Synonymes*: 1, *Hydrophyllum appendiculatum*; 2, *Phacelia parviflora*, *Eritoca parviflora*.

NEPAL-BARLEY. See *Hordeum cæleste trifurcatum*.

NEPENTHACEÆ or **PITCHER-PLANTS**. These highly curious plants are all natives of swamps in tropical countries. The order at present contains but one genus.

NEPENTHES, *Linn.* This is a name under which Homer speaks of a substance, probably opium; but in what way it is applied to this plant we do not know. *Linn.* 22, Or. 13, Nat. Or.

Nepenthaceæ. The various species of *Nepenthes* are extraordinary and singular plants, well known under the name of Pitcher Plants; they deserve to be grown in every collection: some attain the height of twenty or even thirty feet, when their appearance is inconceivably singular from the fine large pitchers which hang gracefully from the points of the strongest leaves. Many have supposed them to be extremely difficult of cultivation, but we have not found the least difficulty in cultivating all the species; indeed, we question whether the plants at Chatsworth are not finer than plants growing in and enjoying all the advantages of their native soil. Experience has clearly taught us that heat at the roots is as necessary to the successful growth of these plants as a heated atmosphere is indispensable to their stems and leaves. The plants should be potted in a compost of a little coarse fibrous peat, mixed with a greater portion of Hypnum Moss, and the pots to be then immersed in moss, the heat of which should not be less than eighty degrees, while the heat of the house need not be, except in summer, more than seventy. The moss in which the plants are plunged should be kept rather wet, so that a constant but general humidity is given off, which rises among them, and thus strengthens, while it promotes their growth. Offsets are thrown out from the base of the stem of old plants, which, when a few inches long, or when each offset has made three or four leaves, are taken off, and potted singly into thirty-two-sized pots, using the same kind of compost, and plunging them in the moss, as before directed, and as the plants grow, and the rootlets in the pot become numerous, an additional sized pot should be given to each, using precisely the same materials as before, observing to secure a good open drainage at the bottom of each; young plants may also be obtained from seeds. *Synonymes*: 1, *Phyllanthophora mirabilis*, *P. cantharifera*.

NÉPETA, *Linn.* From *Nepet*, the name of a town in Tuscany, where the plants were first found. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Some of the plants belonging to this genus are very pretty, and well adapted for flower-borders, while others are not worth growing. They prefer to grow in a light dry soil, and are increased by dividing the roots in spring or autumn, or by seeds. *Synonymes*: 1, *aragonensis*; 2, *Melissa alba*; 3, *N. patella*; 4, *grandiflora*; 5, *Melissa cretica*, *Thymus marifolius*; 6, *N. longiflora*; 7, *amethystina*; 8, *pannonica*; 9, *paniculata*; 10, *Teucrium si-*

NERIUM, *Linn.* From *neros*, humid; alluding to the habitat of the plants. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceae*. This is a genus of noble evergreen shrubs, of easy culture, and flowering freely the greater part of the year. *N. oleánder* and its varieties bear forcing remarkably well, and although treated as greenhouse plants, yet they will not flower well unless they are kept in the stove; they grow well in any rich light soil, and young cuttings root in any soil if kept moist. The leaves of

N. oleander contain gallic acid, and the leaves and bark of the root of *N. odorum* are applied externally as powerful repellents by Indian practitioners. See *Alstonia*, *Tabernaemontana*, and *Wrightia*.

 thyrsoïdum . Pink . 7, G. Ev. S. 6 Nepal . 1830

NERVELESS, without nerves.

NERVES, the strong ribs upon leaves or flowers.

NERVOSE, or **NERVOUS**, full of nerves.

NERVOUSLY-FURROWED, or **STREAKED**, having nerves like furrows, or streaks.

NESÆA, *Commerson*. From *Nesæa*, a sea-nymph. *Linn.* 11, Or. 1, Nat. Or. *Lythraceæ*. Ornamental plants when in flower, growing best in a mixture of loam, peat, and sand, and readily increased by cuttings in sand, under a glass. See *Décodon*, and *Heimia*.

triflora . . Blue . . 8, S. Her. P. 2 Mauritius 1802
 verticillata . Purple . 7, H. Her. P. 2 N. Amer. 1759

NÉSILIA, *Desfontaines*. The meaning not explained. *Linn.* 15, Nat. Or. *Brassicææ*. A hardy annual, not worth cultivating. *Synonyme*: 1, *Myagrum paniculatum* — paniculata 1.

NÉSTLERA, *De Candolle*. After Professor Nestler, of Strasburgh. *Linn.* 19, Or. 2, Nat. Or. *Asterææ*. Sow the seeds after the manner of other biennials, in any light soil, and shelter in the greenhouse. See *Columellia*.

biennis . Yellow . 7, G. B. 1 C. G. H. . 1820

NETOÛXIA, *Kunth*. In honour of H. Netoux, a botanical author. *Linn.* 5, Or. 1, Nat. Or. *Solanææ*. This plant is rather singular than pretty; it will grow in any light rich soil, and may be increased both by division and cuttings.

formosa . Yellow . 7, H. Her. P. 1 Mexico . 1826

NETTED, having the veins reticulated.

NETTLE. See *Urtica*.

NETTLE-TREE. See *Celtis*.

NEUROCARPUM, *Desfontaines*. From *neuron*, a nerve, and *karpos*, a fruit; each of the valves of the pod is furnished with a longitudinal nerve. *Linn.* 17, Or. 4, Nat. Or. *Fabææ*. These plants require to be treated like other stove plants. *Synonyme*: 1, *Crotalaria guianensis*.

guianense 1 . Purple . 5, S. Ev. S. 2 Guiana . 1826
 simplicifolium White . 5, S. Ev. S. 2 S. Amer. 1824

NEUROLÆNA, *R. Brown*. From *neuron*, a nerve, and *laena*, a cloak; alluding to the calyx. *Linn.* 19, Or. 1, Nat. Or. *Asterææ*. A worthless stove shrub, growing in sandy peat—lobata.

NEUROLÔMA, *Andrzejowski*. From *neuron*, a nerve, and *loma*, a fringe. *Linn.* 15, Nat. Or. *Brassicææ*. A plant of some beauty; it grows in any common soil, and is readily

increased by divisions. *Synonyme*: 1, *Arabis grandiflora*, *Hesperis arabidifolia*.
 arabidiflorum 1 Purple . 5, H. Her. P. 1 Siberia 1800

NEUROSPÉRMA, *Rafinesque*. From *neuron*, a nerve, and *sperma*, a seed; the seeds are articulated with anastomosing nerves. *Linn.* 21, Or. 1, Nat. Or. *Cucurbitææ*. For the culture and propagation of this trailing plant, see *Cucurbita*.

cuspidata . Yellow . 7, H. Tr. A. 5 Kentucky 1827

NEUTER, neither male nor female.

NEW HOLLAND CEDAR. See *Cedrela*.

NEW HOLLAND GUM ARABIC. See *Angéphora costata*.

NEW JERSEY TEA. See *Ceanothus americanus*.

NEW ZEALAND FLAX. See *Phormium tenax*.

NEW ZEALAND SPINACH. See *Tetragonia ex-pansa*.

NEW ZEALAND SPRUCE TREE. See *Dacrydium cupressinum*.

NEW ZEALAND TEA. See *Leptospermum scoparium*.

NICÁNDRA. See *Solanum*, and *Anisodidus*.

NICKER TREE. See *Guilandina*.

NICOLSÔNIA, *De Candolle*. In honour of Mr. Nicolson, author of an "Essay upon the Nat. Hist. of St. Domingo." *Linn.* 17, Or. 4, Nat. Or. *Fabææ*. For the culture and propagation of this plant, see *Uraria*. *Synonyme*: 1, *Hedysarum barbdatum*.
 barbata 1 . Purple . 6, G. Ev. S. 1 Jamaica . 1818

NICOTIÀNA, *Linn.* In honour of John Nicot, of Nismes, ambassador from the King of France to Portugal, who procured the first seeds from a Dutchman, who had them from Florida. *Linn.* 5, Or. 1, Nat. Or. *Solanææ*. The species of this genus generally grown as tobacco, are *N. Tabacum* and *N. macrophylla*. The popular narcotic which it furnishes is probably in more extensive use than any other, and its only rival is the betel of the East. The herb for smoking was brought to England from Tobago in the West Indies, or from Tobasco in Mexico (and whence the name), by Sir Ralph Lane, 1586. Seeds were shortly afterwards introduced from the same quarter. Sir Walter Raleigh first introduced smoking; in the house in which he lived at Islington were his arms on a shield, with a tobacco plant on the top. "Tobacco as used by man," says Du Tour, "gives pleasure to the savage and the philosopher, to the inhabitant of the burning desert and the frozen zone; in short, its use either in powder, to chew, or to smoke, is universal, and for no other reason than a sort of convulsive motion (sneezing) produced by the first, and a degree of intoxication by the two last modes of usage."—Many of the species are showy when in flower, and are well suited for decorating the flower-borders. The seeds require to be sown on a hotbed in spring, and when the plants have got two or three leaves, they should be planted into small pots, and placed in the frame, and planted out about the end of May, those for the open border in conspicuous situations, and those

intended for leaves in rows three feet apart.
Synonymes: 1, *suaveolens*; 2, *angustifolia*; 3, *decurrens, persica*. See *Petunia*.

NORDMANNIA, *Fischer and Meyer.* In honour of M. Nordmann, a zealous botanist. *Linn.* 4, Or. 1, Nat. Or. *Thymelàceæ*. A hardy herbaceous plant, of little merit. It may be increased by division.

cordifolia	. . . Pa. blue.	. 2, H. Her. P.		. . . 1846
------------	-----------------	-----------------	--	------------

NORFOLK ISLAND PINE. See *Attingia excelsa*.

NORONHIA, *Thouars.* In honour of C. Noronha, a traveller in Madagascar. *Linn.* 2, Or. 1, Nat. Or. *Oleàceæ*. For the culture and propagation of these plants, see the genus *Olea*. *Synonymes*: 1, *Olea cernua*; 2, *O. emarginata*.

cernua	1 . . . White	. 8, S. Ev. T. 15	Mauritius	. 1816
emarginata	2 . . . White	. 8, S. Ev. T. 15	Madagas.	. 1825

NORWAY-SPRUCE. See *Pinus canadensis*.

NOSTOC, *Vauch.* Meaning unknown. *Linn.* 24, Or. 7, Nat. Or. *Confervàceæ*. A genus of curious plants, found in lakes, and on rocks in moist situations—*cæruleum*, *commune*, *foliaceum*, *humifusum*, *microscopicum*, *Muscorum*, *prunifforme*, *sphæricum*, *verrucosum*, *vesicarium*.

NOTELÆA, *Ventenat.* From *notos*, south, and *clava*, an olive; in allusion to the genus being allied to *Olea*, and from its native country. *Linn.* 2, Or. 1, Nat. Or. *Oleàceæ*. These

plants grow well in peat and loam, and cuttings of the ripened wood root readily in sand, under a glass.

NOTHOCHLÆNA, *R. Brown.* From *nothos*, spurious, and *chlaina*, a cloak; the sori are frequently only covered over by the paleæ of the frond. *Linn.* 24, Or. 1, Nat. Or. *Polypodiàceæ*. This is a genus of very handsome stove ferns. They grow well in a sandy peat soil, in a hot, humid atmosphere, and are increased by divisions, or by seeds, sown and treated in the usual manner. *Synonymes*: 1, *Acrostichum vellem*, *lanuginosum*; 2, *Cheilanthes lentigera*; 3, *A. Marantæ*; 4, *Pteris piloselloides*; 5, *Pteris trichomanoides*; 6, *Cheilanthes vestita*; 7, *Acrostichum sinuatum*, *Gymnogramma sinuata*, *N. lavis*. See *Cheilanthes*.

NYCTAGINÆCÆ, or NYCTAGOS. The Marvel of Peru is a well-known example of this little order. They mostly consist of annuals and perennials.

NYCTÁNTHE, *Linn.* From *nux*, *nuctos*, night, and *anthos*, a flower; the flowers expand at night, and fall off at the break of day: whence *arbor-tristis*, the name of the species. *Linn.* 22, Or. 1, Nat. Or. *Jasminæcæ*. This tree is much valued on account of its very fragrant flowers, which are unfortunately seldom to be

seen in this country. It grows in loam and peat, and is increased by cuttings, not too ripe, planted in sand, under a glass, in heat. *Synonymes*: 1, *Scabrita scabra*, *Parilium arbor-tristis*, *Mánja pumerani*.

arbor-tristis 1 White . 4, S. Ev. S. 12 E. Ind. . 1781

NYCTELÆA. See *Ellisia Nyctelæa*.

NYCTERINIA, *D. Don*. See *Erinus Lychnideæ*, *frágans*, and *tristis*.

NYCTERISITON, *Ruiz and Pavon*. From *nycteris*, a bat, and *sition*, food; bats feed on the flowers. *Linn.* 5, Or. 1, Nat. Or. *Sapotæcæ*. This plant grows well in light turfy loam and peat well incorporated, and is increased by cuttings of the ripened wood planted in sand, under a glass, in heat. *Synonyme*: 1, *Chrysophyllum splendens*.

ferrugineum 1 White . 5, S. Ev. T. 30 S. Amer. 1823

NYCTERIUM. See *Solanum*.

NYMPHÆA, *Linn.* From *nymphæ*, a water-nymph; alluding to the habitation of the plants. *Linn.* 13, Or. 1, Nat. Or. *Nymphæacæ*. These are beautiful plants, well worth cultivating in every collection. The stove species should be grown in tanks or tubs of water placed in a warm part of the house, with some rich loamy soil at the bottom. The hardy kinds may be grown in ponds, canals, &c. They are all increased either by seeds, dividing the roots, or separating the tubers. The stems of *N. alba* are superior to oak galls for dyeing grey. *Synonymes*: 1, *N. stellata*, var.; 2, *cahlara*; 3, *esculenta*, *Castalia edulis*; 4, *C. mystica*; 5, *N. odorata minor*; 6, *Castalia scutifolia*, *Lótus Lánan*, *cærulea*; 7, *Lótus*; 8, *Victoria Fitzroya*; 9, *Castalia ampla*, *N. Rudgeana*; 10, *N. blanda*, *Lótus*, *fetida*. See *Niphar* and *Victoria*.

NYMPHÆCÆ, or WATER-LILIES. These are all floating plants, with handsome flowers and large, mostly peltate, leaves. The common white water-lily (*N. alba*) and the yellow water-lily (*Niphar lutea*) are well-known examples. The *Victoria regia* belongs also to this order.

NYMPHÆALES consist of three orders of water-

lilies, viz., *Nymphaeaceæ*, *Cabombaceæ*, and *Nelumbiaceæ*.

NYSSA, *Linn.* Supposed to be from the name of a water-nymph, on account of the habitat of the plants. *Linn.* 23, Or. 2, Nat. Or. *Alangiaceæ*. These trees are well suited for large shrubberies; they grow in any common soil, but prefer a damp situation, growing best

when planted on an island in a pond or river; they may be propagated by layers or seeds. *Synonymes*: 1, *N. aquatica*; 2, *N. capitata*; 3, *N. denticulata, tomentosa*; 4, *N. sylvatica*.

NYSSACEÆ. See *Alangiaceæ*.

O.

OAK. See *Quercus*.

OAK-CURRENTS, or SPANGLES, are formed on oak-leaves by the attacks of a small insect, called *Cynips quercus pedunculæ*.

OAK-GALLS are formed by the punctures of small insects (*Cynips*).

OAT-GRASS. See *Avena*.

OB is used in the composition of Latin technicals to indicate that the thing is inverted, as *obovate* is inversely *ovate*.

OBÆTUS, bottle-shaped.

OBCONICAL, inversely conical.

OBCORDATELY TWO-LOBED, inversely-cordate, with the indentation very deep, so as to appear of two lobes.

OBELISCÆRIA, *Cass.* From *obeliskos*, obelisk, in allusion to the elevated disk of the flower. See *Rudbeckia Drummôndii*.

OBERONIA, *Lindley*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Two species of this remarkable genus have been figured in Lindley's splendid work, entitled—*Sertum Orchidaceum*, where he makes the following remarks:—"The genus *Oberonia* consists principally of small, fleshy-leaved epiphytes, inhabiting the branches of trees in the woods of India, and having the most tiny of flowers. Fourteen species have been described, only a part of which have been at present introduced to this country. The resemblance to insects and other animal forms, which have been perceived in the *Orchidaceæ* plants of Europe, and which have given rise to such names as *Fly Orchis*, &c., may be traced so plainly in the genus *Oberonia*, in every species, that it alone would furnish a magazine of new ideas for the grotesque pencil of a German admirer of the wild and preternatural. If the Brahmins had been botanists, one might fancy they took their doctrine of metempsychosis from these productions. In the genera *Oberonia* and *Drymōda*, Pythagoras would have found a living evidence of animals transmuted into plants." *Synonymes*: 1, *Cymbidium iridifolium*, *Malaxis ensiformis*.

OBIDONE. See *Atriplex*.

OBLIQUELY-REPAND; a leaf having a margin undulated, and unequally and obliquely dilated, is said to be obliquely-repand.

OBLIQUELY-TRUNCATE, cut off in an oblique manner.

OBLONG, when joined by a hyphen to another word, signifies a form between the two words, as oblong-elliptical, oblong-linear, and so on.

OBLONG-TRIQUETROUS, oblong and three-sided.

OB OVATE, } inversely egg-shaped, with the broad-
OB OVOID, } est end uppermost.

OB OVATE, when joined by a hyphen to another word, signifies a shape between the two words, thus, obovate-spatulate, a shape between obovate and spatulate.

OB OVATE-CUNEATED, { between obovate and
OB OVATELY-WEDGE- { wedge-shaped, with the
SHAPED, { broadest end upper-
most.

OB SOLETE, hardly evident.

OB SOLETELY-TOOTHED, scarcely toothed.

OB TUSE-ANGLED, having blunt angles.

OB VOLUTE, having one part rolled on another.

ÔCA-QUÏNA. See *Ullucus tuberosa*.

OCCIDENTAL, coming from the west.

ÔCHNA, *Schreber*. From *ochne*, the Greek name of the wild pear-tree; there is some resemblance in the foliage. *Linn.* 13, Or. 1, Nat. Or. *Ochnaceæ*. The species of this genus are very ornamental; they grow from six to eight, and *O. arborea* to twenty feet high. Sandy loam and peat mixed suits them, and cuttings root in sand, under a glass, in heat. *Synonymes*: 1, *O. serrulata*, *O. natalitia*, *O. Delagoensis*, *Arbor-africana*, *Diporidium atropurpureum*, *O. arborea*; 2, *O. squarrosa*. See *Gômphia*.

OCHNACEÆ, or **OCHNADS**, are small trees or undershrubs, neat in their growth, but with no beauty as regards flowers; they are principally natives of warm climates.

OCHRADENUS, *De Candolle*. From *ochros*, yellow, and *aden*, a gland; disk of flower. *Linn.* 13, Or. 3, Nat. Or. *Resedaceæ*. For the culture of this pretty little plant, see *Reseda*.
baccatus . . . Yellow . 5, F. Ev. S. 1 Egypt . 1837

OCHRANTHE, *Lindley*. From *ochros*, yellow, and *anthos*, a flower; colour of flowers. *Linn.* 5, Or. 3, Nat. Or. *Cunoniaceæ*. For culture and propagation, see *Hypericum*.
arguta . . . Yellow . 3, G. Ev. S. 2 China . 1820

ÖCHRO. See *Hibiscus esculentus*.

ÖCHROLEUCOUS, pale yellow, ochre-coloured.

OCHROMA, *Swartz*. From *ochros*, pale; referring to the flowers, leaves, and wool of the seeds. *Linn.* 16, Or. 2, Nat. Or. *Sterculiaceæ*. Interesting plants, attaining from twelve to twenty feet high; they grow best in sandy loam, and young plants are raised from cuttings in sand, under a glass, in heat.

Lagopus . . . White . 5, S. Ev. T. 20 Jamaica . 1804
tomentosa . . . White . 5, S. Ev. T. 20 S. Amer. . 1816

OCHROPTERIS, *J. Smith*. From *ochros*, yellow, and *pteris*, a fern. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove ferns. *Synonyme*: 1, *Cheilanthes davallioides*.
pallens 1 . . . Brn. yel. 5, S. Her. P. 1 W. Indies.

ÖCHROSIA, *Jussieu*. From *ochros*, pale; alluding to the wood. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. A rather pretty shrub; for culture and propagation, see *Cérbera*. *Synonyme*: 1, *Cérbera borbonica*.
borbonica 1 . . . Pa. yel. . 5, S. Ev. S. 10 Bourbon 1823

ÖCHRUS, *Persoon*. From *ochros*, yellow; on account of the colour of the flowers. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. A pretty annual, of easy cultivation in any common garden soil. *Synonyme*: 1, *Pisum Öchrus*.
pallida 1 . . . Yellow . 7, H. Cl. A. 2 S. Eur.

OCHTHODIUM, *De Candolle*. From *ochthodes*, warted; alluding to the warted surface of the pods. *Linn.* 15, Nat. Or. *Brassicaceæ*. A plant of little beauty and very simple culture. *Synonymes*: 1, *Bunias ægyptiaca*, *Rapistrum ægyptiacum*.
ægyptiacum 1 . . . Yellow . 8, H. A. 2 Egypt . 1787

OCOTEA, *Kunth*. Meaning unknown. *Linn.* 11, Or. 2, Nat. Or. *Lauraceæ*. For culture, see *Laurus*.
psychotrioides . . . Green . 5, G. Ev. S. 10 Mexico 1823

OCOTE PINE OF MEXICO. See *Pinus Ocote*.

OCTÁNDRIA. The eighth class in the Linnæan system of botany, comprising plants with eight stamens.

OCTANDROUS, having eight stamens.

OCTOGYNOUS, having eight styles.

OCTOMERIA, *R. Brown*. From *okto*, eight, and *meris*, a part; in allusion to the pollen-masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus are not of a very interest-

ing character; for culture and propagation, see *Burlingtonia*. See *Eria*.

ODONTOLOMA, *J. Smith*. From *odous*, a tooth, and *loma*, an edge. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceae*. Stove ferns. *Synonymes*: 1, *Davallia Boryana*; 2, *Lindsaea tenuifolia*.

Boryanum 1. Br. yel. 5, S. Her. P. 1 I. of Luzon
pulchellum. Br. yel. 5, S. Her. P. 1 I. of Luzon
tenuifolium 2. Brown. 5, S. Her. P. 1 E. Indies

CECÉOCLEADES, *Lindley*. From *oikeo*, to inhabit, and *klados*, a branch. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. These are fine plants, well deserving a place in every collection; for culture and propagation, see *Vanda*. *Synonymes*: 1, *Angræcum falcatum*; 2, *A. maculatum*. See *Angræcum*.

falcata 1. . White . 4, S. Epi. 1 China . . 1815
maculata 2. . Ro. wht. 10, S. Epi. 1 Africa . . 1819

ÆDERA, *Crantz*. In honour of George Æder, a Danish professor of botany at Copenhagen. *Linn.* 19, Or. 5, Nat. Or. *Asteraceae*. A pretty genus, succeeding in sandy loam, mixed with a little peat, and propagated in sand, or sandy soil, under a glass.

aliæna. . . Yellow . . 5, G. Ev. S. 2 C. G. H. . 1829
prolifera. . Yellow . . 5, G. Ev. S. 2 C. G. H. . 1789

ÆDIPIDIUM. See *Gymnostomum Griffithsianum*.

ENANTHE, *Lamarck*. From *oinos*, wine, and *anthos*, a flower; odour. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. These plants are mostly uninteresting, and of simple culture in any common soil. The juice of the leaves and stem of *Æ. crocata* is a violent poison for man and animals. *Synonymes*: 1, *Æ. gymnorhiza*; 2, *Æ. approximata*; 3, *involutocrata*; 4, *Æ. australis*; 5, *Æ. virgata*; 6, *Æ. glauca*—*apiifolia*, *crocata*, *fistulosa*, *fluviatilis*, *globulosa*, *inæbrians*, *interupta*, *Lachenalii* 1, *L. approximata* 2, *L. involutocrata* 3, *nodiflora*, *peucedanifolia*, *phellandrium*, *pimpinelloides*, *p. chærophyllloides* 4, *p. pimpinellæfolia* 5, *prolifera*, *silafolia* 6, *tenuifolia*.

ENOCARPUS, *Martius*. From *oinos*, wine, and *karpos*, fruit; wine obtained from the fruit. *Linn.* 21, Or. 6, Nat. Or. *Palmaceae*. A fine palm, attaining fifty feet in height, thriving in any rich mould in a strong humid heat, and increased from suckers.

Batavia. . Pale yellow 5, S. Palm. 50 S. Amer. . 1820

ENOPHIA. See *Berchemia* and *Zizyphus*.

ENOTHERA, *Linn.* From *oinos*, wine, and *thera*, a catching; the roots of *Æ. biennis* were formerly taken after meals as incentives to wine-drinking. *Linn.* 8, Or. 1, Nat. Or. *Onagraceae*. The Evening Primroses form a genus of truly beautiful plants, well suited for ornamenting flower-borders; they will grow in any common garden soil. The perennial species are increased by dividing the plants at the roots, by seeds, and by cuttings. The seeds of the annual and biennial kinds merely require to be sown in the open border. *Synonymes*: 1, *Æ. spectabilis*; 2, *Æ. ambigua*; 3, *Æ. suaveolens*; 4, *Æ. concinna*; 5, *Æ. hirta*; 6, *Æ. alata*; 7, *Æ. striata*; 8, *Æ. undulata*; 9, *Æ. pinnatifida*; 10, *Æ. minima*; 11, *Æ. rhizocarpa*; 12, *Æ. bistorta Veitchiana*, *Æ. heterophylla*, *Holostigma Böttæ Veitchii*. See *Godéria*.

OFFICIAL, anything sold in shops.

OGEEHEE-LIME. See *Ngssa candicans*.

OGHEE PLUM. See *Spodias*.

ODIUM, *Link.* From *oon*, an egg, and *eidos*, resemblance. *Linn.* 24, Or. 1, Nat. Or. *Botrylaceæ*. The species of this genus grow on decayed wood, and the leaves of various plants

—*erysiphoides*, *fructigenum*, *falsum*, *leucocœnum*.

OFLEUS. See *Narcissus*.

OIL-NUT. See *Hamiltônia*.

OIL OF BEN is procured from the seeds of *Moringa pterygosperma*.

OIL OF CAMPHOR is procured from the roots of various species of cinnamon.

OIL OF CLOVES is obtained from the leaves of various species of cinnamon.

OIL OF ROSES is obtained by the distillation of rose-buds and flowers.

OIL-SEED. See *Verbesina sativa*.

OLEY GRAIN. See *Sesamum*.

OLEY PALM. See *Elais*.

OLACACEÆ, or OLACADS. A small order consisting of shrubs, chiefly natives of the East Indies, New Holland, and Africa. The wood of *Heisteria coccinea* has been supposed to be the partridge-wood, but this appears to be incorrect.

OLAX. Named by Linnæus from *olax*, a furrow; but how applied to this genus we are not informed. *Linn.* 3, Or. 1, Nat. Or. *Olacaceæ*. Ornamental climbers of simple culture in loam and peat; and young plants may be raised from cuttings in sand, under a glass, in heat.

OLD-MAN'S-BEARD. See *Geropogon*.

OLEA, *Linn.* From *elaia*, olive. *Linn.* 2, Or. 1, Nat. Or. *Olacaceæ*. The Olive is a very important genus of plants, on account of the oil, &c., which is obtained, chiefly from some of the varieties of *O. europæa*. They are also much admired for the fragrance of their flowers, which renders them worthy of a place in every collection. They grow well in loam and peat; ripened cuttings root readily in sand, under a glass. They may also be increased by grafting on the common privet. *Synonymes*: 1, *O. undulata*; 2, *Phillyrea robusta*; 3, *O. europæa*.

OMPHALÓDES, Tournefort. From *omphalos*, the navel, and *eidos*, like; the fruit resembles the navel; whence the genus has been called Venus's Navel-wort. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceæ*. These plants are very elegant border-flowers, and of the easiest culture. The perennial kinds grow well under the shade of trees and shrubs, and are increased by division. The seed of the annual species should be sown in the open border in spring. *Synonymes:* 1, *Cynoglossum brassicæfolium*; 2, *C. limifolium*; 3, *C. nitidum*; 4, *C. scorpioides*; 5, *Anchusa sempervirens*; 6, *C. omphalodes*.

ONAGRACEÆ, ONAGRADS, or EVENING PRIM-ROSES, are an assemblage of shrubs, herbaceous plants, and annuals, of which the well-known evening primrose (*Enothëra*) and fuchsia are examples of their general character.

ONCIDIUM, Swartz. Derived from *ogkos*, a tumour; the plants belonging to this genus have warts, tumours, or other excrescences at the base of the labellum. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is an extensive and very handsome genus of plants, every one of which is highly deserving a place in every collection. *O. papilio* bears a striking resemblance to a butterfly on the wing. *O. altissimum* throws up from fifteen to twenty flower-spikes, producing as many as two thousand flowers, the colour of which is yellow, spotted with brown, and there is the splendid *O. lanceanum*, one of the most prized in this valuable genus; but to particularise, where all are remarkable either for the beauty or the singularity of the flowers, would be invidious. The large-leaved kinds do best when grown in rustic baskets, which can readily be suspended from the rafters of the house; the basket should be made of small pieces of oak nailed together, or holes may be bored, and a piece of strong wire run through near the end of each, and fastened at the bottom. Some moss and rotten wood should be placed in the bottom previous to putting the plant in, in doing which, care must be taken not to insert the plant too deep. Moss and rotten wood must surround the roots of the plant, but should not on any account be raised higher than the roots of the leaves, or they will be liable to damp off. The small-growing kinds, as *O. iridifolium*, should be fastened on wood, and treated as the *Burlingtonias*. The other kinds, as *O. papilio* and *O. altissimum*, require to be potted similarly to the genus *Stanhopea*. *Synonymes*: 1, *O. juncifolium*; 2, *Cyrtorchilus volubilis*; 3, *Leorchilus sanguinolentus*; 4, *O. aurodum*; 5, *C. flexuosum*; 6, *Odontoglossum phyllorchilum*; 7, *O. roseum*, *Henchmanni*; 8, *Oncidium incarrum*; 9, *O. bicornatum*; 10, *O. gallopavinum*; 11, *Cyrtorchilus undulatum*. See *Leorchilus* and *Miltônia*.

ONCORHYNCHUS, *Fischer and Meyer*. Derived from *onkos*, tumour, and *rhynchus*, beak; alluding to the lip. Nat. Or. *Scrophulariaceae*. The seed of this plant may be sown in any common garden soil.

tenuis . . . H. B. . . 1837

ONCOSPÉRMA, *Blume*. From *onkos*, a hook, and *sperma*, a seed. The seeds are hooked. *Linn.* 21, Or. 6, Nat. Or. *Palmaeae*. Only one species of this genus is yet introduced: it is an elegant plant, requiring to be grown in rich soil and a damp situation in the stove, and treated like other stove palms.

filamentosum . Straw . 5, S. Palm. 60 India . 1840

ONE-BERRY. See *Páris*.

ONION. See *Allium Cepa*.

ONITES. See *Origanum Onites*.

ONOBROMA, *De Candolle*. From *onos*, an ass, and *broma*, food; favourite food of the ass. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. Ornamental plants, succeeding in any common soil, and increased by cuttings, divisions,

or seeds. *Synonyme*: 1, *Carthamus arborescens*; 2, *C. cœruleus*; 3, *C. cynaroides*; 4, *C. glauca*; 5, *C. leucocaulis*. See *Brólera*, *Carlóvia*, and *Heraclántha*.

incurvatus 2. . Apetal . 7, Grass 1 Brit. sea shore.
subulatus 3. . Apetal . 7, Grass 1 S. Eur. . 1806

OPHYRS, *Linn.* *Ophrys* is the Greek appellation for eyebrows, and is said to be applied to this genus because of the fringe of the inner sepals. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus are highly curious, and worth a place in every collection. They thrive best in a frame in a mixture of loam, peat, and chalk, broken small; the lights should be put on in very wet or frosty weather. It is advisable to have some turf grass growing where they are planted, as they can only be increased from seeds, which are parasitic when young, and will lay hold of the grass when they first vegetate. They will ripen seed without difficulty if care be taken to rub the pollen on the stigma. The seeds should be sown as soon as ripe, and when come up sufficiently, to be transplanted to where they are to remain. *Synonymes*: 1, *O. bicornis*, *O. aëstrifera*; 2, *O. arachnitis*, *exaltata*, *aëstrifera*, *crabronifera*, *apiculata*; 3, *O. speculum*; 4, *O. bombyliflora*, *O. distoma*, *O. hiulca*, *O. picta*, *O. pulla*; 5, *O. lutea*. OPIATE, having the power of opium.

OPIUM is the inspissated juice of the *Papáver somniferum*.

OPLISMENUS. See *Panicum*.

OPLÖTHECA, *Nuttall.* From *oplon*, armour, and *theca*, a sheath; in allusion to the appearance of the capsules. *Linn.* 5, Or. 1, Nat. Or. *Amarantaceæ*. Ornamental plants, growing in loam and peat, and increased by cuttings. *O. floridana* is readily multiplied by divisions of the roots. *Synonyme*: 1, *Gomphrena interrupta*.

floridana . White . 9, H. Her. P. 3 N. Amer. . 1824
interrupta 1 . Green . 7, S. B. 2 W. Ind. . 1733
lactea . White . 7, S. Ev. S. 2 S. Amer. . 1818

OPÖPANAX, *Koch.* From *opos*, juice, *pan*, all, and *akos*, a remedy; the juice of the plant is

supposed to cure all diseases. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A plant of little beauty, and of easy cultivation; it is increased by seeds, or divisions at the roots. *Synonyme*: 1, *Pastinaca Opópanax*.

Chirónum 1. .Yel. .6, H. Her. P. 6 S. Eur. .1640

OPORÁNTHUS. See *Amaryllis*.

OPORÍNIA, Don. From *oporinos*, autumnal; alluding to the time of flowering. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Merely herbaceous weeds, growing in meadows, &c. *Synonymes*: 1, *Apargia autumnalis*; 2, *A. pratensis*—*autumnalis* 1, *pratensis* 2.

OPULUS. See *Viburnum Opulus*.

OPÚNTIA, Tournefort. Some of the species are plentiful near Opus, a city of Locris. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. This is a very interesting genus of plants, well deserving of cultivation in every collection. They require to be treated like the *Mammillarias*; and young plants may be obtained by separating the branches at the joints, and allowing them to dry for a few days before sticking them in the soil, or they would soon rot. *O. cochinitifera* is valuable on account of its rearing the well-known coccus cacti, or cochineal insect. *Synonymes*: 1, *Cactus aurantiacus*; 2, *C. elatior*; 3, *O. humilis*; 4, *O. glomerata*; 5, *C. Opúntia*; 6, *C. elatior*; 7, *C. ferox*; 8, *C. sericea*; 9, *Cereus cylindricus*.

OROBANCHACEÆ, or BROOM-RAPES. A small order of herbaceous leafless plants, growing parasitically upon the roots of other species, bearing flowers not unlike those of *Gesnera*, and by no means devoid of beauty.

OROBANCHE, Linn. From *orobos*, vetch, and *ancho*, to strangle; supposed to kill the plants on which it grows. *Linn.* 14, Or. 2, Nat. Or. *Orobanchaceæ*. The Broom-rapes are a genus of curious parasitical plants, none of which are properly cultivable. *O. major* is powerfully astringent.

OROBUS, Linn. From *oro*, to excite, and *bous*, an ox; the *Orobos* of Theophrastus was the name of a plant used for fattening oxen. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The plants of this genus deserve to have a place in every flower-border, on account of their very elegant pea-blossoms. Any light soil suits them, and they are readily increased by dividing the plants at the roots in spring, or by seeds. *Synonymes*: 1, *O. atropurpureus*, *Orobella vicioides*; 2, *O. Gmelini*; 3, *Psoralea longifolia*. See *Platystylis*.

OSTERICUM, *Hoffmann.* The meaning is not known. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. For the culture of this plant, see *Opopanax*. *Synonyme*: 1, *Angelica pratensis*—*pratense* 1.

OSTRUTHIUM. See *Imperatoria Ostruthium*.

OSTRYA, *Michaux.* From *ostryos*, a scale; in

allusion to the scaly catkins. *Linn.* 21, Or. 9, Nat. Or. *Corylaceæ*. The species of Hop Hornbeam attain a good size, and are increased by layers or seeds. *Synonyme*: 1, *Carpinus Ostrya*.

virginica . Apetal . 4, H. De. T. 20 N. Amer. 1622
vulgaris 1 . Apetal . 5, H. De. T. 20 Italy . 1724

OSWEGO-TEA. See *Monarda didyma*.

OSYRIS, *Linn.* From *ozos*, a branch; numerous pliant branches. *Linn.* 22, Or. 3, Nat. Or. *Santalacææ*. This plant grows well in a mixture of loam and peat; and cuttings of the ripened wood root readily in sand, under a glass.

alba . . . White . 5, F. Ev. S. 3 S. Eur. . . 1739

OTACANTHUS. See *Otanthus*.

OTACHEITE-APPLE. See *Spodias dulcis*.

OTACHEITE-CHESTNUT. See *Inocarpus*.

OTACHEITE-MYRTLE. See *Securinea*.

OTANTHUS, *Link.* From *ous*, an ear, and *anthos*, a flower; appendages at the base of the florets. *Linn.* 19, Or. 1, Nat. Or. *Asteracææ*. A pretty plant, growing well in sandy loam; and cuttings planted in a shady border in autumn will soon root. *Synonyms*: 1, *Diotis candidissima*, *Santolina maritima*.
maritimus 1 Yellow . 8, H. Her. P. 4 Eng., sea co.

OTHONNA, *Linn.* From *othone*, linen; alluding to the downy clothing of the original plant. *Linn.* 19, Or. 4, Nat. Or. *Asteracææ*. Ornamental plants. *O. Tagetes* must be treated as other greenhouse annuals; the others may all be referred to *Osmites* for culture, &c. *Synonyme*: 1, *O. flabellifolia*.

virginica 1 . Yellow . 10, G. Ev. S. 3 Africa . 1821

OTIDIA. See *Pelargonium*.

OTITES. See *Silene Otites*.

OTCHILUS, *Lindley*. From *ous otos*, an ear, and *cheilos*, a lip; in allusion to the little ear-like appendages at the base of the lip. *Linn.* 20, Or. 1, Nat. Or. *Orchidacææ*. A curious little epiphyte, of no beauty. *Synonyme*: 1, *Broughdonia amiana*.

fusca 1 . . . Wh. blue . 8, S. Epi. 3 Nepal . 1840

OTÓPTERA, *De Candolle*. From *ous otos*, an ear, and *pteron*, a wing; wing furnished with

an auricle on the unguis. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ*. An elegant pea-flowering climber, growing in a mixture of peat, loam, and sand. Cuttings strike root freely in pots of sand, under a bell-glass, in heat.

Burchellii . Purple . 5, G. Ev. Cl. 6 C. G. H. . 1816

OUSTRÔPIS. See *Lotus*.

OÛTEA, *Aublét. Joutay* is the name of the species in Guiana. *Linn.* 3, Or. 1, Nat. Or. *Fabacææ*. These trees grow in sandy loam; and cuttings of the ripened wood root in sand, plunged in heat, under a glass. *Synonyme*: 1, *Macrolbium bijugum*.

bijuga 1 . . . White . 5, S. Ev. S. 10 E. Ind. . 1823

guianensis . White . 5, S. Ev. T. 15 Guiana . 1825

OUVIRÂNDRA, *Thouars*. *Linn.* 6, Or. 3, Nat. Or. *Juncaginacææ*. A most singular genus of aquatics. The leaves are without parenchyma, and consist of merely open network. They require a warm situation and shade; the water in which they are grown should never be allowed to become cold. *Synonyme*: 1, *Hydrogeton fenestrale*.

Berneriana . Pink . 5, S. Aquat. 3 Madagascar 1857

fenestralis . Grn. yl. 5, S. Aquat. 3 Madagascar 1855

ÔVA, the eggs of anything.

OVAL, having the figure of an ellipse.

OVÂRIUM, or OVARY, the part of the flower in which the young seeds are contained.

OVATE, egg-shaped.

OVATE, when joined by a hyphen to another word, signifies a form between the two, as ovato-cordate, ovate, and heart-shaped.

OVERLAPPING; when the margin of one thing lies upon that of another, it is said to overlap.

OVËDIA. See *Clerodendron*.

OVOID, egg-like.

OVULES, the young seeds of plants contained in the ovarium.

OXALIDÆÆ, OXALIDS, or WOOD-SORRELS.

Herbaceous plants, undershrubs, and trees, containing a large quantity of acid. Some of the species of *Oxalis* have large tuberous roots, which are eatable like the potatoes; some of the shrubby kinds, as *Averrhoa Bilimbi*, and *Carambola*, bear very grateful fruit, and are called in the East Indies Blimbing and Carambola. The leaves of some species are so sensitive that they are included amongst what are called sensitive plants.

ÓXALIS, *Linn.* From *oxys*, acid; the leaves have an acid taste. *Linn.* 10, Or. 4, Nat. Or. *Oxalidacææ*. Most of the plants of this genus deserve cultivating on account of their very pretty blossoms, which are produced in great abundance. The stove, greenhouse, and frame species, thrive well in a mixture of loam, peat, and sand; they should not be watered after they have done flowering until they begin to grow afresh. The shrubby kinds may be increased by cuttings or seeds; the herbaceous fibrous-rooted ones by dividing the plants at the roots, or by seeds; the bulbous-rooted species by offsets. Most of those marked greenhouse may be grown in a frame, only they must be protected from frost in

winter. The hardy species should be planted in a shady border, where they will grow and flower very freely. The seeds of the hardy annual species should be sown in the open border in spring. *O. Acetosella* contains pure oxalic acid, and several species are used in Brazil against malignant fevers. *Synonyms*: 1, *caprina*; 2, *arracacha*; 3, *rubens*; 4, *palustris*; 5, *floribunda*; 6, *Biophytum sensitivum*; 7, *Martiana*; 8, *rosea*.

OXYCEDRUS. See *Juniperus Oxycedrus* and *Acacia juniperina*.

OXYCOCCUS, *Richard*. From *oxy*, sharp, and *kokkos*, a berry; sharp acid taste of the berries. *Linn.* 8, Or. 1, Nat. Or. *Vaccinaceae*. The Cranberries are a well-known genus of plants. *O. palustris* grows in most turfy bogs in the mountainous parts of Britain, the berries being very much sought after. When the plants are grown for the sake of the fruit, they should be planted on an artificial bog, but when grown only for having specimens, they will do in pots well drained, and filled with peat and sand, with some sphagnum moss about their roots, and placed in pans of water. *Synonymes*: 1, *O. erythrocarpus*; 2, *Vaccinium macrocarpum*; 3, *V. Oxyccoccus*.

OXYPETALUM, *R. Brown*. From *oxy*, sharp, and *petalon*, a petal. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceae*. Interesting plants, growing in peat and loam, and increased by cuttings in sand, under a glass, in heat. *Synonyme*: 1, *Schizostoma longifolia*.

appendiculatum . Rose . 6, S. Ev. Tw. 6 Brazil . 1823
Banksii . Purple . 6, S. Ev. CL 6 Brazil . 1826
solanoides 1 . Rose . 6, G. Ev. Tw. 6 Brazil . 1846

OXYRAMPHIS, *Wallich*. From *oxy*, sharp-pointed, and *rampbos*, a beak. *Linn.* 17, Or. 4, Nat. Or. *Fabaceae*. A very pretty greenhouse plant, easily grown and propagated. *Synonyme*: 1, *Crotalaria macrostyla*.

macrostyla 1 . Pur. crim. 10, G. Ev. S. 4 Saharanpr. 1837

OXYRIA, *Hill*. From *oxy*, acid. *Linn.* 6, Or. 2, Nat. Or. *Polygonaceae*. The Mountain Sorrels grow well in common garden soil, and are increased by dividing at the roots, or by seeds. *Synonymes*: 1, *Rumex digynus*; 2, *O. reniformis*.

reniformis 1 . Green . 6, H. Her. P. 3 Brit., hills.
americana 2 . Green . 6, H. Her. P. 3 N. Amer.

OXYSPORA, *De Candolle*. From *oxy*, sharp, and *spora*, a seed; seeds awned at both ends. *Linn.* 8, Or. 1, Nat. Or. *Melastomaceae*. Elegant shrubs, bearing panicles of red flowers. They grow best in a mixture of loam, peat, and sand; and young cuttings, planted in the same soil, root freely under a glass, in heat. *Synonymes*: 1, *Orthostemma paniculata*; 2, *Melastoma rugosa*.

paniculata 1 . Red . 6, S. Ev. S. 2 Nepal . 1826
vagans 2 . Rose . 6, S. Ev. CL 5 E. Indies . 1849

OXYSTELMA, *R. Brown*. From *oxy*, sharp, and *stelma*, a crown; the foliola of the corona is acute. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceae*. An ornamental plant; for culture and propagation, see *Oxypetalum*.

esculentum . Yellow 5, S. Ev. Tw. 4 E. Indies . 1816

OXYTROPIS, *De Candolle*. From *oxy*, sharp, and *tropis*, a keel; flowers ending in a mucrone at the apex of the keel. *Linn.* 17, Or. 4, Nat. Or. *Fabaceae*. These plants are very handsome when in flower, and are well adapted for ornamenting rock-work, or the front of flower-borders. The seed should be sown where the plants are intended to grow, as they seldom thrive after transplanting. The rarer kinds may be grown in pots well drained, in a mixture of peat, sand, and a little loam, and

treated as other alpine plants. *Synonymes*: 1, *Astragalus campestris*; 2, *A. Halleri*; 3, *O. Gmelini*; 4, *Astragalus montanus*; 5, *A. dahuricus*; 6, *O. sordida*; 7, *A. uralensis*; 8, *O. altaica*.

P.

PACHANA. See *Cocculus cordifolius*.

PACHIDENDRON, *Willdenow*. From *pachys*, thick, and *dendron*, a tree. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. A genus of tree aloes, thriving in a mixture of sandy loam mixed with old lime and brick rubbish; the pots in which they are grown must be well drained, that the moisture may readily pass off. They require but little water in winter, and are increased from suckers, or young side shoots, when they are produced; leaves taken off close from the stem, and laid to dry for a few days, then planted in pots of dry soil, will throw out young plants at their base. *Synonymes*: 1, *Aloe africana*; 2, *A. angustifolia*; 3, *A. ferox*; 4, *A. principis*; 5, *A. pseudo-africana*, *africana angustior*; 6, *A. pseudo-ferox*, *sabferox*; *A. supralævis*.

PACHIRA. See *Carolinæa*.

PACHNYCBE, *Berkley*. From *pachne*, hoar, frost, and *kybe*, a head. *Linn.* 24, Or. 9, Nat.

Or. *Mucoraceæ*. These substances are found on decaying plants of various sorts—*acicula*, *albida*, *ferruginea*, *grisea*, *subulata*.

PACHYLBIS. See *Hieracium Kalmii*.

PACHYNEMA, *R. Brown*. From *pachys*, thick, and *nema*, a filament; filaments very thick. *Linn.* 10, Or. 3, Nat. Or. *Dilleniaceæ*. This little leafless shrub thrives best in a mixture of loam and peat; and cuttings strike root freely in sand, under a glass.

complanatum . White . 5, G. Ev. S. 1 1/2 N. Hol. 1825

PACHYPHYLLUM, *Humboldt*. From *pachys*, thick, and *phyllon*, a leaf; leaves fleshy. *Linn.* 20, Or. 2, Nat. Or. *Orchidaceæ*. For culture, &c., see *Maxillaria*.

distichum . .	Green . .	5, S. Epi.	1 Mexico .	1836
proctimbens .	Grn. blue.	5, S. Epi.	1 Mexico .	1836

PACHYPHYTON. See *Echeveria*.

PACHYPHYTUM, *Link and Otto*. From *pachys*, thick, and *phyton*, a plant; plants succulent. *Linn.* 5, Or. 1, Nat. Or. *Crassulaceæ*. For culture, &c., see *Crassula*. *Synonyme*: 1, *Echeveria bracteosa*.

bracteosum 1 . Crimson . 5, G. Ev. S. 1 1/2 Brazil. 1846

PACHYPLEURUM, *Don*. From *pachys*, thick, and *pleuron*, a rib; ribs of fruit corky. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A plant of no

ornament, growing in any common soil, and increased by division and seeds.

alpinum . . . White . 5, H. Her. P. 1 Altai . 1837

PACHYPÓDIUM, *Lindley*. From *pachys*, thick, and *podion*, a peduncle; thick footstalks. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. This succulent and tuberous-rooted genus succeeds in an equal mixture of light turfy loam, peat, and sand; as the plants require scarcely any water in winter, the pots must be well drained, that the moisture may pass off readily; cuttings taken off, and laid to dry till the wound is dried up, then planted in a pot of dry soil in spring, will strike root, and produce tubers before winter. *Synonymes*: 1, *Echites succulenta*; 2, *E. tuberosa*.

succulentum 1 Wht. red . 5, G. De. S. 1 C. G. H. 1820
tuberosum 2 . Wht. red . 5, G. De. S. 1 C. G. H. 1813

PACHYRHIZUS, *Richard.* From *pachys*, thick, and *rhiza*, a root; alluding to the thick tuberous roots of the plants. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The plants succeed well in a light rich soil; they may be increased from cuttings in sand, under a glass, by the tubers of the roots, or by seeds. *Synonyme*: 1, *Dolichos bulbosus*.

angulatus 1 . Purple . 7, S. Ev. Tw. 5 E. Ind. . 1781

PACHYSA. See *Erica*.

PACHYSÁNDRA, *Michaux.* From *pachys*, thick, and *aner*, a man; in allusion to the thickness of the stamens. *Linn.* 21, Or. 4, Nat. Or. *Euphorbiaceæ*. These are dwarf-growing plants thriving in any common soil, and may be planted near the front of flower-borders; they are increased freely by suckers from the roots.

coriacea . . . White . 6, S. Ev. S. 2 Nepal . 1822
procumbens White . 4, H. Her. P. 2 N. Amer. . 1800

PACHYSTIGMA, *Hooker*. From *pachys*, thick, and *stigma*, a stigma. *Linn.* 13, Or. 1, Nat. Or. *Rutaceæ*. A fragrant plant deserving cultivation, and requiring only the ordinary treatment of stove plants, ripened cuttings will root in the usual way.

pteleoides . White . 2, S. Ev. S. 10 Jamaica . 1844

PACOURY-UYA. See *Platonia insignis*.

PADINA, *Adanson*. Derivation doubtful. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. A small brownish-coloured species, found in the ocean—*deista*.

PADUS. See *Cerasus Padus*.

PÆDERIA, *Linn.* From *pæderos*, opal; in reference to the transparent berries. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. The species are remarkably free growers; any kind of light rich soil suits them, and cuttings root readily in the same kind of soil, under a glass. *Synonyme*: 1, *Lygodisodia Lingun*.

fœtida . . . Purple . 5, G. Ev. S. 6 China . 1806
Lingun . . . Red . . 5, S. Ev. S. 6 Mauritius . 1823

PÆDEROTA, *Linn.* The ancients applied this name to a species of *Acanthus*. *Linn.* 2, Or. 1, Nat. Or. *Scrophulariaceæ*. These pretty dwarf alpine plants are well adapted for rock-work; light sandy soil, or an equal mixture of peat, loam, and sand will suit them very well if grown in the open border, the situ-

ation should be dry and airy; they are increased from seeds.

Agéria . . . Yellow . 5, H. A. 3 Italy . 1824
Bonaróta . . . Blue . . 5, H. A. 3 Austria . 1818

PÆONIA, *Linn.* The physician Pæon was the first who used it in medicine. *Linn.* 13, Or. 2, Nat. Or. *Ranunculaceæ*. Beautiful flowering plants, mostly hardy enough to endure our winters. *P. Moután* and its varieties, though able to bear a moderate degree of frost, do not flower so well as when planted out in the border of the conservatory; they bear forcing well; a rich loamy soil suits them best. The shrubby kinds are increased from cuttings taken off in August and September, with part of the wood of the preceding year attached, and planted in a sheltered situation where they will root freely. The herbaceous species are increased by dividing the plants at the roots, taking care to leave a bud to each slip; the new varieties are obtained from seeds. *Synonymes*: 1, *P. Makôya*; 2, *P. laciniata*; 3, *P. tartarica*; 4, *P. dahurica*; 5, *P. sessiliflora*.

PALATE, the mouth of a ringent flower.

PALÀVIA, *Cavanilles*. In honour of A. Palau y Verdera, once professor of botany at Madrid. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. Plants only worth cultivating in botanical collections. Seeds sown on a hotbed early in spring, and the plants transplanted into the open border in May, will produce their flowers and seeds in abundance. *Synonyme*: 1, *P. prostrata* —malvæfolia, moschata 1, rhombifolia.

PALEACEOUS, abounding with chaffy scales.

PALICOÛREA. Named by Aublet, who does not give the meaning of the word. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. A genus of pretty shrubs, from four to six feet high; for culture and propagation, they may be referred to *Psychotria*. *Synonymes*: 1, *Psychotria lineata*; 2, *P. crocea*; 3, *P. rigida*.

apicata	Yellow. . 7, S. Ev. S. 3	Caraccas. 1824
crocea	Orange. . 8, S. Ev. S. 4	W. Indies. 1823

salsa	Cream. . 6, H. Her. P. 2	Russia. 1804

PALÍURUS, *Tournefort*. The name of a town in Africa. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*.

Very handsome plants, well fitted for shrub-beries. The fruit of *P. aculeatus* is very singular, appearing something like a head with a broad-brimmed hat on. This is the shrub of which, it is by many persons supposed, the crown of thorns which was put on our Saviour's head was made; and this assertion is borne out by many travellers of credit, who say that it is one of the most common shrubs in the country of Judæa, and from the pliability of its branches, which may be brought into any figure, it may afford a probability. They will grow in any common soil, and may be increased by layers, cuttings of the roots, or seeds. *Synonymes*: 1, *P. australis*; 2, *Zizyphus incarnatus*.

aculeatus	1. Grn. yel. 7, H. De. S. 4	S. Eur. 1596
virgatus	2. Grn. yel. 8, H. De. S. 6	Nepal. 1817

PALLÀSIA. See *Encelia*.

PALLÉNIS. See *Bupthalmum*.

PALMACEÆ, or PALM TREES. One of the most interesting orders in the vegetable kingdom. They are mostly natives of tropical countries, and their products are various and important.

PALMA-CHRISTI. See *Ricinus*.

PALMA-PINUS. See *Sagus vinifera*.

PALMATE, or PALMATED, divided so as to resemble a hand spread open.

PALMATELY-PARTED, parted in a palmate manner.

PALMÉLLA, *Lyngbye*. From *palmas*, vibration; jelly-like nature of the species. *Linn.* 24, Or. 7, Nat. Or. *Conferveæ*. Minute species, found in marshy or inundated places; they consist of very small globules, supposed by some naturalists to be the ova of animalcules —*adnata*, *botryoides*, *cruenta*, *grumosa*, *hyalina*, *livida*, *montana*, *protuberans*, *rivularis*, *rosea*.

PALMÉTTO. See *Sabal Palmétto* and *Chamærops Palmétto*.

PALM-KALE or TREE-KALE. See *Brassica Ole-racea palmifolia*.

PALM-OIL is obtained principally from *Cocos aculeata*.

PALMS. See *Palmaceæ*.

PALM-WINE is made in large quantities from the sap of *Mauritia vinifera*.

PALMYRA-WOOD. See *Borassus flabelliformis*.

PALO DE VACA. See *Galactodendron utile*.

PAMPAS GRASS. See *Gynæceum*.

PANACES. See *Heraclæum Pánaces*.

PANÆTIA, *Lindley*. Meaning not explained. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. This is a beautiful little annual of easy cultivation. The flower-heads are of the red-gold colour of *Elichrysium bracteatum*.

fálva	Yellow. . 5, G.	A. 1 Swan R. 1837
-------	-----------------	-------------------

PANARY, used for making bread.

PÁNAX, *Linn.* From *pan*, all, and *akos*, a remedy; in allusion to the miraculous virtues ascribed to *P. quinquefolium*. *Linn.* 23, Or. 2, Nat. Or. *Araliaceæ*. The species thrive well in a mixture of peat, loam, and sand, and cuttings root readily under a hand-glass. The root of *P. quinquefolium*, or *Ginseng* of the shops, is much esteemed by the Chinese for

its beneficial influence upon the nerves, and for other supposed virtues; but our physicians have not discovered any proofs of its efficacy in Europe. *Synonymes*: 1, *P. conchifolium*; 2, *P. chrysophyllum*. See *Aràlia*.

PANDANACEÆ, or SCREW-PINES, are a group of plants nearly resembling palms. They very often send down aerial roots, which descend until they reach the ground. Some species bear eatable seeds, and others are useful in medicine.

PANDANUS, Linn. From *pandang*, a word in the Malay language, signifying conspicuous. *Linn.* 22, Or. 1, Nat. Or. *Pandanaceæ*. This stately, fine-looking genus has received the English name, Screw-pine, on account of the appearance of the plants; they thrive in a light loamy soil. Some of the species produce suckers, by which they may be increased.

PANDURATE, fiddle-shaped.

PANGIACEÆ, or PANGIADS. An order of trees closely related to *Papayads*. They are all natives of the tropics.

PANICEOUS, eatable, good for bread.

PANIC-GRASS. See *Panicum*.

PANIC-GRASS. See *Ehrharta panicea*.

PANICLE, a loose disposition of inflorescence, as oats.

PANICLED, or PANICULATE, forming a panicle.

PANICULATELY-BRANCHED, loosely branched.

PANICULATELY-RACEMOSE, a panicle formed by numerous racemes.

PANICUM, Linn. From *panicula*, a panicle, or *panis*, bread. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A useful genus of grasses. *P. miliaceum* is frequently sown for feeding poultry, and is sometimes used as a substitute for rice. *P. arborëscens* is said by Linnaeus to equal in height the loftiest trees in the East Indies, though the culm is little thicker than a goose's quill; it grows in the woods and jungles. In cultivation, the species grow in any common soil, and are increased by dividing the roots, or by seeds. See *Arundinaria*, *Cynodon*, *Echinochloa*, *Pennisetum*, *Tricholena*.

PANOCOCCA-BARK. See *Swartzia tomentosa*.

PANZERIA. See *Leonurus*.

PAPÁVER, Linn. From *papa*, pap, or thick milk; the juice of the poppy was formerly used in children's food, to make them sleep.

Linn. 13, Or. 1, Nat. Or. *Papaveraceæ*. *P. somniferum* is cultivated in the vicinity of London; the capsules are sold to the druggists for the opium which is obtained from them. The plants succeed in a light rich soil. The perennial kinds are increased by dividing at the roots. All the species are narcotic. *Synonymes*: 1, *P. Bárseri*; 2, *P. pulcherrimum*; 3, *P. aurantiacum*; 4, *P. alpinum*; 5, *P. olympicum*. See *Meconopsis*.

PAPAVERACEÆ, or POPPY-WORTS. A well-known order of herbaceous plants, small shrubs, and annuals, bearing showy but very fugitive flowers. All possess a peculiar narcotic property, which is extracted and used under the name of opium.

PAPAW-TREE. See *Cárica Papàya*.

PAPÀYA. See *Cárica Papàya*.

PAPARACEÆ, or PAPAW-TREES. A group of shrubs and trees sometimes yielding an acrid milky juice. The fruit of *Cárica Papàya* is eaten when cooked, and esteemed by some persons; but its chief value is, that it forms an excellent vermifuge; and other species are very useful in medicine.

PAPER-MULBERRY. See *Broussonètia papyrifera*.

PAPHNIA, Lindley. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. For culture, &c., see *Maxillaria*. *Synonyme*: 1, *Maxillaria cristata*.

cristata 1. Wbt. pur. 7, S. Epl. 3 Trinidad. 1843

PAPILIONACEÆ. See *Fabaceæ*.

PAPILIONACEOUS, butterfly-shaped flowers, as the common pea.

PAPILLE, small, soft excrescences.

PAPILLOSE, or PAPILLOUS, having small glandular excrescences, like pimples.

PAPPOPHORUM, Schreber. From *pappos*, down, and *phoreo*, to carry. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Grasses of no interest, increased by seeds—*alopæcuroides*, *laguroides*, *nigricans*, *phleoides*.

PÁPPUS, crown of the fruit of *Compositæ*, and similar plants.

PÁPULÆ, round, soft, watery protuberances.

PÁPULOSE, covered with papulæ.

PAPYRACEÆ. See *Cyperaceæ*.

PAPYRACEOUS, resembling paper.

PAPYRUS, Willdenow. From the Syrian, *babeer*; whence the Egyptian word *papyrus*, paper. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceæ*. This is a splendid genus, requiring to be grown in a tub or large pot of water, with rich mud at the bottom; increased from divisions, or by seeds. The famed *Papyrus* of the Egyptians was obtained from our *Papyrus antiquorum*. *Synonymes*: 1, *Cyperus elegans*; 2, *C. odoratus*.

antiquorum	Apetal	8, S. Aq. P.	12 Egypt	1803
elegans 1	Apetal	7, S. Aq. P.	6 W. Ind.	1820

odoratus 2	Apetal	7, S. Aq. P.	12 W. Ind.	1819

PARA-NUTS, or BRAZIL-NUTS, are the fruit of *Bertholletia excelsa*.

PARABOLICAL, form of a parabola, longer than broad, tapering gradually to both ends.

PARAGUAY TEA. See *Ilex paraguensis*.

PARALLAS. See *Euphòria Paralias*.

PARASTRANTHUS, Don. From *parastrepho*, to invert, and *anthos*, a flower; the flowers are upside down compared with those of the other genera of the order. *Linn.* 5, Or. 1, Nat. Or. *Lobeliaceæ*. These beautiful plants are easily cultivated in a mixture of loam, peat, and sand; and increased by dividing at the roots. *Synonymes*: 1, *Lobelia lutea*; 2, *L. unidentata*; 3, *L. variifolia*.

simplex 1	Yellow	6, H. Her. P.	3 C. G. H.	1774
unidentata 2	Blue	7, H. Her. P.	3 C. G. H.	1794
variifolia 3	Yellow	6, H. Her. P.	1 C. G. H.	1812

PARDALIÁNCHES. See *Doronicum Pardaliánches*.

PARDÁNTHUS, Ker. From *pardos*, a leopard, and *anthos*, a flower; alluding to the spotted flowers. *Linn.* 3, Or. 1, Nat. Or. *Fridaceæ*. A handsome genus, succeeding in light rich soil; when planted in the open border the plants require a little protection in severe weather. Increased by divisions, or by seeds.

chinensis	Orange	6, H. Her. P.	2 China	1759
nepalensis	Orange	6, H. Her. P.	2 Nepal	1823

PEREIRA BRAVA ROOT. See *Cissampelos*.

PARÉNCHYMA, parts of plants consisting of cellular tissue only.

PARIAH-ARRACK, is an intoxicating drink, made

from the sap of the cocoa-nut palm (*Cocos nucifera*).

PARIANA, Aublet. Its name in Guiana. *Linn.* 21, Or. 9, Nat. Or. *Graminaceæ*. A curious under shrub, growing in any common soil, and increased by divisions.
campéstris. Apetal. 6, S. Ev. S. 2 Cayenne. 1803

PARIETAL, attached to the sides of the ovary.

PARIETARIA, *Linn.* From *paries*, a wall; they are commonly found on old walls. *Linn.* 23, Or. 1, Nat. Or. *Urticaceæ*. Mere weeds, found on old walls, stony ground, &c.; they have no beauty, and are of the easiest culture. *Synonymes*: 1, *Bœhméria urticifolia* — crética, floridana, indica, judalca, lusitânica, micrantha, officinalis, pennsylvanica, polygonoides, prostrata, urticifolia.

PARIÈTES, the sides of the ovary or capsule.

PARINARIUM, *Jussieu*. From *Parinari*, the Guiana name of one of the species. *Linn.* 7, Or. 1, Nat. Or. *Chrysobalanaceæ*. A noble genus of plants. *P. excelsum* is a fine tree, attaining the height of sixty feet, with long leaves and large terminal bunches of flowers, succeeded by a fruit of plumb-like appearance, which is eaten in Sierra Leone under the name of Rough Plumb. The plants grow freely in three parts sandy loam and one part peat; ripened cuttings in pots of sand, under a glass, in heat, root readily. *Synonyme*: 1, *Pterocarya campéstris*.

campéstre. 1 Yellow. 5, S. Ev. S. 6 Guiana. 1824
excelsum. White. 6, S. Ev. T. 60 S. Leone 1822
macrophyllum White. 5, S. Ev. S. 4 S. Leone 1822

PARIS, *Linn.* From *par*, equal; in allusion to the regularity of the parts. *Linn.* 8, Or. 4, Nat. Or. *Melanthaceæ*. The species of this genus thrive in light sandy loam, in a shady situation; increased from divisions, or by seeds. The juice of the berries of *P. quadrifolia* has been used in inflammation of the eyes.

polyphylla. Green. 5, H. Her. P. 1/2 Nepal. 1826
quadrifolia. Green. 5, H. Her. P. 1/2 Brit., woods.
verticillata. Green. 4, H. Her. P. 1/2 Caucasus 1825

PARITUM. See *Hibiscus*.

PARIVÒA, Aublet. The Guiana name of the tree. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. A very handsome pinnate-leaved stove tree, delighting in rich loamy soil, and propagated from cuttings. *Synonyme*: 1, *Dimorphia grandiflora*.

grandiflora 1. Purple. 5, S. Ev. T. 25 Guiana. 1821

PARKÈRIA, *Hooker*. In honour of C. S. Parker, who first found the plant in Essequibo. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. This genus of ferns grow best in turfy loam and peat mixed; they are increased by dividing the roots, or by seeds.

Lockharti. Brown. 5, S. Her. P. 1/2 Trinidad. 1824
pteroides. Brown. 8, S. Aq. P. 1/2 Essequibo. 1825

PARKIA. Named by Brown in memory of the celebrated African traveller Mungo Park. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. A beautiful genus of plants; for culture and propagation, see *Inga*. *Synonymes*: 1, *Inga biglobosa*, *P. biglobosa*.

africana 1. Vermil. 3, S. Ev. T. 35 Africa. 1822
biglobosa. Vermil. 3, S. Ev. T. 30 Guinea. 1822
uniglobosa. Vermil. 3, S. Ev. T. 35 S. Leone. 1822

PARKINSONIA, *Linn.* In honour of John Parkinson, a London apothecary, and author of *Theatrum Botanicum*, &c. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. This is a very handsome species, but seldom suffered to grow large enough to flower; a mixture of peat and loam suits it, and cuttings root in sand, under a glass. The imported seeds of it also vegetate freely.
aculeata. Yellow. 6, S. Ev. S. 10 W. Ind. 1739

PARMELLA, *Acharius*. From *parma*, a kind of small shield, and *heilo*, to inclose; the thallus. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. The species of this genus are found on rocks, trunks of trees, &c.; several of them are used in dyeing—*adglutinata*, *ambigua*, *aleurites*, *aquila*, *Borreri*, *cæsia*, *c. dubia*, *caperata*, *Clementiana*, *columnaris*, *conspersa*, *corrugata*, *cyclosetis*, *diacapsis*, *diatripa*, *eleina*, *encausta*, *fahlu-nensis*, *glomulifera*, *herbacea*, *horrëscens*, *lævigata*, *lamuginosa*, *olivacea*, *omphalodes*, *parietina*, *perforata*, *peritata*, *physodes*, *pitifera*, *plumbea*, *pulverulenta*, *recturva*, *reticulata*, *rubiginosa*, *rugosa*, *saxatilis*, *scortea*, *sinuosa*, *speciosa*, *stellaris*, *stigma*, *sulcata*, *thiacea*.

PARMELIACEÆ, or **PARMELIADS**. An extensive order of lichens, found in all damp and shady situations.

PARNASSIA, *Linn.* From Mount Parnassus, the abode of grace and beauty; these plants, on account of their elegance, are feigned to have first sprung up there. *Linn.* 5, Or. 3, Nat. Or. *Saxifragaceæ*. The plants do best in a moist peat soil and a shady situation. *P. palustris* is one of our most elegant marsh plants; increased by divisions, or by seeds, which ripen plentifully.

asarifolia. White. 7, H. Her. P. 1/2 N. Amer. 1812
caroliniana. White. 6, H. Her. P. 1/2 N. Amer. 1802

parviflora. White. 6, H. Her. P. 1/2 N. Amer. 1820
speciosa. Cream. 7, H. Her. P. 1/2 N. Amer.

PARÓCHETUS, *Hamilton*. From *para*, nigh, and *ochetos*, a brook; in allusion to the habitation of the plants. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. A light rich soil will answer these pretty plants, which are readily increased by dividing.

commnis. Purple. 7, F. Ev. Cr. 1 Nepal. 1820
majior. Lilac. 6, G. Her. P. 1 Nepal. 1827

PARONÝCHIA, *Tournefort*. From *para*, near, and *onyx*, a claw; supposed to cure a tumour which rises near the nail. *Linn.* 3, Or. 1, Nat. Or. *Ulecebraceæ*. From the dwarf stature of the species, they are all well adapted for ornamenting rock-work; they, however, thrive best in pots, in a mixture of sand and loam, and are easily increased by dividing at the roots, or by cuttings under a glass, or by seeds. *Synonymes*: 1, *Ulecebrum capitatum*; 2, *I. echinatum*; 3, *I. Paronýchia*. See *Ulecebrum*.

alsinifolia. White. 7, F. Her. P. 2 Spain.

PARTED, divided, but not to the base.

PARTHÉNÍUM, *Linn.* From *parthenos*, a virgin; supposed medicinal qualities. *Linn.* 19, Or. 4, Nat. Or. *Asteræææ*. Plants of no beauty, growing in any common soil—*Hysteróphorus incana*, *integrifolia*.

PARTHÉNÍUM. See *Pyrethrum Parthénium*.

PARTRIDGE-WOOD, is the timber of *Heistéria coccinea*, and another species belonging to the same order.

PASCÁLIA, *Ortega*. In honour of Dedan Pascal, M.D., a professor at Parma. *Linn.* 19, Or. 2, Nat. Or. *Asteræææ*. This species should be grown in pots, as it requires the protection of the frame in severe frosts; loam and peat suits it well, and cuttings planted under a glass soon root.

glauca . . . Yellow . . 7, H. Her. P. 2 Chile . 1799

PÁSPALUM, *Flugge*. From *paspalos*, one of the Greek names for millet. *Linn.* 3, Or. 2, Nat. Or. *Graminæææ*. Curious species of grass, without much beauty, and of easy culture. *Synonymes*: 1, *P. pubescens*; 2, *P. Swartziana*; 3, *P. littorale*; 4, *P. orbiculatum*; 5, *Digitaria pilosa*. See *Ceresia*.

PASQUE-FLOWER. See *Anemone pulsatilla*.

PASSERINA, *Linn.* From *passer*, a sparrow; in allusion to the beaked seeds. *Linn.* 8, Or. 1, Nat. Or. *Thymelæææ*. The plants of this genus flourish well in a mixture of sandy peat and loam; and cuttings of the young wood root freely in sand, under a glass. The seeds of *P. annua* may be sown in spring in the open ground. *Synonyme*: 1, *Stellera Passerina*; 2, *Chamæjasma*. See *Daphne*, *Lachnææ*, and *Stellera*.

PASSERINA. See *Erica Passerina*.

PASSIFLÓRA, *Linn.* From *passio*, passion, and *flos*, a flower; in allusion to the filamentous appendages or rays bearing a resemblance to the emblems of the passion of our Saviour. *Linn.* 16, Or. 2, Nat. Or. *Passifloræææ*. The species of this interesting and elegant genus are admirably adapted for stove and greenhouse climbers, being of easy culture, free growers, and if allowed plenty of room, producing abundance of beautiful flowers; many of the kinds produce fruit freely, from which, through impregnation, several fine hybrids have been raised. The fruits of some, as *P. edulis*, *laurifolia*, and *P. quadrangularis*, or *Granadilla*, are eaten; the succulent pulp which surrounds the seeds is found to be fragrant, cooling, and pleasant, agreeably acid, and admirably adapted for allaying thirst in hot climates. *P. edulis* and *P. laurifolia* will fruit freely in the plant stove. *P. quadrangularis* bears fruit resembling a large lime, and to cause it to produce them in abundance, should be treated as follows:—Plant it in a large box, or in a partitioned off corner of a stove, or tan-pit; if in the latter, holes may be bored in the sides to admit the egress of the roots into the tan. The shoots should be trained parallel to the glass, as vines, and treated similar to melons, that is, the most vigorous shoots removed, as they will be found not to bear so freely as those of a moderate growth; it will generally be found necessary to set the fruit by artificial impregnation, taking care to give the plant abundance of water. All the species will thrive well in a mixture of loam and peat, and are easily increased by cuttings planted in sand. The hardy kinds should be planted in

sheltered situations. *Synonymes*: 1, *P. heterophylla*; 2, *P. lunata*; 3, *P. lyræfolia*; 4, *P. palmata*; 5, *P. hircina*; 6, *P. hibiscifolia*; 7, *P. glabrata*; 8, *P. peltata*; 9, *P. discolor*; 10, *P. fragrans*; 11, *P. glauca*; 12, *P. punctata*; 13, *P. odora*. See *Distemma*, *Murucijsa*, and *Tacsonia*.

Garden varieties. These are now become rather numerous, and some are very beautiful; for particulars respecting them refer to the nurserymen's catalogues.

PASSIFLORACEÆ, or PASSION-FLOWERS. A most interesting and well-known order of climbers bearing singular and beautiful flowers. They "are the pride of South America and the West Indies, where the woods are filled with their species, which climb about from tree to tree, bearing at one time flowers of the most striking beauty, and at other times fruit tempting to the eye, and refreshing to the palate."

PASSION-FLOWER. See *Passiflora*.

PÁSTECA. See *Cucumis Citrullus Pástecca*.

PASTINÀCA, Tournesfort. From *pastinum*, a dibble; in allusion to the form of the root. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. *P. sativa*, or Parsnep, is a well known culinary root: the other species are unworthy of cultivation. They are only increased from seed, which should be sown in spring in the open ground. *Synonymes*: 1, *Férula feniculacea*; 2, *Malabarica graveolens*; 3, *Smýrniun nudicaule*; 4, *Malabarica pimpinelloides*; 5, *P. opaca*, *P. sylvestris*; 6, *P. dissecta*—*P. feniculacea* 1, *divaricata*, *graveolens*, 2, *latifolia*, *lutea*, *nudicaulis* 3, *panacifolia*, *pimpinellifolia* 4, *sativa* 5, *Sekakul* 6, *stenocarpa*, *taraxacifolia*, *umbrosa*. See *Opopanax*.

PATAGÓNULA, Linn. From the name of its native country, Patagonia. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceæ*. This is an ornamental tree, growing well in an equal mixture of loam and peat; cuttings planted in the same kind of soil, under a glass, root readily. *Synonymes*: 1, *Cordia Patagónula*, americana 1. White . 7, S. Ev. T. 25 S. Amer. 1732

PATCHOULI, or **PUCHA PAT**, is a fragrant preparation from a species of *Plectranthus*, perhaps *P. graveolens*, but this is not certain.

PATELLARIA, *Fries*. Derived from *patella*, a saucer; form of the cup. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceae*. An extremely minute species, found on wood—*atrata*.

PATENT, spreading, diffuse.

PATERSÓNIA, *R. Brown*. In honour of Colonel William Paterson, an excellent botanist. *Linn.* 16, Or. 1, Nat. Or. *Iridaceae*. A handsome genus of plants, in habit and growth resembling the *Iris*; they succeed well in sandy peat, and may be increased by divisions, or seeds. *Synonymes*: 1, *P. glauca*.

PAULLÍNIA. See *Serjania*.

PAULÓWNTIA, *Sieb.* In honour of the Hereditary Princess of the Netherlands, who was daughter to the Emperor of Russia. *Linn.* 14, Or. 2,

Nat. Or. *Scrophulariaceae*. A very noble hardy tree, growing from thirty to forty feet high, bearing panicles of dark lilac flowers, similar in shape to those of *Catalpa Syringifolia*. It thrives in any good soil, and is readily increased by cuttings. *Synonyme*: 1, *Bignonia Houstonii*, *imperialis* 1. Lilac . . 6, H. De. T. 30 Japan . 1840

PAUPERÍTIÖUS, poor, having a starved appearance.

PAVETTA, *Linn.* The name of one of the species in Malabar. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceae*. Handsome shrubs, growing best in an equal mixture of sandy loam and peat; increased from cuttings in sand, under a glass, in heat. *Synonymes*: 1, *P. indica*; 2, *P. alba*, *Isora paniculata*. See *Isora*.

PAVÓNIOUS, spotted so as to resemble a peacock.

PAXTÓNIA, *Lindley*. In compliment to the late Sir Joseph Paxton, F.L.S., H.S., who was for many years director of the gardens of His Grace the Duke of Devonshire, at Chatsworth, and conductor of the Magazine of Botany, and

- other works on botany and gardening. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This pretty species may be successfully grown in a mixture of very turfy loam, leaf-mould, and sand, with the treatment given to *Blebia*.
- rosea* . . . Pink . . . 7, S. Ter. $\frac{1}{2}$ Philippines . 1837
- PEA. See *Pisum*.
- PEACH. See *Amgdalus*.
- PEACH OF SIERRA LEONE. See *Sarcocéphalus esculéntus*.
- PEAR. See *Pyrus*.
- PEARL BARLEY is barley divested of the husk, and then operated upon further so as to form the kernel into round grains.
- PEARLWORT. See *Sagina*.
- PÉCEN, or VENUS'S COMB. See *Scândix Péc-ten*.
- PECTÍDIUM. See *Péctis*.
- PECTINÁRIA, *Haworth*. Derived from *pecten*, a comb. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. This species requires the same treatment as the genus *Stapelia*. *Synonyme*: 1, *Stapelia articulata*.
- articulata* 1 . . . Purple . . . 7, S. Ev. S. $\frac{1}{2}$ C. G. H. . 1800
- PECTINATE, or PECTINATED, like the teeth of a comb or rake.
- PÉCTIS, *Less*. From *pecten*, a comb; appearance of the teeth of the pappus. *Linn.* 19, Or. 2, Nat. Or. *Astericææ*. Stove annuals, of neither interest nor beauty, and the simplest culture — *cantescens*, *ciliatis*, *humifusa*, *linifolia*, *prostrata*. See *Longchampsia*.
- PECTORAL, relating to the breast.
- PEDALÍACEÆ, or PEDALIADS, form a small group resembling Bignoniads. They occur in all parts of the tropics. Their products are useful both as food and medicine.
- PEDÁLUM, *Linn.* From *pedalion*, a rudder; in reference to the dilated angles of the fruit. *Linn.* 14, Or. 2, Nat. Or. *Pedaliaceæ*. A curious annual, remarkable for its hard, nut-like fruit, with sharp points or horns; it prefers a mixture of loam and peat.
- index* . . . Whit. pur. . . 8, S. A. $\frac{1}{2}$ E. Indies 1773
- PEDATE; when leaves are cut in divisions, and the outer divisions again lobed, they are pedate.
- PEDATIFID, cut into lobes, the lateral ones not radiating from the petiole like the rest.
- PEDICEL, commonly applied to the partial foot-stalks of flowers.
- PEDICULÁRIS, *Linn.* From *pediculus*, a louse; supposed effect on sheep eating it. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. Beautiful little plants, with very regular, finely-cut leaves; they thrive best if planted in a mixture of peat soil, and kept moderately moist. The best way of obtaining an increase is by seeds. *Synonyme*: 1, *P. asplenifolia*.

- Harmala* . . . White . . . 7, H. Her. P. 1 Spain . . 1570
- PEKA-NUT. See *Juglans olivæformis*.
- PEKEA. See *Caryocar*.
- PELAGÓNIUM, *L'Heritier*. From *pelargos*, a stork; the capsules may be fancied to resemble the head and beak of a stork. *Linn.* 16, Or. 4, Nat. Or. *Geraniaceæ*. The shrubby kinds of this favourite genus will thrive in any rich soil; loam and decayed leaves will be found a good compost for them. The pots should be well drained with potsherds, and the plants receive plenty of air and water whilst in a vigorous growing state; cuttings root freely in soil or sand, under a glass; some of the finer and hard-wooded kinds will be found easier to increase by cuttings from the roots. The tuberous-rooted kinds should be kept quite dry when not in a growing state, and may be increased by small offsets from the roots. No genus is more liable than this

to sport into hybrids by promiscuous impregnation. All the fine varieties which are found in gardens have been produced by artificial hybridisation, that is, by cutting out the authors of the plant intended for the female parent before they burst, and impregnating the stigmas with the pollen of another. *Synonyms*: 1, *Geranium Grenvillea*; 2, *P. australe*; 3, *G. capitatum*; 4, *G. stenopetalum*; 5, *G. miniatum, album*; 6, *Phymatanthus tricolor*.

GARDEN VARIETIES.--These are now numbered by hundreds, and for beauty they far surpass any of the species hitherto introduced; for their colours and merits, refer to the nurserymen's catalogues, which are published annually.

PELÉCINUS. See *Biserrula Pelécinus*.
PELEGRINA. See *Alströméria Pelegrina*.
PELÉXIA, Poiteau. From *pelex*, a helmet.
Linn. 20, Or. 1, Nat. Or. *Orchidaceæ*. An herbaceous plant of no great beauty, growing in a mixture of loam and peat, and increased slowly by division at the roots. *Synonyme*: 1, *Néottia adnata*.
spiranthoides 1 Grn. wht. S. Ter. $\frac{3}{4}$ St. Vincent. 1823

PELIOSÁNTHEs, Andrews. From *pelios*, livid, and *anthos*, a flower. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Curious plants, with ovate-lanceolate leaves, requiring a mixture of loam, peat, and sand; propagated freely from suckers.
humilis . Green . . 5, S. Her. P. $\frac{1}{2}$ E. Indies 1809
Tota . . Brn. Grn. . 4, S. Her. P. $\frac{1}{2}$ E. Indies 1807

PELLICLE, a thin skin which envelopes certain seeds.

PELLITORY. See *Parietaria*.

PELLITORY. See *Pyræthrum Parthenium*.

PELLITORY OF SPAIN. See *Anthemis Pyræthrum*.

PELLITORY OF THE WALL. See *Parietaria officinalis*.

PELLUCID, bright, transparent.

PELTÁNDRA. See *Arum*.

PELÓRIA. See *Linaria vulgaris Pelória*.

PELTÁRIA, Linn. From *pelte*, a small buckler; in allusion to the form of the silicle. *Linn.* 15, Nat. Or. *Brassicaceæ*. Pretty little plants, flourishing in any light soil; readily increased by dividing the roots, or by seed. See *Helicophila*.

alliacea . White . 6, H. Her. P. 1 Austria . 1601
glastifolia . White . 6, H. A. 1 Syria . . 1823

PELTATE, a leaf is peltate when the petiole is fixed in the disk instead of the margin.

PELTATE-NERVED, used in reference to the nerves of a leaf radiating from the centre.

PELTIDEA, Acharius. From *pelte*, a target, and *eidos*, resemblance; form of the shields. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. The species of this genus grow on thatch, the bark of trees, among moss, &c. *P. aphthodes* is used, boiled in milk, by the peasants in Sweden, as a cure for the aphtha, from which it takes its name—*aphthodes*, *canina*, *horizontalis*, *membranacea*, *polydactyla*, *rufescens*, *scutata*, *spuria*, *vendsa*.

PENÆACEÆ, or SARCOCOLLADS. These are all small evergreen shrubs, natives of South Africa. It is supposed that from some of the plants of this order the Hottentots obtain the gum-resin called *Sarcocol*, used by them in dressing wounds.

PENÆA, Linn. In honour of P. Pena, who, in conjunction with Lobel, published *Adversaria Botanica* in 1570. *Linn.* 4, Or. 1, Nat. Or. *Penæaceæ*. Handsome shrubs, growing in sandy peat; and young plants may be obtained from ripened cuttings, in sand, under a glass.

fruticulosa . Red . . 6, G. Ev. S. 1 C. G. H. . 1822
imbricata . Pink . . 6, G. Ev. S. 1 C. G. H. . 1824
lateriflora . Red . . 6, G. Ev. S. 1 C. G. H. . 1825

marginata . Red . . 6, G. Ev. S. 1 C. G. H. . 1816
mucronata . Yellow . 6, G. Ev. S. 2 C. G. H. . 1787
myrtoides . Red . . 6, G. Ev. S. 2 C. G. H. . 1816
sarcocolla . Red . . 6, G. Ev. S. 1 C. G. H. . 1825
squamosa . Red . . 6, G. Ev. S. 1 C. G. H. . 1787

PENANG LAWYERS are walking-sticks made from the Calamus palm.

PENCILLED, marked in lines, as with a pencil, or having the appearance of hair pencil, as the stigmas of numerous species of *Oxalis*.

PENDULOUS, drooping, hanging down.

PENICILLARIA, Willdenow. From *penicillus*, a pencil; in allusion to the spikes. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Mere weeds, thriving in any common soil, and increased by seeds—*ciliata*, *spicata*.

PENICILLIUM, Link. From *penicillum*, a painter's pencil; alluding to the form of the filaments. *Linn.* 24, Or. 9, Nat. Or. *Botrydaceæ*. The species are found on the decaying stems of herbaceous plants and other rotten substances—*candidum*, *glaucum*, *sparsum*.

PENNISËTUM, Beauvois. From *penna*, a feather, and *seta*, a bristle. *Linn.* 3, Or. 1, Nat. Or. *Graminaceæ*. A genus of grasses, not worth cultivating except in botanical collections. The seed may be sown in the open border. *Synonyme*: 1, *Panicum holcoides*—barbàtum, cenchroides, compressum, dichotomum, holcoides 1, nepalense, orientale, polystachyon, setosum, violaceum.

PENNATOUS, soft, downy, like a feather.

PENNY-CRESS. See *Thlaspi arvense*.

PENNYROYAL. See *Mentha Pulgium*.

PENNYROYAL TREE. See *Satureja viminea*.

PENNYWORT. See *Hydrocotyle* and *Umbilicus*.

PENTACRÏPTA, Lehmann. From *pente*, five, and *krypte*, a vault. *Linn.* 23, Or. 1, Nat. Or. *Apiaceæ*. A parsley-scented plant, requiring protection in winter; increased by seeds only—*atropurpurea*.

PENTADÉSMA, R. Brown. From *pente*, five, and *desma*, a bundle; the stamens are disposed in five bundles. *Linn.* 18, Or. 2, Nat. Or. *Chusiaceæ*. A handsome, lofty-growing tree, very difficult to transplant, on account of the long tap-root, which, if injured, will kill it; the tree produces its flowers when about twenty feet high. It requires a strong moist heat. A mixture of loam and peat suits it; and ripened cuttings, with their leaves not shortened, will root in sand, under a glass, in a moist heat.

butyracea . White . 11, S. Ev. T. 30 S. Leone 1822

PENTAGONIUM. See *Vincetoxicum*.

PENTÁNDRIA. The fifth class of the Linnæan system of botany.

PENTÁGONAL, having five angles.

PENTÁGYNOUS, having five styles.

PENTÁNDROUS, having five stamens.

PENTAPÉTALOUS, having five petals.

PENTÁPETES, Linn. One of the Greek names for Cinquefoil. From *pente*, five; alluding to the five-celled fruit. *Linn.* 16, Or. 7, Nat. Or. *Slerculiaceæ*. Beautiful flowering plants, growing in any light rich soil; cuttings soon

root in mould or sand, under a glass, in heat.
Synonyme: 1, *Brothera ovata*.

ovata 1 . . . Scarlet . 7, S. B. 2 N. Spain. 1805
 phœnicea . . . Scarlet . 7, S. Her. P. 2 India . . 1890

PENTAPHYLLOX. See *Lupinaster*.

PENTÁTERIA, *Roeb.* From *pente*, five, and *pteron*, a wing; fruit with five wings. *Linn.* 23, Or. 1, Nat. Or. *Combretaceæ*. For culture, &c., see *Bucida*.

arguta . . . White . 5, S. Ev. S. 2 E. Indies .
 bialata . . . White . 6, S. Ev. S. 2 E. Indies. 1825
 paniculata . . . White . 5, S. Ev. S. 1½ E. Indies. 1826
 tomentosa . . . White . 5, S. Ev. S. 1½ E. Indies. 1824

PENTAPTERYGUM. See *Thibardina*.

PENTARÁPHIA, *Lindley*. From *pente*, five, and *raphis*, a spike. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceæ*. Handsome West Indian plants; for culture and propagation, refer to *Gesnera*.
Synonyme: 1, *Gesnera ventricosa*.

cubensis . . . Scarlet . 7, S. Ev. S. 1½ Cuba . 1848
 longiflora 1 . . . Red . . 7, S. Ev. S. 1½ Jamaica. 1823

PÉNTAS, *Bentham*. From *pente*, five; in allusion to the parts of the flowers being in fives instead of fours. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. Pretty soft-wooded shrubs, well worth cultivating for their numerous flesh-coloured flowers; they are easily cultivated, and require similar treatment to *Ruellia* or *Olerodendron*.

carnea . . . Pink . . 4, S. Ev. S. 2 Africa . . 1844

PENTATÁXIS, *D. Don*. From *pente*, five, and *taxis*, an arrangement. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. For culture, see *Helichrysum*.
Synonyme: 1, *Elichrysum Zeyheri*.
 micrantha 1 . . . White . 5, G. Ev. S. 1 C. G. H. . 1821

PENTHÖRUM, *Linn.* From *pente*, five, and *horos*, a boundary; the capsule is terminated by five beaks. *Linn.* 10, Or. 5, Nat. Or. *Crassulaceæ*. A succulent plant of little beauty, growing in light sandy soil, and increased by division at the roots; cuttings also root freely under a glass.

sedoides . . . Grn. yel. . 7, H. Her. P. 1 Virginia 1768

PENTLÁNDIA, *Herbert*. In honour of J. B. Pentland, Esq., Consul-General in Peru. *Linn.* 5, Or. 1, Nat. Or. *Amaryllidaceæ*. There are two varieties of this species, differing very slightly from each other. The first was found in Cusco in Peru, and was sent to Spofforth under the name of the red Narcissus, by the gentleman in compliment to whom the genus is named: and the other was found by Commodore Sullivan, during his command on the west coast of S. America, in 1837. Both varieties flowered for the first time in England, in August, 1839.

PÉNTZIA. Named by Thunberg, in honour of his pupil Charles John Pentz. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. A bushy, hoary-branched shrub, with corymbs of little yellow flowers; it grows in a mixture of loam and peat, and ripened cuttings root freely in sand, under a glass. *Synonyme*: 1, *P. crenata, Tannacetum flabelliforme*.

flabelliformis 1 Yellow . 6, G. Ev. S. 2½ C. G. H. 1774

PEPEROMIA, *Ruiz and Pavon*. Analogous to Piper. *Linn.* 2, Or. 3, Nat. Or. *Piperaceæ*.

This is the herbaceous tribe of Peppers. The species grow freely in an equal mixture of sandy loam and peat, and may be increased by cuttings, or divisions of the roots.

PEPPER-PLANTS. See *Piperaceæ*.

PEPPER-ROOT. See *Dentaria diphylla*.

PEPPER-VINE. See *Ampelopsis bipinnata*.

PEPPER, WHITE, is *Piper nigrum* with the black husks removed.

PEPPERWORT. See *Lepidium*.

PERÀDO. See *Ilex Peràdo*.

PERÁLTEA, *De Candolle*. In honour of Joseph Peralat, of New Spain, a botanist. *Linn.* 18, Or. 1, Nat. Or. *Fabaceæ*. An elegant plant when in flower; it grows in loam, peat, and sand; and young cuttings root if planted in a pot of sand, with a glass over them in heat.

lupinoides . Purple . 9, F. Ev. S. 2 N. Spain . 1827

PERDÍCIUM, *Linn.* From *perdia*, a partridge; partridges were fond of the original plant. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An uninteresting hardy herbaceous plant; succeeding in any common soil. *Synonyme*: 1, *Tussilago Anandria*—*Anandria* 1. See *Anandria*, *Chetanthera*, *Chabræa*, and *Trixis*.

PEREGRINIOUS, wandering, diffuse.

PERENNIAL, lasting many years without perishing.

PERESKIA, *Plumier*. Named in honour of Nicholas F. Pieresk, of Aix, in Provence, a lover of botany. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. Grotesque and ornamental plants, very different from the rest of the genera in *Cactaceæ*, from the branches being woody, as well as furnished with proper leaves. The species grow freely in any light soil; and cuttings root readily in mould, under a glass, in heat. *Synonymes*: 1, *Cactus Pereskia*; 2, *C. portulacæfolia*.

PERIÁNTH, or **PERIÁNTHIUM**, the envelope which surrounds the flower. This term is applied when the calyx cannot be distinguished from the corolla, as in *Lilium*, &c. &c.

PERIBÀLIA, *Trinius*. From *periballo*, to encompass. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A worthless species of grass, growing in any common soil, and increased by seeds. *Synonyme*: 1, *Aira involucreta*—*hispanica* 1.

PERICÁLLIS. See *Senecio*.

PERICÁLLIS, *D. Don*. From *perikalles*, very pretty; radial ligula beautiful. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A very desirable plant; increased by cuttings or seeds, and treated as the *Cineraria*. *Synonyme*: 1, *Cineraria tussiláginis*, *Senecio tussiláginis*.

tussiláginis 1 Purple . 4, G. Her. P. 1 Teneriffe 1829

PERICARP, the seed-vessel.

PERICHÆNA, *Fries.* From *peri*, around, and *ischano*, to encompass. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. Very minute *Fungi*, found on the cones of *Pinus Abies*, and dead trunks of trees—*populina*, *strobilina*.

PERICLYMENUM. See *Caprifolium Periclymenum*.

PERIDIUM, the tunic which invests *fungi*.

PERICHÆTIAL, leaves which in mosses surround the base of the stalk of the theca.

PÉRIGONE, the calyx and corolla.

PERIGYNOUS, inserted in the calyx, or in the disk which adheres to it.

PERILLA, *Linn.* The meaning not explained. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Plants of little merit, flourishing in any light loamy soil.

fruticosa	. . . White	. 7, G. Ev. S. 4	Nepal	. 1823
ocymoides	. . . White	. 7, H. A. ½	India	. 1870

PERÍPTERA, *De Candolle.* From *periptera*, a shuttlecock; resemblance in the form of the flower. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. A pretty little shrub, growing about three feet high, in a mixture of loam and peat. The species ripens its seed freely, from which it may be increased, as also from cuttings in sand, under a glass. *Synonymes*: 1, *Sida Periptera*, *Andea punicea*.

punicea	1	. Crimson-	. 5, S. Ev. S. 3	N. Spain	1814
---------	---	------------	------------------	----------	------

PERIPHERIC, circular, curved.

PERISTERIA, *Hooker.* From *peristera*, a dove; in allusion to the dove-like appearance of the column. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a genus of splendid plants, the most remarkable and interesting of which is the *P. eldæa*; it produces a long spike of yellowish-white waxy flowers, yielding a very peculiar fragrance. In the neighbourhood of Panama, it is known to the natives by the

appellation of "*el Spirito Santo*," and the reason for this name is quite obvious on looking at the flower; the centre of it exhibits a column which, with its summit and the projecting gland of the pollen-masses, together with the erect wings, bears a very striking resemblance to the figure of a Dove; whence the English name of the genus Dove-flower. The species should be grown in pots well drained, in a mixture of fibrous loam, leaf-mould, and sandy peat, and must not be over-watered at any season, more especially when torpid; they are increased by separating the pseudo-bulbs. See *Acineta*. *Synonymes*: 1, *Acineta Barkèri*; 2, *Angulda superba*, *Acineta Humboldtii*; 3, *P. maculata*; 4, *Angulda squarida*, *Lycodmrium squaridum*.

<i>prostrata</i> . .	White	5, H. Ev. S. 1	

PERPUSILLUS, very small.

PÉRSEA, *Gertner*. A name applied by Theophrastus to an Egyptian tree. *Linn.* 9, Or. 1, Nat. Or. *Laurææ*. This ornamental species succeeds well in a mixture of turfy loam and peat. The best way of propagating it is by layers, which root freely; ripened shoots taken off at a joint, and planted in sand, under a glass, in heat, will sometimes root. *Synonyme*: 1, *Laurus Persæa*.

gratissima 1 . Grn. yel. 6, S. Ev. S. 50 W. Ind. . 1739

PERSIAN SUN'S-EYE. See *Tulipa Oculis solis*.

PÉRSCA, *Tournefort*. So named from the Peach-tree coming originally from Persia. *Linn.* 12, Or. 1, Nat. Or. *Drupææ*. To this genus belong the well-known and much-esteemed fruits the Peach and Nectarine. The different kinds are propagated by budding on Damask plum-stocks, and new varieties are raised from the stone, after a mixture of the sorts by impregnation. In this country, they are usually trained on south walls in the fan manner, which is allowed to be the most natural. The soil best suited for them is three-parts mellow-loam, enriched with one-part vegetable mould. *Synonymes*: 1, *Amigdalus Persica Nectarina*; 2, *A. Persica*.

PERTUSARIA, *Acharius*. Derived from *perthusus*, full of holes. *Linn.* 24, Or. 8, Nat. Or. *Parmeliæææ*. A genus of cryptogamic plants, nearly allied to *Verrucaria*—*isidioides*.

PERUVIAN CINNAMON. See *Cinnamomum guianæ*.

PERULARIA. See *Orchis fuscescens*.

PERUVIAN-BARK. See *Cinchona Condaminæa, lanceifolia* and *purpurea*.

PERVIOUS, having a passage through which anything can be transmitted.

PERYMIENIUM, *De Candolle*. Meaning not explained. *Linn.* 19, Or. 2, Nat. Or. *Asteræææ*. Plants of the easiest culture.

<i>Barclayanum</i>	Copper	7, G. Ev. S. 2	Mexico . 1830
<i>discolor</i> . .	White	8, G. Ev. S. 2	Mexico . 1830

PESOMERIA, *Thouars*. From *pipto, peso*, to fall, and *meros*, a part; the sepals are spontaneously thrown off from the flower shortly after they have expanded, just as leaves are thrown off the stems of many of these plants when they receive a sudden check, and then the petals and labellum only remain to constitute the flower. *Linn.* 20, Or. 1, Nat. Or. *Orchidæææ*. The plant is nearly related to *Blétia* and *Phaius*, but will probably be found to grow best under the treatment given to *Burlingtonia*.

<i>tetragona</i> .	Brown	12, S. Epi. 2	Mauritius . 1837
--------------------	-------	---------------	------------------

PESTILENT-WORT. See *Tussilago Færfara*.

PETALACTE, *De Candolle*. From *petalon*, a petal, and *actæ*, a ray. *Linn.* 19, Or. 2, Nat. Or. *Asteræææ*. For culture, see *Helicrysum*. *Synonyme*: 1, *Gnaphalium coronatum*.

<i>bicolor</i> . . .	Pur. wht.	5, G. Ev. S. 1	C. G. H. 1316
<i>coronata</i> 1 .	White	5, G. Ev. S. 1	C. G. H. 1316

PETALIDIUM, *Nees*. From *petalon*, a petal; probably in allusion to the very conspicuous corolla. *Linn.* 14, Or. 2, Nat. Or. *Acanthæææ*. A very showy stove plant, flowering freely during the summer months, requiring the same culture as *Ruellia*. *Synonymes*: 1, *Ruellia barlerioides*, *Ruellia bracteata*.

<i>barlerioides</i> 1	White	6, S. Ev. S. 3½	India . 1810
-----------------------	-------	-----------------	--------------

PETALOMA, *Swartz*. See *Mouriria*.

PETAL-LIKE SCALES in *Alsiniæææ* and *Silendiæææ*, the scales which are fixed to the throat of the petals.

PETALOSTEMUM, *Michaux*. From *petalon*, a petal, and *stemon*, a stamen; the stamens are joined to the petals at the base. *Linn.* 16, Or. 2, Nat. Or. *Fabæææ*. Pretty herbaceous

plants, growing in any border soil; young plants are readily obtained by divisions. *Synonymy*: 1, *Dalea Kuhnsteria*.

PETALS, divisions of a corolla.

PETÁMENES. See *Gladriolus*.

PETÁSITES. See *Tussilago*.

PETIT COCO. See *Theophrasta Jussieii*.

PETIOLEATE, or PETIOLED, having footstalks.

PETIOLULATE, having little petioles.

PETIVERIA. Named by Linnaeus in honour of J. Petiver, F.R.S., a London apothecary. *Linn.* 7, Or. 1, Nat. Or. *Petiveriæceæ*. Ornamental plants, growing in a mixture of loam and peat; they propagate readily by cuttings under a glass.

alliaæa . . . White . . . 6, S. Ev. S. 2 Jamaica . 1759
octandra . . . White . . . 6, S. Ev. S. 2 W. Indies . 1737

PETIVERIÆCÆ, or PETIVERIADS. A small order of tropical undershrubs and herbaceous plants.

PETOUÏA. See *Apiöba Petoüma*.

PETRÆA. Linnaeus dedicated this genus to Robert James, Lord Petre, a famous patron of botany, who died in 1742. *Linn.* 14, Or. 2, Nat. Or. *Verbenæcæ*. Beautiful stove plants. *P. volubilis* is one of the most handsome stove twiners we possess. To grow them well, they must be planted in good rich mould, and kept in a strong heat. They may be propagated readily by cuttings under a glass.

PHÆNOGÆMOUS, such plants as possess visible sexual organs.

PHÆNOPSIS, *De Candolle*. From *phaino*, to be conspicuous, and *opsis*, the sight. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Of no interest to cultivators. *Synonyme*: 1, *Prenanthes viminea*.

viminea 1. Yellow . 7, H. B. 1½ Austria . 1789

PHÆOSTOMA. See *Clarkia*.

PHÁGNALON, *De Candolle*. See *Conjza*.

PHAGUS. See *Quercus Æsculus*.

PHAIUS, *Loureiro*. From *phaios*, shining; in allusion to the beauty of the original species. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is an interesting and valuable genus of plants, especially *P. albus*, which ought to be in every collection of orchidaceous plants; the following is the best way of cultivating it:—When the plant becomes dormant, it should be placed in a cool house, the temperature of which, in winter, should not be more than 45 or 50 degrees. After reposing the proper time, it will begin to push from the base of the stems; and when the young shoots are about half an inch in length, the plants should be repotted into heath soil, well drained at the bottom, and mingled with an abundance of finely-broken potsberds, according to the usual method of cultivating orchidaceous plants. For a moderate-sized plant, the pot should be about six inches in diameter at the top, which will allow of its completing the annual growth without being again potted. It will bear a free supply of water when growing vigorously, and may then be syringed once or twice a day, till it shows signs of flowering, when the syringing must be discontinued. When it has ceased flowering, it should be kept in a cool house, and sparingly watered until the leaves begin to turn yellow, when it must be removed to its winter quarters, and kept dry, merely supplying as much water as will keep the plant alive, and taking care never to wet the stems. For the culture of the other species, see *Blétia*. *Synonymes*: 1, *Blétia Tankervilleæ*; 2, *B. Woodfordii*; 3, *P. grandifolius*.

PHALACRÆA. See *Ageratum latifolium*.

PHALACROLÔMA, *D. Don*. See *Erigeron carolinianum*.

PHALÉNOPSIS, *Blume*. From *phalaina*, a moth, and *opsis*, resemblance; in allusion to the appearance of the flowers, which bears a striking resemblance to that insect: whence the name Indian Butterfly-plant. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. *P. amabilis* is an extremely beautiful plant. The flowers are produced on a nearly erect spike, and are very elegant, on account of their large size and the brilliant whiteness of the broad leathery petals. Some of the other species are equally handsome. They all require a very hot, damp part of the house, and are otherwise treated as the genus

Vanda. Increase is from side shoots, which, however, do not throw out freely. *Synonymes*: 1, *P. equestris*, *Stauroglottis equestris*.

PHALARIS, *Linn.* From *phalaros*, brilliant; having shining seeds. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Mostly uninteresting species. *P. commutata* and *appendiculata* are rather pretty; *P. canariensis* is cultivated on account of its seeds (canary-seed), which are given to birds; they merely require to be sown in any common soil. See *Achnodonton*, *Aira*, *Chilochloa*, *Crypsis*, and *Degrappis*.

PHALEROCARPUS, *G. Don*. From *phaleros*, white, and *karpus*, fruit; because of the colour of the fruit. *Linn.* 8, Or. 1, Nat. Or. *Eriacææ*. This pretty little plant may be referred to *Oxycooccus* for culture and propagation. *Synonymes*: 1, *Gaultheria serpyllifolia*, *Oxycooccus hispidulus*, *Arbutus filiformis*, *Vaccinium hispidulum*.

serpyllifolia 1 White . 4, H. Ev. Cr. ¼ N. Ame. 1815

PHÁLUS, *Michaux*. From *phallos*, signifying a wooden club. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. Fetid-smelling fungi, found in woods and hedges, on hazel trunks, &c.—*caninus*, fetidus, ismos.

PHALOCÁLLIS, *Herbert*. Not explained by its author. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. This remarkable plant produces a delicate and beautiful flower on a strong and tall stem. It will succeed pretty well under a warm south wall in the open ground; increase is by seeds. *Synonyme*: 1, *Capella plumbæa*.

plumbæa 1 . . . Lead col. . 7, F. Bl. P. 4 Mexico . 1837

PHANEROGAMUS PLANTS are such as have conspicuous flowers.

PHANEROPHLEBIA, *Presl*. From *phaneros*, conspicuous, and *phleps*, a vein; veins conspicuous. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*.

Stove ferns. *Synonymes*: 1, *Polypodium juglandifolium*; 2, *Aspidium nobile*.

juglandifolia 1 Yellow . 5, S. Her. P. 1½ S. Ame. 1823
nobile 2 . . Yellow . 5, S. Her. P. 1½ S. Ame.

PHARBITIS, *Choisy*. Meaning not explained.

Linn. 5, Or. 1, Nat. Or. *Convolvulaceæ*. This is a genus of very showy climbers, and tender annuals. The seeds of the latter should be sown on a hotbed, and when the plants are large enough, they should be planted into pots, in a mixture of sandy loam and decayed leaves; and afterwards treated as other tender annuals. *Synonymes*: 1, *Ipomœa barbata*; 2, *I. barbiger*; 3, *I. cathartica*, *I. pudibunda*, *Convolvulus pudibundus*, *C. portoricensis*; 4, *I. cœrulescens*; 5, *I. cuspidata*; 6, *I. PHARIUM. See *Béssera*.

PHARMACEUTICAL, relating to the art of pharmacy.

PHARNACEUM, *Linn.* Pharnaces, king of Pontus, is said to have first used it in medicine. *Linn.* 5, Or. 3, Nat. Or. *Illecebrææ*. Plants of little beauty, hardly worth cultivating except in botanical collections. The stove and greenhouse shrubby species thrive well in sandy loam and peat; and cuttings root readily, in the same kind of soil, if placed under a glass. The annual kinds should be sown in pots in the spring, and placed in a moderate hotbed, where they may remain till they are removed into the greenhouse in June. *Synonymes*: 1, *Mollugo bellidifolia*; 2, *M. spergula*.

PHARUS, *Linn.* From *pharos*, a covering; the long broad leaves are used as wrappers for various articles in Jamaica. *Linn.* 21, Or. 6, Nat. Or. *Graminææ*. A fine stove species, succeeding in rich loamy soil; young plants may be obtained from seed.

latifolius . . . Green . 7, S. Grass 6 Jamaica . 1703

PHASCUM, *Linn.* From *phaskon*, an ancient Greek name for a moss. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. Minute species of moss, often scarcely discernible to the naked eye, and varying much in appearance from each other; they grow on moist banks, in clay fields, &c. *Synonymes*: 1, *P. Schreberianum*, *curvisetum*; 2, *P. strictum*; 3, *P. multicapsulare*; 4, *P. stoloniferum* — *alternifolium*, *apiculatum* 1, *axillare* 2, *bryoides*, *crassinervium*, *crispum* 3, *c. rostellatum*, *curvifolium*, *cuspidatum*, *muticum*, *m. majus*, *minus*, *pâten*, *recurvifolium*, *piliferum*, *rectum*, *serratum* 4, *subulatum*, *triquetrum*.

PHASEOLUS, *Linn.* From *phaselus*, a little boat; fancied resemblance in the pods. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The different varieties of kidney-bean belong to this genus; they all thrive in any rich light soil. The annual kinds are increased by seeds, and the perennials by seeds or cuttings. *Synonymes*: 1, *P. trilobus*; 2, *P. hirtus*; 3, *Dolichos poly-stachyos*. See *Dolichos*.

PHILÆIA, Comm. From *phileo*, to love; on account of the beauty of the flowers. *Linn.* 6, Or. 1, Nat. Or. *Smilacææ*. The only species yet introduced is *P. buxifolia*, and is amongst the handsomest of the antarctic American flora. It is of slow growth, and is suited for cool situations, not too windy, and grows in com-

mon light soil; it sends up suckers, by which it may be increased.

buxifolia . Red . . 6, G. Ev. S. 4 Chile . . 1850

PHILESIÆÆ, or PHILESIADS, consists of a small group of very beautiful shrubs, bearing large showy flowers; *Lapageria rosea* bears eatable berries, and the roots have the same properties as *Sarsaparilla*.

PHILIBERTIA, Kunth. In honour of J. C. Philibert, author of an Elementary Treatise on Botany. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadææ*. This interesting plant is admirably adapted for training up rafters, pillars, or trellis-work, in stoves or conservatories. A mixture of loam, peat, and sand, suits it; and cuttings root readily when planted in sand or soil, under a glass, in a little heat. *Synonyme*: 1, *P. grácilis*.

grandiflora 1 Yel. wht. 6, G. Ev. Tw. 6 B. Ayres. 1836

PHILLÁMPHORA. See *Nepenthes Phillámphora*.

PHILLYREA, Linn. From *phyllon*, a leaf; leafy plants. *Linn.* 2, Or. 1, Nat. Or. *Oleacææ*. Ornamental shrubs, more valuable on account of their deep green foliage than for any beauty in their flowers, which are small and insignificant; they grow in any common soil, and are multiplied with facility, either by cuttings or layers; which last, is the best way of obtaining young plants. *Synonymes*: 1, *P. virgata*; 2, *P. ilicifolia*.

PHILYDRACEÆ, or **WATER-WORTS**, consists of a few species of herbaceous plants, principally natives of China and N. Holland. They have the habit of sedges and the flowers of spider-worts.

PHLYDRUM, *Banks*. From *philos*, a lover, and *hydor*, water. *Linn.* 1, Or. 1, Nat. Or. *Phylodracæ*. A pretty little species, with hairy leaves, and spikes of bright yellow flowers. It delights in a mixture of three parts loam and one part peat, in which it merely requires to be sown.

lanuginosum . Yellow . 6, G. B. 3 China . 1801

PHLEBIA, *Fries*. From *phleps*, a vein; veiny branches. *Linn.* 24, Or. 9, Nat. Or. *Agaricacæ*. Three rather interesting species, common in the latter part of the year on Alder trees—*merismoides*, *radiata*, *vaga*.

PHLEBODIUM, *R. Brown*. From *phleps*, a vein. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. A genus of ferns requiring the same treatment as *Polypodium*. *Synonymes*: 1, *Polypodium areolatum*; 2, *P. adreum*; 3, *P. decumanum*; 4, *Grammitis elongata*, *G. lanceolata*; 5, *Polypodium glabellum*; 6, *Pleopeltis percausa*; 7, *Polypodium glaucum*.

PHLEUM, *Linn.* Supposed to be the Greek name for *Typha*. *Linn.* 3, Or. 2, Nat. Or. *Graminacæ*. *P. pratense* and its varieties are extensively cultivated as spring grass for fodder, and are considered very valuable herbage: they prefer a strong stiff soil; the other species have little to recommend them, being mostly

uninteresting. *Synonyme*: 1, *P. stoloniferum*. See *Chilochloa*.

Bertolonii 1, *commutatum*, *echinatum*, *felinum*, *Gerardi*, *nodosum*.

PHLOGACANTHUS, *Nees*. From *phlox*, a flame, and *acanthus*, the type of this family; in allusion to the long spike of yellow or flame-coloured flowers. *Linn.* 2, Or. 1, Nat. Or. *Acanthacæ*. For the introduction of these magnificent shrubs to British collections, we are mainly indebted to Dr. Wallich. They rise to the height of from four to six feet, and may be grown in rather a rich soil. *Synonymes*: 1, *Justicia curvisiflora*; 2, *Justicia guttata*; 3, *Justicia thyrsoiflora*.

PHLOMIS, *Linn.* From *phlogmos*, a flame; in reference to the down being used for wicks. *Linn.* 14, Or. 1, Nat. Or. *Lamiacæ*. Very handsome plants, the greenhouse and hardy kinds all succeeding well in a rich light soil; cuttings, planted under a glass, root freely. The perennial species may be increased by seeds, or division. *Synonymes*: 1, *P. sàmia*; 2, *P. crética*; 3, *P. rotundifolia*; 4, *P. microphylla*; 5, *P. salviaefolia*; 6, *P. lunarifolia* *Russelliana* 7, *P. virens*. See *Leonotis*, *Leucas*, and *Eremostachys*.

PHLOX, *Linn.* From *phlox*, a flame; appearance of the flowers. *Linn.* 5, Or. 1, Nat. Or. *Polemoniaceæ*. This is an elegant genus of plants. The species are all rendered more valuable from their lively red, purple, or white flowers, being produced at a season of the year when the majority of the plants that flower at the same period are syngenesious, and for the most part yellow; the trailing kinds are admirably adapted for growing on rock-work, or in small pots; they grow best in a rich loamy soil. All the species root freely by cuttings,

under glass, or by divisions. *Synonymes*: 1, *P. amœna*; 2, *P. stolonifera*; 3, *P. crassifolia*; 4, *P. scabra*; 5, *P. longiflora*; 6, *P. Nuttalliana*.

PHŒNIX, *Linn.* The Greek name of the Date. *Linn.* 22, Or. 3, Nat. Or. *Palmaceæ*. The Date of the ancients is included in this noble genus of palms. *P. dactylifera* is a fine lofty-growing tree, with a rugged trunk, and leaves from six to eight feet long. The inhabitants of Arabia, Upper Egypt, &c., chiefly live upon the fruit of it; the hard stones are even ground up as food for their camels, and of the leaves they make bags and baskets. In Barbary, the midribs are used as fences for their gardens,

and they sometimes make use of the trunks in small buildings. The threads of the integuments between the fronds are made into ropes, and the rigging of smaller vessels; a juice is sometimes extracted from the tree by incisions, or scooping holes at the top, which is afterwards made into an agreeable wine. *P. fari-nifera* contains a farinaceous substance in the heart of the stem, which is said to be as nutritive as sago. The species all delight in a strong rich soil, and the only way of obtaining young plants is by seeds. *Synonyme*: 1, *Élate sylvestris*.

PHENOCOMA, *Don.* From *phoinos*, bloody, and *kome*, hair; involucre. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An ornamental species, requiring the same treatment as *Elichrysium*. *Synonyme*: 1, *Elichrysium proliferum*.
prolifer 1 . Crimson . 9, S. Ev. S. 4 C. G. H. 1789

PHOLIDOTA, *Lindley*. From *pholis*, a scale, and *ous*, (*otos*), an ear; in allusion to the scaly ear-like bractæe of the spike. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These are very pretty plants, and of easy cultivation; by keeping them constantly moist, they will grow well with the same treatment as *Burlingtônia*. *Synonyme*: 1, *P. imbricata*, *Ornithidium imbricatum*, *Ptilocnema bracteolata*.

PHOLIURUS, *Trinius*. From *pholis*, a scale, and *oura*, a tail. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A curious species of grass, growing in any common soil, and increased by seeds, which only require sowing in the open ground. *Synonyme*: 1, *Ophiurus pannonicus*.
pannonicus 1 . Apetal . 7, H. Grass 1 Hungary 1804

PHOMA, *Fries*. From *phos*, a pustule; appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Minute and curious species of brown-coloured fungi, commonly found on dead willow and poplar leaves—*Dahlia*, *Hedera*, *Poppuli*, *pâstula*, *saligna*.

PHORMIUM, *Thunberg*. From *phormos*, a basket; use made of the plant in its native country. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. In its native country this is a very useful plant, serving the inhabitants of New Zealand, Norfolk Island, &c., with cordage, coarse thread and linen. Attempts have been made to grow it for manufacturing purposes in New Holland, but without success. It requires to

be grown in a rich strong loam, and is multiplied by divisions of the root.

tenax 1. Grn. wht. 8, H. Her. P. 6 N. Zealand 1798

PHOTINIA, *Lindley*. From *photeinos*, shining; in reference to the leaves. *Linn.* 12, Or. 2, Nat. Or. *Pomaceæ*. A very handsome genus of trees, with fine, bright, glossy leaves, and corymbs of white flowers. The species require very little protection except in severe weather. They thrive best if planted in a mixture of loam and peat against a wall, in a warm situation; ripened cuttings put in sand, under a glass, will root readily; they may also be grafted or inarched on the different species of *Pyrus*, or *Mespilus*. In Nepal, they use the bark of *P. dubia* for dyeing scarlet. *Synonymes*: 1, *Mespilus bengalensis*; 2, *Cratægus glabra*.

PHOTINOPTERIS, *J. Smith*. From *photeinos*, shining, and *pterus*, a fern; fronds shining; *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*.
Horsfieldii . Brown . 3, S. Her. P. 1 Java . . .
simplex . Brown . 3, S. Her. P. 1 E. Indies .

PHRAGMIDIUM, *Link.* From *phragma*, a division, and *eidos*, similar. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Extremely minute species of black fungi. *P. gracile* is found in autumn on raspberry leaves; the others on the leaves from which they have taken their names—*gracile*, *Potentillæ*, *Rosæ*, *Rubi*.

PHRAGMITES, *Trinius*. From *phragmos*, a hedge; forming hedges. *Linn.* 8, Or. 2, Nat. Or. *Graminaceæ*. This plant is very common in ditches, and is readily increased by divisions. *Synonyme*: 1, *Arundo Phragmites*.
communis 1. Apetal . 8, H. Aq. P. 6 Britain, ditches.

PERYMA, *Linn.* Meaning unknown. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. A dwarf-growing plant, of no great merit. It succeeds best in a mixture of peat and loam, and cuttings planted under a glass root readily.

leptostachya Wht. pur. 8, H. Her. P. 1½ N. Ame. 1802

PHRYNIUM, *Willdenow*. From *phrynos*, a frog; plants inhabiting marshes. *Linn.* 1, Or. 1, Nat. Or. *Marantaceæ*. Plants resembling *Calathea* in general appearance. "In China, they use the leaves for wrapping up cakes in the oven; they are infused before expansion in spirit of rice or sugar, with three times its quantity of water, to make vinegar." For culture and propagation, see *Canna*. *Synonymes*: 1, *Maranta Casupo*; 2, *M. comosa*; 3, *M. spicata*; 4, *Myrsmma cannaefolia*; 5, *Calathea villosa*; 6, *Maranta sanguinea*.

PHYLICA. See *Souléngia*.

PHYLICA. See *Trichocéphalus*.

PHYLLANTHUS, *Linn.* From *phyllon*, a leaf, and *anthos*, a flower; flowers produced from the edges of the leaves. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. A very interesting genus of plants. The shrubby kinds thrive well in a mixture of loam and peat, and cuttings of the ripened wood root freely in sand, under a glass, in heat. The annuals and biennials may be sown in a hotbed frame; they require the same treatment as other tender annuals. In India the root, leaves, and young shoots of *P. Niruri*, are considered deobstruent and diuretic. *P. Urinaria* is also powerfully diuretic. See *Emblica*, *Kirgandia*, and *Xylophylla*.

PHYLLARTHON, *De Candolle*. From *arthros*, a joint, and *phyllon*, a leaf; leaves supposed to be jointed, or leaflet articulated on leaf-stalk. *Linn.* 14, Or. 1, Nat. Or. *Bignoniaceæ*. For the culture of this handsome shrub, see *Bignonia*. Synonymes: *Arthrophyllum mada-gascariense*, *Bignonia articulata*.

Bojeriana . Rose . 7, S. Ev. S. 10 Mauritius . 1844

PHYLLIS, *Linn.* From *phyllon*, a leaf; its chief recommendation. *Linn.* 5, Or. 2, Nat. Or. *Cinchonaceæ*. An ornamental shrub, growing from two to three feet high, and producing axillary corymbs of green flowers in abundance. It succeeds best in a rich strong mould, and cuttings root freely under a glass, in sand.

Nobla . . . Green . 6, G. Ev. S. 3 Canaries . 1699

PHYLLGYNE. See *Narcissus*.

PHYMATANTHUS. See *Pargonium*.

PHYSALIS, *Linn.* From *physa*, a bladder, alluding to the calyx. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. A genus principally composed of weeds. The stove and greenhouse species will grow well in any rich light soil; young plants may be obtained from cuttings, which root readily under a glass. The hardy kinds thrive in common garden soil, and are increased from seeds. The annual species merely require sowing in the open ground. Synonymes: 1, *Atropa aristata*; 2, *P. tuberosa*; 3, *P. fetidissima*, *P. nodosa*; 4, *Atropa frutescens*; 5, *P. par-viflora*; 6, *P. dubia*; 7, *P. Lagascea*, *P. Rothiana*; 8, *P. edulis*; 9, *P. atriviticifolia*;

10, *P. pruindsa*, *P. barbadensis*; 11, *P. flexuosa*; 12, *P. pennsylvanica*; 13, *P. Jacquinii*. See *Nicandra*.

PHYSIC-NUT. See *Jatropha*.

PHYSINGA, Lindley. From *physos*, a bladder, from the inflated appearance of the labellum. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a plant of little beauty, but very curious; it has the habit of an *Epidendrum*, and requires similar treatment to most other Mexican epiphytes.

prostrata . Purple . 9, S. Epi. 4 Demerara . . 1835

PHYSOCHLAINA, Don. Derived from *physa*, a bladder, and *chlaina*, an outer garment; alluding to the inflated calyx. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. The species of this genus produce their very elegant flowers early in the season, and are therefore desirable plants. They grow well in any soil, and are easily increased by divisions of the root, or by seed. *Synonyme*: 1, *Hyoscyamus orientalis*; 2, *H. physaloides*.

PHYTEUMA. See *Cypripedium*, *Phyteuma*, and *Réseda*.

PHYTOCRÈNE. Wall. From *phyton*, a plant, and *krene*, a fountain. This plant is called the vegetable fountain on account of the quantity of sap which flows from it on being cut. It requires the same treatment as other stove climbers, and is readily propagated by cuttings.

gigantea . White . 5, S. Ev. Cl. 40 Martaban. 1830

PHYTOLACCA. Linn. From *phyton*, a plant, and *lacca*, lac, in allusion to the crimson colour of the fruit. Linn. 10, Or. 5, Nat. Or. *Phytolaccaceæ*. The stove species of this ornamental genus grow well in any rich light soil, and may be increased either from cuttings or seeds.

P. decandra is a fine herbaceous plant, requiring a good deal of room, on account of its wide-spreading branches. Its greatest beauty is in the numerous bunches of black berries, which make a pretty appearance; it grows freely in rich soil, and is increased by seed, or cuttings under a glass. *Synonymes*: 1, *P. icosandra*; 2, *P. heptandra*; 3, *P. mexicana*, *Bogotensis*.

PICRIS. Linn. Derivation same as the genus *Picridium*. Linn. 19, Or. 1, Nat. Or. *Asteraceæ*. A genus nearly allied to, and requiring the same treatment as *Picridium*. *Synonymes*: 1, *Crêpis lappacea*—altissima 1, asperima, asplenioides, barbarum, daburica, fragrans, hieracoides, hispida, Kamtschatica, laxa, lyrata, nepalensis, ovalifolia, pauciflora, Pilidma, Rhagadiolus, rigida, Sprengeriana, strigosa. See *Helminthia*.

PICRIS. See *Serratula Picris*.

PICTA. painted.

PICRÈTIA. Decandolle. In honour of A. Pictet, a celebrated physician. Linn. 17, Or. 4, Nat. Or. *Fabaceæ*. Ornamental plants, growing freely in a mixture of loam and peat; young cuttings will root readily in sand, under a glass, in heat. *Synonymes*: 1, *Æschynomene aristata*; 2, *Robinia squamata*.

aristata 1 . . .	Yellow . 6, S. Ev. S. 3	St. Domin. 1816
squamata 2 . . .	Yellow . 6, S. Ev. S. 3	W. Indies. 1824

PIERARDIA. Roxburgh. In honour of Mr. Pierard, of Kew. Linn. 8, Or. 1, Nat. Or. *Sapindaceæ*. An edible-fruited tree. It grows in a mixture of loam, peat, and sand, and ripened

- cuttings root in sand, under a glass, in heat. *Synonyme*: 1, *Pieràrdia sàpida*.
dulcis 1. Yellow . 5, S. Ev. T. 20 Sumatra . 1820
- PIERIS.** See *Andròmèda*.
- PIG-FACES, or CANAGONG.** See *Mesembryanthemum aquilaterale*.
- PIG-NUT.** See *Càrum bulbocàstanum*.
- PIGEON-PEA.** See *Cajànus*.
- PILEA, Lindley.** From *pileo*s, a cap; one of the divisions of the perianth. *Linn.* 21, Or. 4, Nat. Or. *Urticàcæ*. A neat little creeper, making a good cover to hide the earth of large pots, &c.; it will grow in any common soil, and propagates freely from cuttings.
muscòsa . Green . 5, S. Ev. Tr. $\frac{1}{2}$ W. Indies . 1793
- PILEANTHUS, De Candolle.** From *pileo*s, a cap, and *anthos*, a flower; flower inclosed before expansion in an involucre. *Linn.* 12, Or. 1, Nat. Or. *Myrtàcæ*. For culture, see *Càly-thria*.
Limàcis . White . 4, G. Ev. S. 2 N. Holland . 1824
- PILE-WORT.** See *Ficària*.
- PILEATE,** having a cap or lid like the cap of a mushroom.
- PILI,** long stiffish hairs.
- PILL-WORT.** See *Pilulària*.
- PILIFEROUS,** bearing hairs.
- PILÓBOLUS, Tode.** Derived from *pileo*s, a cap, and *boleo*, to eject. *Linn.* 24, Or. 9, Nat. Or. *Mucoràcæ*. A curious little species, of a very fugacious nature, found on dung during the summer and autumn months—*crystallinus*, *c. ròridus*.
- PILOSE,** covered with long soft hairs.
- PILOSÉLLA.** See *Hieràcium Pilosélla*.
- PILULÀRIA, Linn.** From *pilula*, a pill; shape of the heads containing the reproductive organs. *Linn.* 24, Or. 5, Nat. Or. *Marsileàcæ*. An obscure little plant, found in damp meadows among grass, especially where they have been overflowed with water during winter.
globulifera . Brown . 7, H. Ev. Tr. $\frac{1}{2}$ Brit. moi. pl.
- PILULÍFERA,** producing little balls.
- PILÚMNA, Lindley.** From *pileo*s, a cap. *Linn.* 20, Or. 1, Nat. Or. *Orchidàcæ*. *P. láxa* is a very interesting orchid, with pale-coloured flowers, which are borne on short racemes. The species require the same treatment as *Mazil-lària*. *Synonyme*: 1, *Trichopília cándida*.
fragrans 1 . White . 7, S. Epi. $\frac{2}{3}$ Merida . 1856
láxa . . . Pur. wt. gn. 9, S. Epi. $\frac{1}{2}$ Mexico . 1844
- PIMELEA, Banks.** From *pimele*, fat. *Linn.* 2, Or. 1, Nat. Or. *Thymelàcæ*. A genus of beautiful shrubs, growing three or four feet high, and producing numerous heads of flowers. To flourish well, they must be planted in a mixture of three parts sandy peat and one part loam, the pots being carefully drained; young cuttings will strike in sand, under a glass; they likewise produce seeds, by which they are readily increased.

- PIMÉNTA, Lindley.** *Pimento* is the Spanish name for Indian pepper. *Linn.* 12, Or. 1, Nat. Or. *Myrtàcæ*. This species forms in Jamaica a handsome tree, growing thirty feet high, and producing a fruit well known in this country under the name of Allspice. It delights in a strong loamy soil, and ripened cuttings will root in sand, under a glass, in heat. *Synonyme*: 1, *Mýrtus pimènta*.
vulgàris 1. . White . 6, S. Ev. T. 25 W. Indies 1723
- PIMÉNTO.** See *Pimènta*.
- PIMPERNEL.** See *Anagállis*.
- PIMPINÉLLA, Linn.** Altered from *bipinnate*; referring to the leaves being twice pinnate. *Linn.* 5, Or. 2, Nat. Or. *Apiàcæ*. Worthless species, growing best in a dry sandy soil, and increased only by seed, which ripen in abundance. *Synonymes*: 1, *Tràgium Anisum*; 2, *T. aromàticum*; 3, *T. Bròteri*; 4, *P. ténuis*; 5, *T. depréssum*; 6, *P. dissècta*; 7, *P. mèdia*; 8, *T. peregrinum*; 9, *P. nigra*; 10, *T. Colàmnæ*; 11, *T. villosum*—*Anisa* 1, aromàtica 2, àurea, bubonoides 3, crètica 4, deprèssa 5, flàva, intermèdia, lùtea, màgna, m. dissècta, 6, m. orientàlis 7, peregrina 8, rotundifolia, Saxifràga, S. nigra 9, Tràgium 10, villosa 11. See *Sison*, *Tràgium*, and *Trinia*.
- PIMPLED,** covered with minute pustules, resembling pimples.
- PINÁSTER.** See *Pinus Pinàster*.
- PINCKNEYA.** Named by Michaux in honour o Mr. Pinckney, an American, now forgotten. *Linn.* 5, Or. 1, Nat. Or. *Cinchonàcæ*. *P. pubens* is a half-hardy tree, furnished with long downy leaves, and dividing but little into branches. It grows best planted against a south wall, with a little protection in severe weather; sand and peat is the best soil for it, and cuttings will root, if planted in sand, under a glass.

PÍNDROW. See *Picea Pindrow*.

PINEA. See *Pinus Pinea*.

PINE. See *Pinus*.

PINE-APPLE. See *Ananássa*.

PINÆCÆ, or CONIFERS. These are noble timber trees, natives of various parts of the world, but principally in the temperate and arctic regions. Their timber is known by the names of Deal, fir, pine, cedar, &c., and is highly esteemed.

PINGUICULA, *Linn.* From *pinguis*, fat; in allusion to the greasiness of the leaves. *Linn.* 2, Or. 1, Nat. Or. *Lentibulariæcæ*. Beautiful little plants, but difficult to keep artificially. *P. grandiflora* will succeed in common bog soil. The other species require a shaded morass to come to any perfection. *P. vulgaris* acts on cow's-milk the same as common rennet. In Sweden and Norway the milk of the Reindeer is poured on the leaves, and set aside for a day or so, when it acquires consistence and tenacity, and then neither the whey nor the cream will separate, forming a very grateful food.

PÍNGUIN. See *Bromelia Pinguin*.

PÍNGUIS, fat, greasy.

PINK. See *Dianthus*.

PINNÆ, the leaflets of a pinnate leaf.

PINNATE; when a leaf is divided into numerous small leaflets, as the leaves of the ash.

PINNATELY-TERNATE, having three leaflets disposed in a pinnate manner.

PINNATÍFID, when a leaf is divided into lobes from the margin nearly to the mid-rib.

PINNATÍFIDLY-SINUATED, scalloped in a pinnatifid manner.

PINÓLIA. See *Èria*.

PIN-PILL. See *Opuntia curassávica*.

PINSÄPO. See *Picea Pinsäpo*.

PINUS, *Linn.* From *pinos*, a Greek word used by Theophrastus to designate a pine-tree; and some authors derive it from the Celtic *pin*, or *pyn*, a mountain or rock; alluding to the habitat of the tree. *Linn.* 21, Or. 10, Nat. Or. *Pinæcæ*. This much-esteemed and well-known genus contains some of the trees of most universal use in civilised society, and form a very important article of commerce both in Europe and America. Most, if not all, of the species are highly deserving of culture, being very ornamental and beautiful in every stage of their growth. They will succeed on almost any kind of soil, but to bring the timber to its greatest state of perfection, a somewhat loamy and a cool subsoil are requisite. Young plants may be obtained by a variety of methods. All the species may be propagated by layers, by inarching on nearly allied kinds, by herbaceous grafting; many may also be increased by cuttings; but the speediest way is by seed, and which process we shall briefly

notice. In some of the species the cones attain their full size the first year, but, in most, not till the end of the second autumn. The cones of *P. sylvestris* and the like, open of themselves shortly after being gathered from the tree, and spread out in the sun; but the cones of *P. Pinaster*, *P. Pineæ*, and similar kinds, do not, though treated in the same manner, open their scales for several months. The seed should be sown on finely-prepared rather sandy soil, in March or April. The seeds of the most common kinds are always sown on beds, and after being gently beaten down, are slightly covered with light soil. The seeds of the rare kinds are sown in pots filled with finely-prepared soil, and when up, treated like other hardy seedlings. For a great mass of other useful information relative to these fine trees, indeed, for every thing that it is necessary to know respecting them, we refer the reader to *Loudon's Arboretum et Fruticetum Britannicum*, a work which ought to be in the hands of every lover of hardy trees and shrubs.

Under *Pinus*, we have included the genera *Abies* and *Picea*, of Don and other authors, believing them to be so nearly akin as to render it unnecessary to keep them generically distinct. We have, however, in this genus departed a little from the original plan of the work, by dividing it into Sections, so that those who differ from us in opinion, will have no difficulty in recognising the species of *Abies* and *Picea* of authors, every species of those genera being retained alphabetically under the respective Sections.

SECT. I. PINUS, *Linn.* Derivation same as genus. *Synonymes*: 1, *P. palustris*; 2, *P. genevënsis*; 3, *P. oocarpa*; 4, *P. Pinaster Ascarina*; 5, *P. Lemoniána*; 6, *P. ndra-zelándica*; 7, *P. echinata*, *P. uncinata*; 8, *P. rubra*; 9, *P. Edgariana*; 10, *P. monophylla*, *Llaveana*; 11, *P. californica*. See *Abies*, *Cedrus*, *Cunninghámia*, *Dámmara*, and *Lárix*.

PIPER, *Linn.* From *pippul*, a Bengalese name, or *pepto*, to digest. *Linn.* 2, Or. 3, Nat. Or. *Piperaceæ*. All the species of this interesting genus flourish in a mixture of loam and peat, requiring but little water; they are multiplied

with facility by cuttings and suckers. The well-known pepper of the shops is principally produced by *P. nigrum*. *P. Belle* furnishes the Beetle-leaf of the Southern Asiatics, in which they inclose a few slices of the Areca-nut, and a little shell lime; this they chew to sweeten the breath, and to keep off the pangs of hunger, and such is the immense consumption of this luxury in the East, that it nearly forms as extensive an article of commerce as that of tobacco in the West. See *Peperomia*.

PIPERACEÆ, or **PEPPER-WORTS**, are shrubs and herbaceous plants of no beauty, but are interesting on account of furnishing the peppers of the shops and other products useful in medicine.

PIPERÉLLA. See *Thymus Piperella*.

PIPERITUS, hot, pungent.

PIPEWORT. See *Eriocaulon*.

PIPFUL. See *Piper*.

PIPTANTHUS, *Sweet*. From *pipto*, to fall, and *anthos*, a flower; the flowers are very fugacious. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. A very handsome and ornamental shrub when in flower, and sufficiently hardy to thrive in the open ground without any protection; it grows well in a rich loamy soil, and is increased by layers, or cuttings of the nearly ripened wood, planted in sand, under a glass. *Synonyme*: 1, *Anagyris indica*. nepalensis 1 . Yellow . 5 H. De. S. 10 Nepal . 1821

PIPTATHERUM, *Beauvois*. From *pipto*, to fall, and *ather*, an awn. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Curious species of grass, requiring the same treatment as *Milium*. *Synonymes*: 1, *Milium cærulescens*; 2, *M. multiflorum*, *arundinaceum*; 3, *M. paradoxum*, *Arachne virescens*; 4, *Eriobloa punctata*. cærulescens 1 Apetal . 6, H. Grass 2 Barbary . 1819 multiflorum 2 Apetal . 6, H. Grass 3 S. Eur. . 1778 paradoxum 3 Apetal . 6, H. Grass 3 France . 1771 punctatum 4 Apetal . 6, H. Grass 3 S. Eur. .

PIPTOCLAINA, *Don*. From *pipto*, to fall, and *klaina*, a cloak; the calyx is deciduous. *Linn.* 5, Or. 1, Nat. Or. *Ehretiaceæ*. The seeds

of this annual should be sown on a hotbed, and in May or June the plants should be planted out in the open border. *Synonyme*: 1, *Heliotropium supinum*.

supina 1 . . Yel. wht. 6, H. A. 3 S. Eur. . 1640

PIQUERIA, *Cavanilles*. After Andreas Piqueria, a Spanish botanist. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *P. trinervia* is a pretty herbaceous plant; all the species are of easy culture, and are multiplied by divisions.

trinervia . . White . 7, H. Her. P. 2 Mexico . 1798

artemisioides, ovata, pilosa.

PIRI-JIRI. See *Haloragis citriodora*.

PIRIQUETA, *De Candolle*. Meaning not explained by Aublet. *Linn.* 5, Or. 3, Nat. Or. *Turneriaceæ*. For culture, &c., see *Turnera*.

villosa . . . Yellow . 7, S. A. 2 Guiana . 1826

PISCIDIA, *Linn.* The leaves, bark, and twigs are used for the purpose of stupifying fish; whence the name from *piscis*, a fish, and *cedo*, to kill. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. This genus, the Jamaica Dogwood, consists of two ornamental timber-trees, with spreading branches and pinnate leaves. Sandy loam suits them best, and cuttings may be rooted in sand, under a glass, in heat. *Synonyme*: 1, *Erythrina*. See *Daubentonia*.

carthagenensis 1 Dirty wt. S. Ev. T. 25 Carthage 1690

Erythrina . . . Dirty wt. S. Ev. T. 25 W. Indies 1690

PISCIDIUM. See *Lepidium Piscidium*.

PISIFORME, formed like a pea.

PISÓNIA, *Linn.* In honour of M. Piso, an eminent physician of Amsterdam. *Linn.* 7, Or. 2, Nat. Or. *Nyctaginaceæ*. Stove shrubs, of not much merit. *P. aculeata* is remarkable for its spiny branches, and for its glutinous and burry seeds, which fasten to whatever touches them. A mixture of peat and loam suits them best, and they are easily propagated by cuttings in the same sort of soil.

PITA PLANT. See *Agave americana*.

PISTACHIA-TREE. See *Pistacia*.

PISTÁCIA, *Linn.* Altered from *Foustaq*, its Arabic name. *Linn.* 22, Or. 5, Nat. Or. *Terebinthaceæ*. Ornamental plants. The greenhouse kinds thrive in loam and peat, and cuttings of the ripened wood root in sand, under a glass. The hardy species do best planted against a wall, as they are rather tender; common garden soil suits them, and they may be increased by layers, or cuttings in sandy soil under a glass. *Synonymes*: 1, *P. Lentiscus massiliensis*; 2, *P. officinarum*; 3, *P. reticulata*.

atlantica . . . Apetal 5, F. De. T. 10 Barbary . 1790

PISTIA. From *pistos*, aquatic. *Linn.* 13, Or. 6, Nat. Or. *Pistiaceæ*. These are singular plants, and only require to be thrown into the water in the stove, where they increase rapidly.

occidentalis . Wht. grn. 6, S. Aq. 4 W. Indies . 1843
stratiotes . . White . 6, S. Aq. 4 Jamaica . 1843

PISTIACEÆ, LEMNODS, or DUCK-WEEDS. These are all weeds, principally floating aquatics of no beauty, and scarcely worth cultivation.

PISTILLARIA, Erics. From *pistillum*, a pestle; form of the plants. *Linn.* 24, Or. 9, Nat. Or. *Agaricicææ*. The species constituting this genus are chiefly found on the decayed leaves of ferns—*micans*, *musciola*, *puberula*, *pusilla*, *quisquiliaris*.

PISTILLUM, or PISTIL, the columnar body in the centre of a flower, consisting commonly of three parts; viz., the ovary, style, and stigma.

PISTOLOCHIA. See *Aristolochia Pistolochia*.

PISTORINIA, De Candolle. The meaning is unknown to us. *Linn.* 10, Or. 5, Nat. Or. *Cras-sulacææ*. The seeds merely require sowing in light soil in any dry situation in the open border, or on rock-work, where it has a pretty appearance. *Synonyme*: 1, *Cotyledon hispánica*.

hispánica 1 . Red . . 6, H. . B. 4 Spain . 1796

PISUM, Linn. From *pis*, the Celtic word for pea; whence the Latin *pisum*. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ*. This genus affords one of the most valuable and well-known legumes, the Pea; and like most cultivated vegetables, it has produced numerous improved varieties, growing from a foot to twelve feet high. They prefer a rich dry soil, in which they may be sown at any season, according to the time when they are wanted. See *Ochrys*.

PITCH is obtained from various species of *Pinus*.

PITCHER-LEAF. See *Nepenthes Phyllanthophora*.

PITCHER-PLANT. See *Nepenthes*.

PITCHERS, hollow leaves having the appearance of pitchers.

PITH, medulla, occupying the centre of a stem or shoot.

PITOSPORACEÆ, or PITOSPORADS. Chiefly New Holland trees and shrubs; some, as the *Billardiæra*, are climbers, and bear eatable fruit.

PITOSPORUM, Banks. From *pille*, to pitch, and *sporos*, a seed; the seeds are covered with a resinous pulp. *Linn.* 5, Or. 1, Nat. Or. *Pittosporacææ*. All the species are very handsome shrubs, on account of their glossy foliage and pretty flowers, which render them well adapted for conservatories. *P. Tobira* will succeed against a south wall, with the protection of a mat in severe weather. All the species thrive well in a mixture of peat and loam, and ripened cuttings root in sand, under a glass. *Synonyme*: 1, *P. hirsutum*.

PLANE-TREE. See *Platanus*.

PLANK PLANT. See *Bossia scolopendria*.

PLANTAGINACEÆ, or **RIB-WORTS**. A small order of well-known herbaceous plants, scattered over the whole world. They are usually called plantains.

PLANTAGO, *Linn.* Derived from *planta*, the sole of the foot; resemblance in the leaves. *Linn.* 4, Or. 1, Nat. Or. *Plantaginaceæ*. A genus, the greater number of the species of which are mere weeds, of the easiest culture and propagation. *Synonymes*: 1, *P. sphærocéphala*; 2, *P. crispata*; 3, *P. rigida*; 4, *P. Cornuti*; 5, *P. Cornuti*; 6, *P. alpina*.

PLANTAGO. See *Alisma Plantago*.

PLANTAIN. See *Alisma Plantago*.

PLANTAIN. See *Plantago*.

PLANTAIN-TREE. See *Musa*.

PLÁNTIA, *Hcberl*. After Mr. Plant, a zealous and industrious experimental cultivator and nurseryman at Cheadle, who has raised some curious hybrids amongst this race of plants. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. This pretty and florid little plant was first introduced into this country as a *Moræa*, by Synott, and has since been raised at Spofforth, from Cape seeds, under the name of *Sisyrinchium*, to which genus refer for culture.

flava . . . Yellow . . 6, F. Bl. P. 1 C. G. H. . 1842

PLANT OF GLUTTONY. See *Cornus suecica*.

PLATANACEÆ, or **PLANE-TREES**. A small order of deciduous trees and shrubs. They form beautiful objects as landscape trees, and their close-grained timber is highly esteemed for indoor and cabinet work.

PLATANTHÈRA, *Richard*. From *platys*, broad, and *anthera*, an anther. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Pretty plants. For culture and propagation, see *Orchis*. *Synonymes*: 1, *Orchis bifolia*; 2, *Hubenaria ciliaris*; 3, *H. cristata*; 4, *H. dilatata*; 5, *H. fimbriata*; 6, *H. flava*; 7, *H. herbicola*; 8, *H. blephariglossis*; 9, *H. orbiculata*; 10, *H. hyperborea*; 11, *H. incisa*; 12, *H. psychodes*, *H. ladera*; 13, *H. gigantea*.

PLÁTANUS, *Linn.* From *platys*, ample; in allusion to the spreading branches and shady foliage. *Linn.* 21, Or. 9, Nat. Or. *Platanaceæ*. Noble trees, of peculiar grace and elegance, well fitted for large plantations, or to stand singly on a lawn. They are easily increased by layers, or cuttings planted out in autumn, in a sheltered situation. *Synonymes*: 1, *P. acerifolia*; 2, *P. cuneata*.

PLATYCÁRPHA. See *Cynara glomerata*.

PLATYCÁRPUM, Humboldt. From *platys*, broad, and *karpos*, fruit; in reference to the compressed seed-pod. *Linn.* 5, Or. 1, Nat. Or. *Bignoniaceæ*. This tree thrives in peat and loam; and half-ripened cuttings planted in sand, and placed under a hand-glass, root readily. If the plants are kept rather dry in winter, it will tend to throw them into flower. orinocense . Pa. rose 5, S. Ev. T. 20 Orinoco . 1813

PLATYCERIUM, Desvaux. From *platys*, broad, and *keras*, a horn. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove ferns. *Synonymes*: 1, *Acróstichum alcidôrme*; 2, *Polypodium grande*; *Acróstichum bifôrme*, A. grande, A. fusifôrme; 3, A. stemmária.
 alcidôrme 1 . Brown . 8, G. Her. P. 3 N. S. W. . 1908

 grande . Brown . 7, S. Her. P. 1 1/2 Moreton B. 1828
 stemmária 3 Brown . 5, S. Her. P. 1 1/2 Guinea . 1822

PLATYCHILUM, Delaunay. From *platys*, broad, and *cheilos*, a lip; breadth of corolla. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. A beautiful plant, requiring the same treatment as the *Hoveas*. *Synonyme*: 1, *Gompholobium Celsianum*.
 Celsianum 1 . Yellow . 6, G. Ev. S. 3 N. Hol. . 1820

PLATYCDON, De Candolle. From *platys*, broad, and *kodon*, a bell; the flowers are broad and bell-shaped. *Linn.* 5, Or. 1, Nat. Or. *Campanulaceæ*. A neat, elegant genus when in flower; it grows best in sandy loam, and may be increased by seeds or young cuttings. *Synonymes*: 1, *Campanula grandiflora*; 2, P. komalanthum.
 grandiflorum 1 Blue . 6, H. Her. P. 1 Dahuria. 1782
 album semip . White . 7, G. Her. P. 1 China . 1845
 plenum . Blue . 7, H. Her. P. 1 China . 1845
 chinense 2 . Blue . 7, H. Her. P. 1 China . 1845

PLATYLOBBIUM, Smith. From *platys*, broad, and *lobos*, a pod; in reference to the broad legumes. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. Free-flowering shrubs, of rather difficult culture; they require a mixture of three-parts sandy peat and one part loam; the pots must be carefully drained, to allow the water to pass off freely, and care must be taken not to over-water them. They may be propagated by cuttings in sand, under a glass; or by seeds, which are sometimes produced in abundance.

PLATYLOPHUS, D. Don. From *platys*, broad, and *lophos*, a crest; the capsule, from being much compressed at the apex, appears as if winged. *Linn.* 10, Or. 2, Nat. Or. *Cunoniaceæ*. The White Ash of the English colonists is an elegant tree. It succeeds well in a mixture of loam and peat; and cuttings of the ripened wood root freely in sand, under a glass. *Synonyme*: 1, *Weinmannia trifoliolata*.
 trifoliatus 1 . White 5, G. Ev. T. 45 C. G. H. . 1820

PLATYPÉTALUM, Hooker. From *platys*, broad, and *petalum*, a petal. *Linn.* 15, Or. 2, Nat. Or. *Brassicaceæ*. An Alpine plant, requiring to be grown in a pot filled with a mixture of peat and sand, and treated like other plants of similar habits.
 purpurascens Purple . 5, H. Her. P. 4 Melville I. 1827

PLATYPTERIS, Humboldt and Bonpland. From *platys*, broad, and *pteron*, a wing; appendage to the seed. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. A small plant of little beauty, growing in any peaty soil, and increased by cuttings, in the same kind of soil, under a glass. *Synonyme*: 1, *Spilánthes crocatus*.
 crocata 1 . Orange . 3, S. Her. P. 2 S. Amer. . 1812

PLATYSPERMUM, Hooker. From *platys*, broad, and *sperma*, a seed. *Linn.* 6, Or. 2, Nat. Or. *Brassicaceæ*. Mere annual weeds, growing in any garden soil. *Synonymes*: 1, *Caulalis littoralis*; 2, C. orientalis; 3, *Daucus muricatus* — littoralis 1, orientalis 2, o. pulcherrimum, muricatum 3.

PLATYSTEMON, Benth. From *platys*, broad, and *stemon*, a stamen. *Linn.* 13, Or. 1, Nat. Or. *Ranunculaceæ*. A genus of rather pretty annuals, growing freely in sandy loam.
 californicus . Yellow . 8, H. A. 1 Californ. . 1833
 leiocarpus . Yellow . 7, H. A. 1 Siberia . 1837

PLATYSTIGMA, Benth. From *platys*, broad, and *stigma*; the stigma is ovate. *Linn.* 13, Or. 1, Nat. Or. *Ranunculaceæ*. This plant somewhat resembles *Platystemon californicus*, and requires the same treatment as that plant.
 lineare . Yellow . 5, F. Her. P. 3 California . 1833

PLATYSTYLIS, Sweet. From *platys*, broad, and *stylos*, a style; in allusion to the dilated style. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. A very handsome genus of flower-border plants. For culture and propagation, see *Orobis*. *Synonymes*: 1, *Orobis cyaneus*; 2, O. sessilifolius; 3, O. stipulaceus.
 cyanea 1 . Purple . 5, H. Her. P. 1 Caucasus 1823
 sessilifolius 2 Purple . 5, H. Her. P. 1 Tauria . 1823

PLEUROGRÁMMA, *Presl*. From *pleura*, a side, and *gramma*, a writing. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove fern. *Synonyme*: 1, *Grammitis linearis*.

linearis . Brn. yel. . 6, S. Her. P. 1/4 Jamaica . 1823

PLEURÓGYNE, *Don*. From *pleura*, a side, and *gyne*, a female; stigmas joined to the sides of the ovary. *Linn.* 5, Or. 2, Nat. Or. *Gentianaceæ*. This plant is rather difficult to cultivate. The soil in which the seed is sown should have a large proportion of powdered chalk mixed with it. *Synonymes*: 1, *Gentiana rotata*, *Suertia rotata*.

rotata 1 . . Blue . 8, H. A. 1/3 Siberia . 1827

PLEUROSPÉRMUM, *Hoffmann*. From *pleuron*, a rib, and *sperma*, a seed; in allusion to the membranes of the pericarps both having ribs. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A genus of no interest, growing in any common soil, and readily increased by seeds. *Synonyme*: 1, *Ligasticum austriacum*—austriacum, uralense.

PLEUROTHÁLLIS, *R. Brown*. From *pleuron*, a side or rib, and *thallo*, to flower; in allusion to the one-sided disposition of the flowers of some of the species. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a genus of curious little plants, well fitted for cultivating on wood, in the same way as *Burlingtonia*. *Sy-*

PLICATE, plaited; 3, 4, or 5, plicate, means 3, 4, or 5 plaited.

PLCACA, Aiton. From *plukamos*, bent hairs; alluding to the pendulous branches. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. The plant grows best in a mixture of loam and peat; and it may be readily propagated by cuttings, in sand, under a glass.

pendula . . . White . . . G. Ev. S. 2 Canaries . 1772

PLOUGHMAN'S SPIKENARD. See *Baccharis*.

PLUCHÆA, De Candolle. See *Conyza*.

PLUKENËTIA. Named by Plumier in honour of Leonard Plukenet, an English botanist. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. Uninteresting stove climbers, growing in a light loamy soil; increased by cuttings, under a glass, in sand—*erruciosa*, *volubilis*.

PLUM. See *Prunus*.

PLUMBAGINACEÆ, or LEAD-WORTS. Are small under-shrubs or herbaceous plants, bearing, in many cases, showy flowers both for the greenhouse and open air. Several species are useful in medicine.

PLUMBAGINELLA, Spach. The diminutive of *Plumbago*. *Linn.* 5, Or. 1, Nat. Or. *Plumbaginaceæ*. Of simple culture; the seeds only require to be sown in the open ground in a warm situation. *Synonyme*: 1, *Plumbago micrantha*.

micrantha 1 . . . White . . . 7, H. . . A. 2 Persia . 1829

PLUMBAGO, Linn. From *plumbum*, a disorder in the eyes, which some species were formerly said to cure. *Linn.* 5, Or. 1, Nat. Or. *Plumbaginaceæ*. Pretty free flowering plants, growing in any common soil, and increased readily by cuttings. The root of *P. europæa*, it is said, when chewed, will cure the toothache. *Synonymes*: 1, *P. zeylanica*, *scandens*; 2, *Plumbagidium roseum*, *Thalia coccinea*; 3, *Valeradia plumbaginoides*. See *Valeradia* and *Plumbaginella*.

PLUMIERIA, Linn. In honour of C. Plumier, a celebrated French botanist. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. A genus of very fine flowering plants, growing best in a light loamy soil, or a mixture of peat and loam; large cuttings, with their leaves on, after being dried for a few days, will grow freely in pots of mould, without being watered. The plants, when in a dormant state, must be kept dry, otherwise they do not flower freely. *Synonymes*: 1, *P. tricolor*; 2, *P. Gouani*.

PLUMOSE, resembling feathers.

PLUMOSUS, feathery, downy.

PLUMULE, the young leaf in the embryo.

PLURILOCULAR, having many cells.

PLUVIALIS, expanding in wet weather.

PNEUMONANTHE. See *Gentiana*.

POA, *Linn.* From *poa*, signifying grass or herbage. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*.

This genus contains some valuable hay and pasture grasses, succeeding well in rich loamy soil; some of the species are aquatic, growing only in water or very moist situations; increased by seeds, or divisions of the roots.

Synonymes: 1, *Arundo poaeformis*; 2, *P. thermalis*; 3, *P. flexuosa*. See *Airōpsis*, *Eragrostis*, *Hydróchloa*, *Leptóchloa*, *Megastachya*, *Scleróchloa*, *Tricóspis*, and *Triodia*.

PODOPHYLLUM, *Linn.* Abridged from *Anapodophyllum*, a word signifying a duck's-foot; the leaves bear some resemblance to that; whence the English name Duck's-foot. *Linn.* 13, Or. 1, Nat. Or. *Podophyllacæ*. This plant requires a moist shady situation, and to be grown in peat soil; increased by division at the root. See *Jeffersonia*.

- peltatum . White . 5, H. Her. P. 1 N. America 1664
PODOPTERIS, *Humboldt and Bonpland*. From *pous*, a foot, and *pteris*, a wing. *Linn.* 6, Or. 3, Nat. Or. *Polygonacæ*. A handsome plant, requiring to be planted in an equal mixture of loam and peat; young cuttings planted in any light mould, under a glass, will root readily.
 mexicanus . Pink . 7, G. Ev. S. 2 Mexico . 1825

PODORIA. See *Bœcia*.

PODOSPERMUM, *De Candolle*. From *pous*, a foot, and *sperma*, a seed. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Pretty plants, producing flowers resembling those of *Scorzonera*; they thrive in any common soil, and plants may be raised from seed. The annual and biennial kinds only require sowing in the open border. *Synonyme*: 1, *Scorzonera taraxacifolia*. See *Podotheca*.

PÔHLEA, *Hedis*. In honour of J. E. Pohl, a German botanist. See *Brjum*.

POHON-UPAS. See *Antiaris toxicaria*.

POINSETTIA, *Graham*. In honour of Mr. Poinsette, who discovered the plant in Mexico in 1823. *Linn.* 21, Or. 1, Nat. Or. *Euphorbiacæ*. This is a truly splendid and very desirable genus, growing well in good open, rather sandy loam, mixed with a little vegetable mould; and in order to keep the plants in a clean, free-growing state, they should have plenty of water at the roots, and be frequently syringed over the leaves and branches. In spring, before the plants are potted, or the buds begin to push, the branches of the previous year should be cut down to within three or four eyes of the old wood. These parts should be laid to dry for a few days, and then made into cuttings, and planted in sand, or sand and

loam mixed; if placed in a gentle bottom heat, with a glass over them, they will root very readily, but before the cuttings are planted in the soil, they should be dried for a day or two in an airy part of the house.

pulcherrima Brt. scar. . 3, S. Ev. S. 3 Mexico. 1834
albida . . White. . 12, S. Ev. S. 3 Mexico. 1834

POINCIANA, De Candolle. In honour of M. de Poinci, once governor of the Antilles, and a patron of botany. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. This genus, the Barbadoes Flower-fence, is truly elegant and ornamental. *P. pulcherrima* is a spiny plant, growing about twelve feet high, the bruised leaves of which emit an odour resembling Savin. They require a good rich soil, and a strong heat to make them flower well in our stoves; cuttings will strike readily in sand. They sometimes produce seed, from which they may also be increased. See *Coultèria*.

POLANISIA, Rafinesque. From *poly*, many, and *anisos*, unequal; stamens numerous and unequal. *Linn.* 11, Or. 1, Nat. Or. *Cappari-dacææ*. A genus of pretty plants, growing about a foot and a half high. They require to be sown in a hotbed frame, and turned out

into a sheltered situation in the open border, about the middle of May. *Synonymes*: 1, *Cledme Chelidonii*; 2, *C. dodecandra*; 3, *C. dodecandra Canadensis*; 4, *C. uniglandulosa*; 5, *C. viscosa*; 6, *C. icosandra*.

POLEMONIACEÆ, or PHLOX-WORTS. A large order, including some of the most beautiful herbaceous plants in the flower borders, and some handsome shrubs in the greenhouse. The *Phlox* and *Cantua* may be cited as examples.

POLEMONIUM, Linn. From *polemos*, war; Pliny says this plant gained its name from having caused a war between two kings, each of whom claimed the honour of having first discovered its virtues. *Linn.* 5, Or. 1, Nat. Or. *Polemoniaceæ*. Ornamental border plants. *P. cæruleum* is one of long standing. They are all of the easiest culture and propagation. *Synonymes*: 1, *P. bursifolium*; 2, *P. humilis*.

POLIANTHES, Linn. From *poly*, many, and *anthos*, a flower; abundance of flowers. *Linn.* 6, Or. 1, Nat. Or. *Liliacææ*. Highly odoriferous plants. *P. tuberosa* is the well-known Tuberose. The bulbs are imported annually, principally from Italy; they flower well if planted in a mixture of sandy loam and rotten dung, or leaf-mould, with a moderate supply of water; they require to be brought forward in a hotbed frame or pit; when in flower, they may be placed in a greenhouse or warm room, where they will remain a considerable time in blossom.

POLIUM. See *Teucrium Polium*.

POLLEN, powder contained in the anthers, composed of globules, and containing the fecundating fluid; also the bloom of leaves.

POLLICHA, Linn. In honour of John Adam Pollich, M.D., author of a History of the Plants of the Palatinate of the Rhine. *Linn.* 1, Or. 1, Nat. Or. *Ullebracææ*. An obscure plant, of the simplest culture.

campêstris . . Apetal . 9, F. Her. P. 6 C. G. H. 1780

POLLINIA, Linn. After Cyrus Pollini, a professor of botany at Verona. *Linn.* 23, Or. 1,

Nat. Or. *Graminaceæ*. A genus of worthless grasses, growing in any common soil, and increased by dividing the root. *Synonymes*: 1, *Andropogon distachyos*; 2, *A. striatus*; 3, *A. undatus*—*distachya* 1, *striata* 2, *undata* 3. See *Chrysopogon*.

POLY. See *Tedderium Polium*.

POLYACHYRUS, *De Candolle*. From *poly*, many, and *achuron*, chaff. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. For culture, see *Chrysanthemum*.

auritus . . . Blue . . . 6, F. Her. P. 1½ Chili . 1830

POLYACTIDIUM. See *Erigeron delphinifolium*.

POLYANDROUS, having more than twenty stamens inserted in the receptacle.

POLYANGIUM, *Link.* From *poly*, many, and *angium*, a capsule; many peridiiums. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. A species of *Fungus*, about the size of a grain of sand, found on damp trunks of trees—*vitellinum*.

POLYANTHUS. See *Primula vulgaris* and *clatior*; also *Narcissus Tazetta*.

POLYBOTRYA, *Humboldt*. From *poly*, many, and *botrys*, a raceme; fertile division of frond. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Handsome species of Fern, delighting in a hot humid atmosphere, and turfy peat soil; increased by division at the roots, or by seeds.

POLYGALA, *Linn.* From *poly*, much, and *gala*, milk; reputed effects of the plant on cattle that feed upon it. *Linn.* 17, Or. 3, Nat. Or.

Polygalaceæ. All the species of this genus are very showy. The greenhouse kinds thrive well in one part turfy loam, and three parts peat, with a quantity of sand mixed in it. To obtain cuttings fit for planting, the shoots should be topped, which will cause them to push out numerous young ones; these should be taken off close when in a growing state, about three inches long, planted in pots of sand under glass, and placed in the propagating house; the glasses must be occasionally taken off and wiped. The hardy perennial kinds thrive in a peat soil, and increase freely by seeds or divisions of the roots. The annual kinds require sowing in the open ground, preferring a peat soil. The root of *P. Sévga* is diuretic, expectorant, purgative, emetic, and sudorific; it has been used with success in croup, and as a cure against the bite of venomous reptiles. According to Barton, *P. sanguinea* possesses similar qualities. *Synonymes*: 1, *P. oppositifolia*; 2, *P. cordifolia*; 3, *P. grandiflora*; 4, *P. viridescens*; 5, *P. sanguinea*. See *Mandia* and *Muraltia*.

POLYGALACEÆ, or MILK-WORTS. Small shrubs and herbaceous plants; many very pretty, especially the greenhouse kinds. Some bear eatable fruit, as *Mundia spinosa*, others supply a red dye, as *Rhatany-root* (*Kramèria*), and others are useful in medicine.

POLYGAMOUS, when some flowers are male, some female, and others hermaphrodite, on the same plant.

POLYGONACEÆ, or BUCKWHEATS. There are few parts of the world which do not acknowledge the presence of plants of this order. In Europe, Africa, North America, and Asia, they occupy ditches, hedges, and waste grounds, in the form of Docks and Persicarias; the fields, mountains, and heaths, as Sorrels, and trailing or twining Polygonums; in South America and the West Indies they take the form of Coccolobas, or Sea-side-grapes; in the Levant, of Rhubarbs; and even in the desolate regions of the North Pole they are found in the shape of *Oxyria*.—*Veg. Kingd.*

POLYGONATUM, Desfontaines. From *poly*, many, and *gonu*, a knee; referring to the numerous joints of the stem. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Pretty border plants, growing about two feet high in any rich soil, and readily increased by seed or divisions of the root. *Synonymes*: 1, *P. latifolium*; 2, *Convallaria verticillata*; 3, *C. Polygonatum*.

POLYGONUM, Linn. Derivation same as that of *Polygonatum*. *Linn.* 8, Or. 3, Nat. Or. *Polygonaceæ*. The species of this genus grow freely in any light rich soil. The perennial kinds are readily increased from seeds, or by divisions of the root. The hardy annual species merely require sowing in the open ground. The tender kinds must be raised on a gentle hotbed, and transplanted into the flower-border. Some species, such as *P. Hydro Piper*, are extremely acrid, and said to blister the skin. The seeds of *P. Fagopyrum* and *tataricum* are used as food, and according to Humboldt, the leaves of *P. hispidum* are used in

South America as a substitute for tobacco. *Synonymes*: 1, *P. petiolatum*; 2, *P. elegans*; 3, *P. flagellare*; 4, *Ampelgonum chinensis*, *Polygonum brachiatum*. See *Tragopyrum*, *Fagopyrum*, and *Sarcogonium*.

POLYDORPHOUS, assuming various forms.

POLYDŌTUS. See *Asclēpias longifolia*.

POLYPÉTALOUS, having many petals.

POLYPHORE, an elongated receptacle, which bears many ovaries, but not the petals or stamens.

POLYPODIACEÆ, or **FERNS**. A very extensive order of flowerless plants—familiar to most persons. They all contain a thick astringent mucilage, useful in medicine, and several species supply in their rhizomes a large proportion of nutritive food.

POLYPŌDIUM, *Swartz*. From *poly*, many, and *pous*, a foot; numerous root-like feet. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. A genus of very ornamental ferns. The stove and greenhouse species require, to grow them well, a mixture of loam and peat. The hardy kinds are well adapted for ornamenting rock-work, or they may be grown in pots, in light loamy soil. All the species may be readily increased by dividing the roots, or by spores. *P. crassifolium* is said to be sudorific and anti-rheumatic. In the Sandwich Islands, they use the bruised fronds of *P. phymatodes* to perfume the cocoa-nut oil. *Synonymes*: 1, *P. scandens*; 2, *Davallia contigua*; 3, *P. multifidum*; 4, *P. latifolium*; 5, *Arthropteris filipes*. See *Allantodia*, *Aspidium*, *Asplenium*, *Cheilanthes*, *Gymnogramma*, *Mentiscium*, *Niphobolus*, and *Xiphopteris*.

POLYPODY. See *Polypodium*.

POLYPŌGON, *Desfontaines*. From *poly*, many and *pogon*, a beard. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Grasses, thriving in any common soil, and increased by seeds or divisions of the roots. *Synonymes*: 1, *Agrostis setosa*; 2, *A. littoralis*.

littoralis 2. . Apetal . 7. H. Grass 1 Brit., sea shore.
monsipeliensis Apetal . 7. H. Grass 1 Brit., way sides.

glomeratus 1, *maritimus*, *talarius*.

POLYPORUS, *Michaux*. Derived from *poly*, many, and *poros*, a pore; the under surface is full of pores. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. These species of *Fungi* are found in pastures, trunks of trees, &c. *Synonyme*: 1, *Boletus velutinus* — *abietinus*, *adustus*, *amorphus*, *armeniacus*, *betulinus*, *brumalis*, *cæsius*, *Carmichaelianus*, *castaneus*, *cinctus*, *cuticularis*, *ferruginosus*, *fomentarius*, *fraxineus*, *frondosus*, *giganteus*, *heteroclitus*, *hispidus* 1, *igniarius*, *incarnatus*, *lentus*, *leptocéphalus*, *lucidus*, *modulla-panis*, *molluscus*, *nigricans*, *pachyppus*, *p. olivaceus*, *pallescens*, *pellucidus*, *perennis*, *radiatus*, *reticulatus*, *Ribis*, *scoticus*, *spongiosus*, *spumans*, *squamosus*, *suaveolens*, *s. salicinus*,

sulphureus, strobiliformis, ulmarius, undatus, varius, v. lateralis, v. nummularis, velutinus, versicolor, vulgaris.

POLYPTERIS, Nuttall. From *poly*, many, and *pteron*, a wing. *Linn.* 19, Or. 1, Nat. Or. *Aspteraceæ*. A pretty little plant, requiring the same treatment as other rather tender annuals. *Synonymes*: 1, *Hymenopappus integrifolius*. *integrifolia* 1. White. 7, H. A. 1 Georgia 1823

POLYRHIZA, having many roots.

POLYSACCUM, Desfontaines. From *poly*, many, and *sakkos*, a sack. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. Minute *Fungi*, found in damp places—*olivaceum*.

POLYSIPHONIA, Greville. From *poly*, many, and *siphon*, a tube; in allusion to the numerous little canals by which the coloured matter is carried through the different parts of the plant. *Linn.* 24, Or. 7, Nat. Or. *Ceramidiaceæ*. Very singular plants, found in the ocean, on the seashore, rocks, &c.—*Agardhiæna*, *allôchroa*, *atrorubescens*, *badiæa*, *Brodiaei*, *byssoides*, *coccinea*, *c. denudata*, *c. tenuior*, *cristata*, *divaricata*, *elongata*, *c. denudata*, *c. sanguinolenta*, *elongella*, *fastigiata*, *filamentosa*, *fruticulosa*, *furcellata*, *gracilis*, *macrocarpa*, *nigræscens*, *n. pectinata*, *parasitica*, *recurva*, *Richardsoni*, *spinulosa*, *thuyoides*, *urceolata*, *violacea*, *v. major*.

POLYSPORA, Sweet. From *poly*, many, and *spora*, a seed; many seeds in a capsule. *Linn.* 16, Or. 8, Nat. Or. *Cernstemideæ*. This handsome shrub requires a mixture of loam and peat; and cuttings, when the wood is not too ripe, will root in sand, under a glass, in heat; it may likewise be increased by grafting on the single red *Camellia japonica*. *Synonymes*: 1, *Camellia axillaris*, *Gordonia anomala*.

axillaris 1. White. 3, S. Ev. S. 3 E. Indies. 1818

POLYSTACHYA, Hooker. From *poly*, many, and *stachys*, a spike. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Rather interesting plants; for culture and propagation, see *Burlingtonia*.

POLYSTIGMA, Persoon. From *poly*, many, and *stigma*, a mark. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceæ*. Very minute species of brown *Fungi*, found in autumn on live sloe and bird-cherry leaves—*fulvum*, *rubrum*.

POLYTANUM, Desv. From *poly*, many, and *tana*, a fillet; resemblance of fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove ferns. See *Vittaria*.

POLYTHRINCUM, Kunze. From *poly*, many, and *thrikos*, a little division. *Linn.* 24, Or. 9, Nat. Or. *Botrydiaceæ*. A very small species, growing on clover-leaves, in the form of numerous black spots of unequal size—*Trifolii*.

POLYTRICHUM, Linn. From *poly*, many, and *thrix*, a hair; in allusion to the hairy calyptra. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. Very pretty species of moss, with rigid leaves, and the theca of a square form, mostly covered with a hairy calyptra; found on moist banks, among heath, &c. *Synonymes*: 1, *P. rubellum*; 2, *P. gracile*; 3, *P. strictum*; 4, *P. subrotundum*; 5, *P. sexangulare*—*aloides*, a. Dicksoni, a. majus 1, alpinum, commune, c. attenuatum 2, c. yuccæfolium, hercynicum, juniperinum, j. gracilius 3, nanum 4, piliferum, septentrionale 5, undulatum, ungerum.

POMACEÆ, or **APPLE-WORTS**. Are well-known trees and shrubs, and the fruit they bear form an article of dessert, and others are used for culinary purposes.

POMADERRIS, Labillardiere. From *poma*, a lid, and *derris*, a skin; alluding to the membranous covering of the capsule. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. A beautiful early-flowering genus, very nearly akin to *Willemetia*, which genus see for culture and propagation. *Synonymes*: 1, *Ceanothus capsularis*; 2, *C. globulosus*; 3, *C. spatulatus*; 4, *C. Wendlandianus*.

POMARIA, *De Candolle*. In honour of M. Pomar, physician to Philip III., of Spain. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. It grows in a mixture of peat, loam, and leaf-mould, and is increased by cuttings and seeds.

glandulosa . Yellow . 5, G. Ev. S. 2 N. Spain. 1826

POMAX, *Solander*. From *poma*, an operculum; alluding to the operculum of the fruit. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. For the culture and propagation of this species, see *Opercularia*. *Synonyme*: 1; *Opercularia umbellata*. hirta 1 White . 7, G. Ev. S. 1 N. Holl. 1826

POMBALIA, *Vandelli*. In honour of S. J. de Carvalho, Marquis de Pombal, a famous Portuguese statesman. *Linn.* 5, Or. 1, Nat. Or. *Violaceæ*. An interesting plant, growing best in an equal mixture of sandy loam and peat; it may be increased by young cuttings in the same kind of soil, under a glass, in heat, or by seeds. *Synonyme*: 1; *Ionidium Ipecacuanha*. Ituba 1 White . 7, S. Her. P. 1 Brazil. 1822

POMEGRANATE. See *Punica*.

POMIFEROUS, apple-bearing.

POMPEL-MOOSE. See *Citrus aurantium*.

POMPION. See *Cucurbita*.

POMPONIUM. See *Lilium Pomponium*.

PONCELETTIA, *R. Brown*. After Mr. Poncelet, author of a Treatise on Wheat. *Linn.* 5, Or. 1, Nat. Or. *Epacridaceæ*. A very pretty plant; for culture and propagation, see *Epacris*. sprengelioides . Scarlet 5, G. Ev. S. 1 N. S. W. 1826

PONCELETTIA. See *Astmina*.

POND-PINE. See *Pinus serotina*.

POND-WEED. See *Potamogeton*.

POND-WEED. See *Zannichellia*.

PONERA, *Lindley*. From *poneros*, miserable; alluding to the wretched appearance of the species. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a genus of no beauty, and will perhaps be found to succeed best when attached to a piece of wood, in the same manner as the species of *Pleurothallis*. *Synonyme*: 1; *Nemacônia graminifolia*, *P. juncifolia*.

graminifolia 1 Buff . . 5, S. Epi. 2 Mexico . 1837

PONTHIEVA, *R. Brown*. Named in honour of M. de Ponthieu, a French West Indian merchant, who sent a number of plants to Sir Joseph Banks. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These curious plants grow well in a mixture of sandy loam and peat, with the pots well drained. They require to be kept dry when not in a growing state.

glandulosa . . Green . 2, S. Ter. 1 W. Indies . 1800

petiolata . . Brown . 2, S. Ter. 1 St. Vincent. 1822

POOR-MAN'S PEPPER. See *Lepidium latifolium*.
POOR ROBIN'S PLANTAIN. See *Hieracium vendsum*.

POPAYAN-TEA. See *Melastoma Theezans*.

POPLAR. See *Populus*.

POPPY. See *Papaver*.

PÓPULUS, *Tournefort*. Some derive the word *Populus* from *paipallo*, to vibrate or shake; others suppose it obtained its name from being used in ancient times to decorate the public places in Rome, where it was called *arbor populi*, or the tree of the people. *Linn.* 22, Or. 7, Nat. Or. *Salicaceæ*. Most of the species of poplar are very ornamental, more especially in early spring, when the catkins of the males are produced. Their favourite place of growth is in moist soil near a running stream; but they do not thrive in very marshy situations. All the species are readily increased by cuttings or layers, and some by suckers. *Synonymes*: 1, *P. nivea*; 2, *P. suaveolens*; 3, *P. viminalis*, *P. longifolia*; 4, *P. macrophylla*; 5, *P. acerifolia*; 6, *P. dilatata*; 7, *P. acaulescens*; 8, *P. levigata*; 9, *P. supina*; 10, *P. canadensis*; 11, *P. balsamifera*; 12, *Tacamahaca*.

PORANA, *Linn.* From *poreno*, to journey; branches extending to a great distance. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceae*. An ornamental genus, requiring a mixture of loam and peat, and increased by seeds. *Synonyme*: 1, *Dinethus racemosus*. See *Dinethus*.

paniculata . . .	White . . .	10, S. Ev. Cl. 40	E. Ind. 1823
racemosa 1 . . .	White . . .	7, H. Cl. A. 20	Nepal. 1823
volubilis . . .	White . . .	7, S. Ev. Tw. 40	E. Ind. 1820

PORANTHERA, *Rudge*. From *poros*, a pore, and *anthera*, an anther. *Linn.* 5, Or. 3, Nat. Or. *Euphorbiaceae*. This ornamental species grows freely in a mixture of sandy loam and peat, and young cuttings will root readily if planted in sand, under a glass.

ericifolia . . .	White . . .	7, G. Ev. S. ½	N. Holl. 1824
------------------	-------------	----------------	---------------

PORCUPINE. See *Chaetaria hystrix*.

PORCUPINE. See *Hordcum hystrix*.

PORES, apertures in the cuticle, through which transpiration takes place, or apertures in the anthers through which the pollen is ejected.

PORINA, *Acharius*. From *porinos*, anything that crumbles away. *Linn.* 24, Or. 9, Nat. Or. *Parmeliaceae*. A curious species, found on the bark of trees, &c.—*peritusa*.

PORLIERA, *Ruiz and Pavon*. In honour of Andrew de Porlier, a Spanish patron of botany. *Linn.* 8, Or. 1, Nat. Or. *Zygophyllaceae*. A curious and ornamental shrub, with leaves the linear leaflets of which remain open in serene weather, and contract before rain. It grows in a mixture of loam and peat, and ripened cuttings will root in sand, under a glass, in heat.

hygrométrica . . .	Grn. wht. . .	4, S. Ev. S. 2	Peru 1820
--------------------	---------------	----------------	-----------

POROPHYLLUM, *De Candolle*. From *poros*, a pore, and *phyllon*, a leaf; porous leaves. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*.—*unifolium*.

POROPHYLLUS, having porous leaves.

PORPAX, *Lindley*. From *porpax*, a button; in allusion to its pseudo-bulbs. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. No genus of Orchids has yet been described, writes Dr. Lindley in the autumn of 1845, which will include this curious plant. It approaches nearest to the *Eria*, but it has the habit of *Trichas*, and the calyx of the *Masdevallia*.

reticulata . . .	Pur. red . . .	3, S. Epi. 1	E. Indies 1844
------------------	----------------	--------------	----------------

PORPHYRA, *Agardh*. From *porphyra*, purple; the colour of the species. *Linn.* 24, Or. 7, Nat. Or. *Conferaceae*. Curious purple species, found during summer on the sea-shore. *P.*

lacinia is stewed, and considered a great luxury—*lacinia*, *purpurea*.

PORPHYROCOME, *Hooker*. From *porphyra*, purple, and *koma*, head; in allusion to the purple heads of flowers. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceae*. A very beautiful flowering stove plant, easily increased by cuttings, and succeeding when treated like the species of *Ruellia*. lanceolata . Violet 4, S. Ev. S. 1 S. America . 1845

PORRECTUS, stretched out, diffuse.

PORRUM. See *Allium Porrum*.

PORTENSCHLAGIA. See *Eleodendron*.

PORTLANDIA, *P. Browne*. Named in honour of the Duchess of Portland, a great patroness of botany. *Linn.* 5, Or. 1, Nat. Or. *Rubiaceae*. Superb plants, worthy of a place in every collection, on account of their large showy flowers. They require a mixture of sandy loam and peat; and cuttings, with their leaves whole, will root in sand, under a glass, in heat. A strong heat is necessary for them; without that, they will never grow well. See *Contarea*. coccinea . . . Scarlet . 6, S. Ev. S. 6 Jamaica . 1812

grandiflora . . .	White . . .	6, S. Ev. S. 10	Jamaica . 1775
platántha . . .	White . . .	6, S. Ev. S. 3	S. Amer. 1848

PORTLAND SAGO is formed from the dried and powdered roots of the common Wake-robin (*Arum maculatum*) of our hedge banks.

PORTUGAL LAUREL. See *Cerasus lusitanicus*.

PORTULACA, *Linn.* From *porto*, to carry, and *lac*, milk; juicy nature of the plants. *Linn.* 11, Or. 1, Nat. Or. *Portulacaceae*. The seeds of the hardy annual species of this genus may be sown in a sheltered part of the flower-garden in spring. The stove and greenhouse kinds require the same treatment as other stove and greenhouse annuals. *Synonymes*: 1, *P. grandiflora rutila*. See *Talium*.

PORTULACACEAE, or **PURSLANES**. Succulent shrubs and herbs. Some are very pretty, and are ornaments to the flower-garden in summer.

PORTULACARIA, *Jacquin*. Altered from *Portulaca*. *Linn.* 5, Or. 1, Nat. Or. *Portulacaceae*. This plant, the African Purslane-tree, will grow well in any dry light soil; and young cuttings, taken off and dried for a few days, when potted, will root freely. The plant has never flowered in British gardens.

POTAMOPHILA, R. Brown. From *potamos*, a river, and *philos*, to love. Linn. 23, Or. 1, Nat. Or. *Graminææ*. A worthless species of grass, growing in any wet situation, and increased by divisions—*parviflora*.

POTASH is obtained in large quantities from the species of *Salsola*.

POTATO. See *Solanum tuberosum*.

POTATO, SWEET. See *Batatas edulis*.

POTATO-BARLEY. See *Pearl barley* and *Scotch barley*.

POTATO-OAT. See *Avena nuda*.

POTENTILLA, Linn. From *potens*, powerful; supposed medical qualities of some of the species. Linn. 12, Or. 3, Nat. Or. *Rosææ*. Some of the species are very handsome when in flower. They grow in any common garden soil, and increase freely by dividing the roots, or by seeds. The shrubby kinds are well adapted for the front of shrubberies, and are propagated in autumn by cuttings planted in a sheltered situation. *Synonymes*: 1, *P. aurea*, *P. Halleri*, *P. salisburgensis*; 2, *P. leucoglylla*; 3, *P. pumila*; 4, *P. thuringiaca*; 5, *P. subnuda*, *filiformis*; 6, *P. nepalensis*; 7, *P. fragariastrum*; 8, *P. dahurica*; 9, *P. floribunda*; 10, *P. POTIRA, or **POTIRON**. See *Cucurbita Potira*.

POT-MARIGOLD. See *Calendula officinalis*.

POUCH, a little sack or bag at the base of some petals and sepals.

POUNCE is the powdered gum resin procured from *Juniperus communis*.

POUPARTIA, *Commerson*. The tree is called Bois de Poupert, in the Island of Bourbon. *Linn.* 10, Or. 4, Nat. Or. *Rhamnaceæ*. An ornamental genus. For culture and propagation, see *Spéndias*. *Synonymes*: 1, *Spéndias dulcis*; 2, *S. mangifera*.

mangifera 2 . .	White . 6, S. Ev. T. 50	E. Indies 1820
borbonica . . .	Purple . 6, S. Ev. T. 40	Bourbon 1825
dulcis 1 . . .	White . 6, S. Ev. T. 50	Java . 1793

POURRETIA, *Ruiz* and *Pavon*. In honour of Abbé Pourret, a French botanist and traveller in Spain. *Linn.* 6, Or. 1, Nat. Or. *Bromeliaceæ*. An ornamental genus of plants, growing freely in a mixture of sandy loam and peat; they are increased by suckers, or by seeds. See *Billbergia* and *Puya*.

coriacea . . .	Blue . 6, S. Her. P. 1	Chile . 1827

POZDA, *De Candolle*. In honour of M. Pozo, a Spanish botanist. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. For culture, &c., see *Fragosa*.

coriacea . . . White . 7, F. Her. P. 1 1/2

Chili . 1827

PRÆGNANS, swollen, protuberant.

PRÆMORSE, appearing as if bitten off.

PRÁNGOS, *De Candolle*. The native name of *P. pabularia*. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. All the species are easy of culture, but they thrive best on dry light land, on which the seeds should be sown in autumn.

feniculácea . Yellow . 6, H. Her. P. 1½ Caucas. 1837
pabularia . Yellow . 6, H. Her. P. 1½ Thibet. 1839
uloptera . . Yellow . 6, H. Her. P. 1½ Persia. 1836

PRASINATE, of a green colour.

PRÁSIUM, *Linn.* The Greek name for Horehound. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Plants of little beauty, and of the simplest culture.

május . . White . 7, F. Ev. S. 2 Spain . . 1699
minus . . White . 7, F. Ev. S. 1½ Sicily . . 1751

PRASOPHYLLUM, *R. Brown*. From *prason*, a leek, and *phyllon*, a leaf; similarity in the leaves. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus are not possessed of much beauty. A mixture of loam, peat, and sand, in equal quantities, suits them best; they are increased by divisions of the roots. They must be sparingly watered.

PRIEST'S-TREE. See *Ficus indica*.

PRIMROSE, EVENING. See *Enothëra*.

PRIMROSE. See *Primula*.

PRÍMULA, *Linn.* From *primus*, the first; in allusion to the early flowering of the plants.

Linn. 5, Or. 1, Nat. Or. *Primulacææ*. This is an extensive genus of small, but very pretty and desirable plants. All the species of *Primrose* succeed best in a mixture of loam and peat; and increase readily by seeds, or by dividing the plants, which should be done as soon as they have flowered. *Synonymes*: 1, *P. grandiflora*; 2, *P. intermedia*; 3, *P. norvegica*; 4, *P. calycina*; 5, *P. crenata*; 6, *P. nivâlis*; 7, *P. sinensis*; 8, *P. villosa*; 9, *P. rotundifolia*; 10, *P. villosa flore-albo*; 11, *P. Hornemanniana*; 12, *P. Columnæ*; 13, *P. acutis*.

PRIMULACEÆ, or PRIMWORTS. A group of annual and perennial herbaceous plants, of which the primrose, cowslip, and *Lysimachia* may be taken as examples of the character of the order.

PRINCEPS, chief, principal.

PRINCES'-FEATHER. See *Amaranthus hypochondriacus*.

PRINOS, Linn. *Prinos* is the Greek name of the Holly, which the present genus much resembles. *Linn.* 6, Or. 1, Nat. Or. *Aquifoliacææ*. Ornamental plants. The stove species will grow in loam and peat; and ripened cuttings root in sand, under a glass, in heat. The hardy kinds are well adapted for shrubberies; they will grow in any soil, but thrive best in peat, and are easily increased by layers, or by seeds, which do not vegetate till the second year. *Synonymes*: 1, *Ilex prinoides*; 2, *I. canadensis*.

PRINTZIA, De Candolle. See *Lcyssera polifolia*.

PRINUS. See *Quercus Prinus*.

PRIONITIS. See *Baridria Prionitis*.

PRISMATIC, formed like a prism.

PRISMATOCARPUS, L'Héritier. From *prisma*, a prism, and *karpus*, a fruit; long prismatic form of the fruit. *Linn.* 5, Or. 1, Nat. Or. *Campanulacææ*. These plants grow well in sand, loam, and peat; and cuttings of the young wood, planted in the same kind of soil, under a glass, will root freely: they are also easily increased by seeds. The species are showy when in flower. *Synonymes*: 1, *Trachelium diffusum*; 2, *Campanula frutescens*; 3, *C. interræpta*; 4, *C. Prismatocarpus*. See *Specularia*.

diffusus	Blue	8, G. Ev. S.	1 C. G. H.	1787

interræptus	Blue	6, G. Her. P.	1 C. G. H.	1818
nitidus	White	6, G. Her. P.	2 C. G. H.	1787

PRIVA, Adanson. Derivation unknown. *Linn.*

14, Or. 2, Nat. Or. *Verbenaceæ*. A genus composed of small verbenal-looking plants, with insignificant flowers; loam and peat suits them well, and cuttings root readily under a glass. *Synonymes*: 1, *P. echinata*; 2, *P. hispida*, *Verbena mexicana*. See *Streptium*.

lappulæa 1 . Blue . 7, S. Her. P. 1½ W. Ind. 1817
mexicana 2 . Violet . 8, S. Her. P. 1½ Mexico. 1726

PRIVET. See *Ligustrum*.

PROCESSES, protrusions either natural or monstrous.

PROCKIA, *Linn.* A name of unknown meaning. *Linn.* 13, Or. 1, Nat. Or. *Bixaceæ*. Ornamental shrubs, thriving in a mixture of loam, sand, and peat; cuttings root freely if planted in sand, under a glass, in heat. *Synonyme*: 1, *Ludia heterophylla*.

crucis . . Yellow . 7, S. Ev. S. 4 W. Indies . 1822
serrata . . Yellow . 7, S. Ev. S. 5 Montserrat. 1823
thaeiformis 1 Yellow . 7, S. Ev. S. 6 Bourbon . 1820

PROCRIS, *Commerson*. Procris was the wife of Cephalus. *Linn.* 21, Or. 4, Nat. Or. *Urticaceæ*. Herbaceous plants, of no interest, growing in any common soil, and increased by divisions—*integrifolia*, *punctata*.

PROPHYYS. See *Eurycles*.

PROLIFEROUS, when a plant produces young plants about its root in abundance, or when the inflorescence bears shoots instead of flowers, contrary to the usual course of things.

PROMENEA, *Lindley*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. For culture, see *Maxillaria*. *Synonymes*: 1, *Maxillaria citrina*; 2, *M. graminea*; 3, *M. lentiginosa*; 4, *M. Rollissonii*; 5, *M. stapelioides*; 6, *M. xanthina*.

PROSTANTHERA, *Labillardiere*. From *prostheke*, appendage, and *anthera*, an anther. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Pretty greenhouse plants, requiring a sandy peat soil, and the pots carefully drained, as the plants are apt to damp off; they may be increased by cuttings of the young shoots, in sand, under a glass.

PROSTHEMIUM, *Kunze*. Derived from *prosthemæ*, an addition. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. A very minute black fungus, found in autumn on the trunks of trees—*betulinum*.

PROTEA, *Linn.* From Proteus, a self-transforming sea-god; in allusion to the diversity of appearance of the species. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. This is an extensive genus of magnificent evergreen shrubs, generally considered difficult of culture; but this supposed difficulty may be removed by attending strictly to the watering of the plants. The soil best suited for them is light turfy loam, mixed with about a third part fine sand; the pots must be well drained, and it is advisable to mix some small pieces of broken free-stone with the soil, in potting, to prevent them from retaining too much moisture; the roots are also fond of running among the free-stone or broken potsherds. Care must also be taken not to let them droop for want of water, as the young roots are of a fleshy substance, and are as liable to suffer from too much drought as they are from too much water, whence the necessity of the waterings being regular and moderate. Ripened cuttings will root when taken off at a joint, planted thinly in sand, and placed under a glass, but not in heat; the glass should occasionally be removed to allow them to dry, as they are liable to damp off. Water them, but not over the leaves, whenever they want it, and let them get a little dry before the glass is placed over them again. *Synonymes*: 1, *P. longifolia*; 2, *P. speciosa*. See *Isopogon*, *Leucadendron*, *Leucospermum*, *Mimætes*, *Nivèdia*, *Petrôphila*, and *Serruria*.

PROTEACEÆ, or PROTEADS. Handsome evergreen shrubs, deserving extensive cultivation. Some of the species of *Protea* and *Leucadendron* have their leaves clothed with a silky pubescence, which renders them particularly ornamental. They all require care in cultivation, or the fine foliage will perish.

PROTOCOCCUS, Agardh. From *protos*, first, and *kokkos*, a berry. *Linn.* 24, Or. 7, Nat. Or. *Conferveæ*. This species is found on rocks during summer—*nivalis*.

PROTONEMA, Agardh. From *protos*, first, and *nema*, a filament; in allusion to the simplicity of structure. *Linn.* 24, Or. 7, Nat. Or. *Conferveæ*. Singular species of *Algae*, found in caverns, on the earth, hotbeds, &c.—*cryptarum, fragrans, muscicola, Orthotrichi, repens, umbrinum, velutinum*.

PRUINOSA, covered with glittering particles, as if fine dew had been congealed upon it.

PRUNASTER. See *Evernina Prunastri*.

PRUNELLA, Linn. Altered from *Brunella*, derived from the German *die Braune*, a disorder in the jaws and throat, which this plant was supposed to cure. *Linn.* 14, Or. 1, Nat.

Or. *Lamiææ*. The species of this genus grow freely in a light rich soil, and are well adapted for ornamenting rock-work, or the front of flower-borders; they are readily increased by divisions. *Synonymes*: 1, *P. australis*; 2, *P. pennsylvanica*; 3, *P. hirta*; 4, *P. alba*, *P. laciniata*; 5, *P. incisa*; *P. longifolia*.

PRURIENT, causing an itching sensation.

PRUSSIC ACID is found in large quantities in the peach.

PSACALUM, Cass. See *Cacalia Pellata*.

PSAMMA, Romer and Schultes. From *psammos*, sand; its place of growth. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. A grass with a strong perennial creeping root; on some parts of the coast it is planted to keep the sand from being removed by the wind and tides; it is also used for mats and thatch. *Synonyme*: 1, *Arundo arenaria*.

arenaria 1 . Apetal . 6, H. Grass 2 Brit., sea coast.

PSIADIA, Jacquin. From *psias*, a dew-drop; in allusion to the glutinous exudation on the leaves. *Linn.* 19, Or. 5, Nat. Or. *Asteraceæ*. A species of little beauty, growing in any light rich soil; cuttings will root freely under a glass. *Synonyme*: 1, *Conjiza glutinosa*.
glutinosa 1. Yellow . 6, S. Ev. S. 2 Mauritius 1796

PSIDIUM, *Linn.* Derived from *psidion*, the Greek name of Pomegranate. *Linn.* 12, Or. 1, Nat. Or. *Myrtáceæ*. The species of *Guava* grow well in a mixture of loam and peat, and cuttings will root in sand, under a glass; they will also root from layers. Some of the species fruit well in our stoves, but are not considered of much value. *P. Cattleyanum* has a fruit of a fine claret colour, and bears some resemblance in consistence and flavour to the strawberry. *Synonymes*: 1, *P. grandiflorum*; 2, *P. chinense*; 3, *P. guianense*; 4, *P. sapidissimum*. See *Nélitris*.

PSILONEMA, Meyer. From *psilos*, naked, and *nema*, a filament. *Linn.* 15, Nat. Or. *Brassi-*

cacææ. For culture, &c., see *Algssum*. *Synonyme*: *Algssum dasycaëpum*.

dasycaëpum . Yellow . 6, H. A. 1 Siberia . 1827

PSILONIA, Fries. From *psilos*, a spot. *Linn.* 24, Or. 9, Nat. Or. *Botrytáceæ*. A reddish-coloured species, found in masses on the surface of felled oaks—*gilva*.

PSILOTUM, Swartz. From *psilos*, naked; destitute of leaves. *Linn.* 24, Or. 3, Nat. Or. *Lycopodiáceæ*. A small bushy plant, of little beauty. It is of the simplest culture, but not worth growing except as an object of curiosity. *Synonyme*: 1, *Bernhardia dichotoma*.
triquetrum 1. Brown . 7, S. Her. P. 2 W. Ind. 1793

PSILURUS. See *Monérma*.

PSOPHOCÁRPUS, Necker. From *psophos*, a sound, and *karpos*, a fruit; the seeds, when ripe, make a rattling noise in the pods if shaken. *Linn.* 17, Or. 4, Nat. Or. *Fabáceæ*. In the Mauritius they use the seed of this plant in the same way as we do peas. For culture, &c., see *Lablavia*. *Synonyme*: 1, *Dolichos tetragonolobus*.

tetragonolobus 1 Blue . 10, S. Tw. A. 4 Maurit. 1816

PSORALEA, *Linn.* From *psoraleos*, scurfy; in allusion to the appearance of the calyx, and most parts of the plants. *Linn.* 17, Or. 4, Nat. Or. *Fabáceæ*. All the species are rather handsome when in flower. The stove and greenhouse kinds are best cultivated in loam and peat, and cuttings root freely in sand, under a glass. The frame and hardy sorts do best in peat and sand, or any light sandy soil, and are increased by cuttings or seeds. The biennial species must be raised on a hotbed frame, and when potted off, kept with the greenhouse plants. The seeds of *P. corylifolia* are used by native doctors in India, and considered stomachic and deobstruent. *Synonymes*: 1, *P. linearis*; 2, *P. americana*; 3, *P. pedunculata*; 4, *P. intermedia*. See *Cyanopsis*, *Dalea* and *Orobus*.

PSYCHINE, *Desfontaines*. From *psyche*, a butterfly; the pods are furnished with wings like a butterfly. *Linn.* 15, Nat. Or. *Brassicæ*. A worthless annual, merely requiring to be sown in the open ground. *Synonyme*: 1, *Thlâspi Psychine*—*stylosa* 1.

PSYCHOTRIA, *Linn.* Said to be from *psyche*, life; in allusion to the powerful medical qualities of some of the species. *Linn.* 5, Or. 1, Nat. Or. *Cinchonæ*. Most of the species are handsome in foliage, but the flowers of all are rather insignificant. They are of the easiest cultivation, growing best in a mixture of loam, peat, and sand; and cuttings strike root readily in sand, under a glass. Several species are used as substitutes for *Ipecacuanha*. See *Geophila*, *Nonatelia*, and *Palcouiria*.

PSYLLIUM. See *Plantago Psyllium*.

PTARMICA, *De Candolle*. See *Achillea Ptarmica*.

PTOLEA, *Linn.* From *ptelea*, the Greek name of the elm, derived from *ptao*, to fly; alluding to the winged fruit. *Linn.* 4, Or. 1, Nat. Or. *Xanthoxylaceæ*. A hardy North American plant, with laburnum-like leaves; it will thrive in any common border soil, and increases readily by layers. See *Ptelidium*.

trifoliata . Green . 6, H. De. S. 10 N. Amer. . 1704

PTELIDIUM. So named by *Thouars*, from its similarity to *Ptelea*. *Linn.* 4, Or. 1, Nat. Or. *Celastraceæ*. An ornamental shrub, growing best in a mixture of loam, peat, and sand; and cuttings of the ripened wood root readily in sand, under a glass, in heat. *Synonyme*: 1, *Ptelea ovata*, *Seringia ovata*.

ovatum 1 . Green . 6, S. Ev. S. 3 Madagascar . 1813

PTERYX, *Linn.* From *pteryx*, a wing; in allusion to the appearance of the leaves. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. An orna-

mental genus of *Fernis*. The stove and greenhouse kinds are best cultivated in a mixture of sandy loam and peat. The hardy kinds grow best among rock-work, or in a shady border; a light sandy soil suits them, and they are all readily increased by divisions, or seeds. *P. aquilina* is the well-known brake of this country, which has been sometimes used as an anthelmintic. *P. esculenta* is occasionally used as an article of food in different countries. *Synonyms*: 1, *P. semiserrata*, *serriaria*, *pentaphylla*, *heterophylla*, *nervosa*, *vilata*, *digitata*, *multiaurita*, *triphylla*, *stenophylla*, *albo-lineata*; 2, *P. elegans*; 3, *Adiantum hexagonum*, *Ruta-muraria major*; 4, *P. argyrea*, *tricolor*. See *Allosorus*, *Cheilanthes*, *Lonchites*, *Nothochlæna*, and *Tenitis*.

PTEROCARPUS, *Linn.* From *pteron*, a wing, and *karpus*, a fruit; the pods are girded with a broad wing. *Linn.* 16, Or. 7, Nat. Or. *Fabaceæ*.

Mostly fine ornamental trees, attaining the height of from forty to sixty feet, and growing best in a loamy soil. Cuttings of the young wood not deprived of any of their leaves, will root in sand, under a glass, in heat. The wood of the tree is dark red with black veins, capable of a good polish, and so heavy as to sink in water. *P. santalinus* yields the official Red Sanders-wood. *Synonymes*: 1, *P. glabra*, Brjā *Ēbenus*.

PTEROCYLADUS. See *Baccharis*.

PTERODISCUS, Hooker. From *pteron*, a wing, and *discus*, a disk. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. For cultivation, see *Calceolaria*.

speciosus . Lil. pur. . 5, G. Her. P. 2 Africa . 1844

PTEROGONIUM, Swartz. From *pteron*, a wing, and *gonos*, a shoot; referring to the pinnated stems. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. These plants are found on trees and sub-alpine rocks. *Synonymie*: 1, *P. caespitosum*—filiforme 1, gracile, Smithii. See *Léskeæ*.

PTERONEURON, De Candolle. From *pteron*, a wing, and *neuron*, a nerve; because of the winged placentae. *Linn.* 15, Nat. Or. *Brassicaceæ*. Rock plants, requiring a light soil, and increased by seeds, which may be sown where the plants are intended to remain. *Synonymes*: 1, *Cardamine carnosa*; 2, *C. græcum*.

carnosum 1 . Pale . 6, H. Her. P. ¼ Hungary. 1824
græcum 2 . . White. 6, H. A. ¼ S. Eur. . 1710

PTERONIA, Linn. From *pteron*, a wing; the feathery scales of the receptacle. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. A genus of interesting plants, growing well in loam and peat,

and readily increased by cuttings. See *Stachylinæ*.

PTEROTHÈCA, De Candolle. From *pteron*, a wing, and *theca*, a spore-case. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Sow the seeds in any common garden soil.

nemausensis . Yellow 6, H. A. 1 S. Eur. . 1794
 H H 2

PTERYGODIUM, Swartz. The name is probably derived from *pterygodes*, wing-like; because of the appearance of the sepals. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus of tuberous-rooted plants, requiring the same treatment as *Corygium*.

alatum . . . Yellow . . . 7, G. Ter. 1 C. G. H. . 1821
volucre . . . Yellow . . . 7, G. Ter. 1 C. G. H. . 1797

PTILOCNEMA, D. Don. See *Pholidota*.

PTILOSTEPHIUM, Kunth. From *ptilon*, a feather, and *stephos*, a crown; from the feathery-like pappus. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. The seed of these plants should be sown on a gentle hotbed, and the young plants transplanted into the open border.

coronopifolium Yellow 6, H. A. 1 Mexico . 1823
trifidum . . . Yellow 6, H. A. 1 Mexico . 1823

PTILOTA, Agardh. From *ptilotos*, pinnated; the form of the frond. *Linn.* 24, Or. 7, Nat. Or. *Ceramidaceæ*. This species and its variety are found in the ocean—*plumosa*, *p. tenuisima*.

PTILOTRICHUM. Synonymes: 1, *Algyssum canescens*; 2, *A. elongatum*.

canescens 1 . . . White . . . 4, H. De. S. 3 Siberia . 1828
elongatum 2 . . . White . . . 4, H. De. S. 1 Altaia . 1836

PTYCHOTIS, Koch. From *ptyche*, a plait, and *ous*, an ear; the petals have a plait emitting a segment resembling a little ear. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Annuals not worth cultivating. Synonymes: 1, *Seseli ammoides*; 2, *Trachyspermum copticum*; 3, *S. corsicum*; 4, *S. sacifragum*, *Cærum Buniis*, *Mæum heterophyllum*; 5, *S. verticillatum*, *pusillum*—*P. ammoides* 1, *coptica* 2, *corsica* 3, *heterophylla* 4, *verticillata* 5.

PUBERULA, rather downy.

PUBESCENT, downy, hoary, covered with short soft hairs.

PUCINIA, Persoon. In honour of T. Puccinius, a professor of anatomy at Florence. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. The species of this genus have all the appearance of blackish or brown smut; and are found, as most of the specific names imply, upon the leaves of various plants—*Adoxæ*, *Egopodii*, *Anemones*, *Asparagi*, *Aviculariæ*, *Betoniceæ*, *Bæci*, *Calthæ*, *Campânulæ*, *caricina*, *Centauriæ*, *Chrysosplenii*, *Circeæ*, *clandestina*, *Epilobii*, *Galidum*, *Glechomatis*, *globosa*, *glomerata*, *Graminis*, *Heraclei*, *Lychnidearum*, *Menthæ*, *Polygoni*, *Primulæ*, *Prunorum*, *pulverulenta*, *Saniculæ*, *Scorodoniæ*, *Syngenesiarum*, *tumida*, *Ulmariæ*, *Umbelliferarum*, *Valantiæ*, *variabilis*, *Veronicarum*, *Vincæ*, *Violæ*.

PUCOON. See *Sanguinaria*.

PUCHA-PAT, or **PACHOULI**. See *Plectranthus*.

PUDICA, modest, humble.

PUERARIA, De Candolle. In honour of M. M. N. Puerari, a professor at Copenhagen. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. Ornamental plants. For culture and propagation, see *Clitidioria*. Synonyme: 1, *Hedysarum tuberosum*.

tuberosa 1 Yellow . . . 6, G. Ev. Cl. 3 E. Ind. . 1806
Wallichii Yellow . . . 6, G. Ev. Cl. 3 Nepal . 1826

PUFF-BALL. See *Lycoperdon*.

PULEGIUM. See *Mentha Pulegium*.

PULICARIA, De Candolle. See *Insula*.

PULMONARIA, Linn. So named from its supposed medical properties in diseases of the lungs. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceæ*. Very pretty flowering plants, well adapted for ornamenting the front of shrubberies. They thrive in any common soil, and are readily increased by divisions. Synonymes: 1, *P. oblongata*. See *Mertensia*.

PULVERULENT, powdery, downy.

PULVINATE, convex and flattened, cushion-shaped.

PÜMOS. See *Corypha Pamos*.

PUMPKIN. See *Cucurbita Pepo*.

PUNCTARIA, Griseb. From *punctum*, a dot; numerous dotted fructifications. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. These plants are generally found on marine rocks—*latifolia*, *plantaginæa*, *tenuissima*.

PUNCTATE, dotted.

PUNGENATE, pricking or stinging.

PUNICA, *Linn.* From *punicus*, of "Carthage," near which city it is said to have been first found; or from *punicus*, scarlet: alluding to the colour of the flowers. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. There is no tree more showy than the Pomegranate. *P. granatum* and its varieties produce their splendid flowers and fruit very plentifully when planted against a south wall. They all grow well in a light rich loam, and strike root freely from cuttings or layers; the rarer varieties are sometimes increased by grafting on the common kinds. *Synonymes*: 1, *P. G. album*; 2, *P. G. plenum*.

PUNICEUS, red, or scarlet.

PUPALIA. See *Desmochæta*.

PURGING-NUTS. See *Jatropha purgans*.

PURGÖSEA. See *Crassula*.

PURPLE OF AMORGUS is obtained from *Rocella tinctoria*.

PURPLE-HEART TREE. See *Copaifera pubiflora* and *bracteata*.

PURSÆTHA. See *Entada Pursætha*.

PÜRSHIA, Dr. Candolle. In honour of Frederick Pursh, author of "Flora Americæ Septentrionalis," 1817. *Linn.* 12, Or. 1, Nat. Or. *Rosaceæ*. A dwarf shrub, requiring to be grown in a dry, light, sandy soil. It may be propagated by cuttings, but is easier increased by seeds. *Synonyme*: 1, *Tigarea tridentata*. See *Onosmodium*.

tridentata 1 .Yel. .6, H. Ev. S. 2 N. Amer. 1826

PURSLANE. See *Portulacæa*.

PURSLANE-TREE. See *Portulacaria*.

PUSCHKINIA, Adams. Named in honour of Count M. Puschkin, a Russian botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. This plant requires to be cultivated in sandy loam, and is increased by offsets. *Synonyme*: 1, *Adamsia scilloides*.

scilloides 1 .Pa. blue 5, F. Bl. P. ¼ Siberia .1819

PUSILLOUS, weak, diminutive.

PŪSTULATE, covered with glandular excrecences.

PŪTORIA, De Candolle. See *Ernődea montana*.

PŪTRANJIVA, Wallich. See *Nagica Putranjiva*.

PŪTTY-ROOT. See *Aplëctrum hyemalë*.

PŪYA, Molina. This name is substituted for the genus *Pourrëtia*, as being the most ancient. *Paya carulea* is identical with *Pourrëtia carulea*. *P. heterophylla* is a very pretty and curious plant, bearing two distinct kinds of leaves, one with tough, broad, horny petioles, which overlie each other, forming a kind of bulb, extended into narrow, serrated processes, about two inches long; the others which are last formed, are thin, bright green and lanceolate, more than eighteen inches long. For culture, &c., see *Tillandsia*. *Synonymes*: 1, *Pilearnia undulatifolia*; 2, *Pourrëtia carulea*; 3, *Pourrëtia lanuginosa*.

PYCNANTHEMUM, Michaux. From *pyknos*, dense, and *anthesis*, a flower; the flowers are produced in dense whorls. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. White-flowering plants of little beauty, but fragrant in a high degree. A peat border suits them best, and they are readily increased by divisions. *Synonymes*: 1, *P. verticillatum*; 2, *Thymus virginicus*; 3, *Monardella caroliniana*.

PYGMÆA, dwarf.

PYN-BOOM. See *Pinus*.

PYRACANTHA. See *Cratægus Pyracantha*.

PYRAMIDAL, formed like a pyramid.

PYRÆSTER. See *Pyrus communis* *Pyræster*.

PYRÉNIA, Fries. From *pyren*, a kernel; appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Botrytiaceæ*. This species is found on dead wood—*lymatile*.

PYRÉNULA, Acharius. From a diminutive of *pyren*, a kernel; the receptacle is enclosed in the thalamium as a kernel in its shell. *Linn.* 24, Or. 8, Nat. Or. *Graphidaceæ*. These plants

are to be met with on rocks, and the bark of beech-trees, at all seasons of the year—*virgescens*, *nitida*, *tessellata*, *umbonata*.

PYRÆTHRUM, *Smith*. From *pyr*, fire; the roots are hot to the taste. *Linn*. 19, Or. 2, Nat. Or. *Asteriaceæ*. A genus of very interesting plants. The greenhouse kinds grow in any rich light soil, and young cuttings root readily when planted under a glass. The hardy kinds are increased by divisions or seeds; any common soil suits them. *Synonymes*: 1, *Chrysanthemum coccineum*; 2, *P. grandiflorum*; 3, *P. grandiflorum*; 4, *Achillea sambucifolia*. See *Anthemis*.

PYROLÆÆ, or **WINTERGREENS**, are a small group of herbaceous plants, possessing some beauty, and found in a wild state in woods in various parts of the world.

PYROLÆION, *Herbert*. Literally *Firelily*; from the colour of the flowers. *Linn*. 6, Or. 1, Nat. Or. *Amarylloidææ*. Rather a pretty genus, growing in sandy loam, and increased by offsets. *Synonyme*: 1, *Amarylhis peruviana*. See *Chimaphila*.

<i>alacum</i>	Gold clrd.	5, G. Bl. P.	1	Peru	1833
<i>flavum</i>	Yellow	7, G. Bl. P.	1	Peru	1850

PYRULÆRIA, *Michaux*. The meaning is not known to us. *Linn*. 23, Or. 2, Nat. Or. *Santalacææ*. An ornamental shrub, growing in sandy loam, and increased by cuttings. *Synonyme*: 1, *Hamilldonia oleifera*.

pibera . . . Grn. yel. . . 6, F. De. S. 6 N. Amer. 1800

PÝRUS, *Linn*. From *peren*, the Celtic word for pear. *Linn*. 12, Or. 2, Nat. Or. *Pomacææ*. To this genus belong the Pear and Apple, as well as the Service-tree, and many others, either prized for their fruit or their ornamental appearance. In our shrubberies, they grow in any common soil; but for the more highly cultivated ones a deep loam is necessary. They are increased by seeds, and the established kinds are multiplied by grafting the choicer on the common kinds. *Synonymes*: 1, *P. málus sylvestris*; 2, *P. salicifolia*; 3, *P. alpina*; 4, *P. sylvestris*; 5, *P. orientalis*; 6, *P. púbens*; 7, *P. edulis*; 8, *Sorbus latifolius*; 9, *Sorbus microcarpa*; 10, *S. hýbrida*; 11, *P. PYTHAGOREAN BEAN. See *Nelambium speciosum*.

PYTHON, Mart. See *Arum campanulatum*.

PYTHONIUM, Schott. From *python*, a serpent, on account of the form of the spathe. *Linn.* 21, Or. 7, Nat. Or. *Araceæ*. A genus of plants closely allied to *Caladium*, and requiring the same treatment. *Synonymes*: 1, *Caladium petiolatum*; 2, *Thomsonia nepalensis*. See *Amorphophallus* and *Thomsonia*.

Hookeri 1 . Gn. pur. 6, S. Tu. P. 2 N. Guinea 1840

Wallichianum 2 White . 6, S. Tu. P. 2 Nepal . 1816

PYXIDANTHERA, Michaux. From *pyxis*, a box, and *anthera*, an anther. *Linn.* 5, Or. 1, Nat. Or. *Diapensiaceæ*. This species thrives in peat soil, treated as other frame plants, and it may be increased by cuttings or divisions. *Synonymic*: 1, *Diapensia cuneifolia*.

barbulata 1 . White . 7, F. Ev. Tr. 4 Carolina 1806

PYXIDARIA. See *Lindernia Pyxidaria*.

PYXIDATA, box-shaped.

Q.

QUADRANGULAR, four-angled.

QUADRATE, square.

QUADRIA, Ruiz and Pavon. In honour of Antonio de la Quadra, a Spanish cultivator. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. This tree requires to be grown in peat and loam, and propagated by cuttings in sand, under a glass. *Synonymic*: 1, *Guevina Avellana*. heterophylla 1 Yel. grn. 6, G. Ev. T. 40 Chile . 1826

QUADRIFARIOUS, arranged in four rows.

QUADRIFID, divided into four parts.

QUAHOUH. See *Coffea arabica*.

QUAKING-GRASS. See *Briza*.

QUALEA, Aublet. The name of the tree among the Guianese Indians. *Linn.* 1, Or. 1, Nat. Or. *Vochysiaceæ*. This tree will grow best in peat and loam, and is readily increased by seeds.

violacea . . Violet . S. Ev. T. 80 Brazil . 1824

QUAMASH. See *Scilla esculenta*.

QUAMOCLET, Tournefort. From *kyamos*, a kidney-bean, and *klitos*, dwarf; the species of this genus resemble the kidney-bean in their climbing stems, but are less tall. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceæ*. This genus, for the most part, consists of very beautiful half-

hardy annuals. They require to be reared on a hotbed, and about the end of May they may be planted out in a warm sheltered situation in the open border; some of them may be kept in the greenhouse, where they will flower and ripen their seeds freely. The perennial kinds are well adapted for covering pillars in the stove or greenhouse. Any light rich soil suits them, and cuttings of the young wood root readily in sand, under a glass, in heat. *Synonymes*: 1, *Ipomœa coccinea*; 2, *I. digitata*; 3, *I. hastigera*; 4, *I. hederifolia*; 5, *I. longiflora*; 6, *I. luteola*; 7, *I. phœnicea*; 8, *I. sanguinea*; 9, *I. trilobata*; 10, *I. quamoclit*; 11, *Calbœa globosa*.

QUARTZ, a kind of crystal-like stone.

QUASSIA, *Linn.* Quassi, the name of a negro slave, who first used the bark as a febrifuge. *Linn.* 10, Or. 1, Nat. Or. *Simarubaceæ*. This valuable tree thrives in loam and peat; and cuttings of the ripened wood, with their leaves left whole, will root in sand, under a glass, in heat. The wood of this tree is well known as one of the most intense bitters, and is considered an effectual remedy in any disorder where pure bitters are required. See *Simaruba*.

amara . . Red . . 6, S. Ev. T. 20 Guiana . 1790

QUATERNARY, arranged in fours.

QUEKETTIA, *Lindley*. Named after the late E. J. Quekett, F. L. S., an excellent botanical observer, and one of our best vegetable anatomists. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Dr. Lindley says, "although this little plant is only a few inches high, and has no attractions for the vulgar eye, it is in some respects one of the most interesting I know, if examined microscopically." It will be found to succeed best on wood, treated precisely as the species of *Pleurothallis*.

microscópica . Yellow . 4, S. Epi. † Brazil .

QUELTIA. See *Narcissus*.

QUERCITRON. See *Quercus tinctoria*.

QUERCUS, *Linn.* From the Celtic *quer*, fine, and *cuez*, a tree, fine tree; others derive it from the Greek word *choiros*, a pig; because those animals feed on the acorns. *Linn.* 21, Or. 9, Nat. Or. *Corylaceæ*. All the species of this very important genus have a highly ornamental appearance, either on the lawn or in the forest; the wood is also much superior to that of any other tree, teak alone excepted, for the purpose of naval architecture; indeed, there is no purpose in the arts to which the wood of the oak is not applicable. *Q. Suber* is very valuable on account of its being the only tree which produces in any quantity that very important article, cork. The bark, leaves, and fruit, of all the species abound in astringent matter, and in tannin. The oak succeeds best in a deep loamy soil, and in a somewhat low situation. The species are generally increased from seed; and it is only when particular varieties are to be perpetuated, that grafting is resorted to. The seeds may either be sown when they drop from the tree, or they may be thoroughly dried, and preserved till the following March; previous to sowing, the soil should be well prepared, and after the drills are opened, or the earth drawn off the beds, the acorns may be scattered along the drills or over the beds, keeping them about two inches apart; before covering, the acorns must, if sown in beds, be patted down with the back of a spade, or the back of a wooden-headed rake if sown in drills. They should be covered from half an inch, to an inch and a half deep, according to the size of the acorn, with finely broken soil. The after culture of the oak does not require any notice here. *Synonymes*: 1, *Q. Phyllata*; 2, *Q. conglomerata*;

3, *Q. hemisphærica*; 4, *Q. nana*; 5, *Q. austriaca*; 6, *Q. Lucombeana crispata*; 7, *Q. L. dentata*; 8, *Q. cerris dentata*; 9, *Q. L. heterophylla*; 10, *Q. QUERIA, *Læfling*. In honour of Don J. Query Martinez, M.D., a professor of botany at Madrid. *Linn.* 3, Or. 3, Nat. Or. *Caryophyllaceæ*. The seed of this plant only requires sowing in the open border. See *Angebia*.

hispanica . . Apetal . 6, H. A 1½ Spain . . 1810

QUERNALES. Plants that agree in certain general characters with the oak (*Quercus*).

QUICK-GRASS, or QUITCH. See *Triticum repens*.

QUICK-HEDGES are formed of young plants of Hawthorn (*Crataegus oxyacantha*).

QUICK-MOSSES, or QUIVER-WORTS. See *Confer-vaceæ*.

QUILLAJA, *Don*. Quillai or Cullay is the name of *Q. saponaria*. *Linn.* 10, Or. 4, Nat. Or. *Rosaceæ*. For culture, see *Kagenéckia*. *Synonymes*: 1, *Q. molinae*, *Smegmaria emarginata*.

saponaria 1 . White . 4, H. Ev. S. 2 Chili . 1832

QUILLWORT. See *Isodetes*.

QUINCE. See *Cydonia*.

QUINDA. See *Chenopodium Quinda*.

QUINQUA, or QUININE. An alkaloid obtained from several species of *Cinchona*.

QUISQUALIS, *Linn.* From *quis*, who, and *qualis*, what kind; when the genus was named, it was uncertain to what class or order it belonged.

Linn. 10, Or. 1, Nat. Or. *Combretaceæ*. The species of this genus are all very great favourites with cultivators, on account of the brilliancy of their flowers. For culture and propagation, see *Polvrea*. *Synonyme*: 1, *Q. sinensis*.

QUIVER-WORTS, or QUICK-MOSSES. See *Confer-vaceæ*.

QUIVÍSIA, *Commerson*. From *Bois de quivi*, the name of one of the unintroduced species in the Isle of France. *Linn.* 10, Or. 1, Nat. Or. *Meliaceæ*. This shrub succeeds well in a mixture of peat and loam; and ripened cuttings root freely in sand, under a glass, in heat.

heterophylla . White . 7, S. Ev. S. 12 I. France 1822

R.

RACEME, a term commonly applied to flowers, when they are arranged round a filiform simple axis, each particular flower being stalked.

RACEMOSE, flowering in racemes.

RACEMOSELY-CORYMBOSE, flowers disposed in a manner between a corymb and a raceme, or numerous racemes forming a corymb.

RACHIS, that part of a culm which runs up through the ear of corn, and consequently

that part which bears the flowers in other plants; also the common petiole of a pinnate leaf.

RACÓDIUM, *Link.* From *rakos*, a torn garment; in allusion to the appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. This species is found in undisturbed wine-cellars. *Synonyme*: 1, *Fibrillaria vinaria*—cellare 1.

RACÓDIUM. See *Sphæria Racodium*.

a flower is said to be so when, in a cluster or head of florets, those of the circumference or ray are long and spreading, and unlike those of the disk. A stigma is said to be rayed or radiant when its divisions resemble the rays of a star.

RADICAL, belonging to, or proceeding from, the root.

RADICANT, rooting, producing roots from the stem.

RADICLE, the root of an embryo.

RADIOLA, *Gmelin*. From *radiolus*, a little ray; in allusion to the capsule being rayed. *Linn.* 4, Or. 3, Nat. Or. *Lindacææ*. A little white-flowering, insignificant plant, found in sandy places. *millegiana*. White. 7, H. A. $\frac{1}{10}$ Brit., sandy pl.

RADISH. See *Raphanus*.

RADIUS, the ray of a compound flower.

RAFFLESIA ARNÓLDI, called in Sumatra Ambun-Ambun, and Krúbút, is a parasitic flowering fungus, discovered by Sir Stamford Raffles in the interior of Sumatra, but is unknown in this country.

RAFFLESIACEÆ, or **PATMA-WORTS**, consists of a few genera of singular flowering fungi, natives of the East Indies.

RÁFNIA, *Thunberg*. In honour of C. G. Rafn, of Copenhagen, a botanical author. *Linn.* 16, Or. 6, Nat. Or. *Fabacææ*. This is a genus of remarkably pretty plants; they succeed well in peat and loam, and young cuttings root without difficulty in sand, under a glass. *Synonymes*: 1, *Crotalaria opposita*; 2, *Borbonia cordata*. See *Vascòla*.

RAGGED ROBIN. See *Lychnis Flosculi*.

RAG-MOSS-LEATHER. See *Racodium*.

RAGWORT. See *Othonna*.

RAGWORT. See *Senecio Jacobæa*.

RAISINS and **CURRENTS** of the shops are dried grapes.

RAJÂNIA, *Linn.* In honour of John Ray, an eminent English naturalist. *Linn.* 22, Or. 6, Nat. Or. *Dioscoridacææ*. Stove climbers, of no beauty, growing in peat and loam. They may be readily increased by division of the root—*cordata*, *hastata*, *quinquefolia*. See *Akèbia*.

RAMALINA, *Acharius*. From *ramale*, a withered branch; habitat of the plants. *Linn.* 24, Or.

8, Nat. Or. *Parmeliacææ*. Greyish-coloured Lichens, found on rocks and dead branches of trees—*farinacea*, *fastigiata*, *f. calicaris*, *fraxinea*, *pollinaria*, *polymorpha*, *scopulorum*.

RAMBUTAN, or **RAMBOOTAN**. See *Nephelium* (*Euphoria Nephelium*) *loppaceum*.

RAMENTA, little brown withered scales, with which the stems of some plants, especially ferns, are covered.

RAMIFICATIONS, subdivisions of roots or branches.

RAMÓNDIA, *Richard*. In honour of M. L. Ramond, a French botanist and traveller. *Linn.* 5, Or. 1, Nat. Or. *Gesneracææ*. A genus consisting of one very pretty little alpine plant, well adapted for the front of flower-borders, or for growing in pots. Any light soil suits it, and it is readily increased by division of the root. *Synonymes*: 1, *Verbascum Myconi*, *Chaixia Myconi*.

pyrenæica 1. Purple. 5, H. Her. P. $\frac{1}{2}$ Pyrenees 1731

RANUNCULACEÆ, or **CROW-FOOTS**. A large group of plants, of which the common buttercup (*Ranunculus bulbosa*), the Anemone, and the Clematis may be cited as familiar examples. Acridity, causticity, and poison, are the characteristics of the order.

RANÚNCULUS, *Linn.* From *rana*, a frog; many of the species are found in moist places frequented by that reptile. *Linn.* 13, Or. 1, Nat. Or. *Ranunculacææ*. Many of the plants belonging to this extensive genus are well worth the cultivator's care, and they have long been favourites with the florist. The aquatic kinds require to be grown in water. The grumose-rooted species will thrive in any common soil, and in any situation; they are increased

by offsets from the roots, or by seeds. *R. asiaticus* and its varieties should be grown in good fresh loam and well-rotted cow-dung; the tubers should be planted in October or March; if in the former month, they will require to be slightly protected in bad weather. Seeds selected from the best semi-double varieties, sown early in October, and kept growing during the winter, will flower the next season; these latter may also be increased by dividing the roots. These plants are mostly poisonous. *Synonymes*: 1, *R. polyanthemos*; 2, *aureus*, *villosus*; 3, *pyrenæus*; 4, *Thómasi*; 5, *sericeus*; 6, *apiifolius*; 7, *monspeliacus*; 8, *polyanthemos*; 9, *aureus*, *villosus*; 10, *rigidus*, *circinatus*; 11, *peucedanifolius*; 12, *pyrenæus*, *plantagineus*; 13, *aconitifolius*; 14, *muricatus*, *brasilianus*; 15, *Breytiannus*; 16, *Teneriffæ*, *grandiflorus*; 17, *hederæus grandiflorus*; 18, *divaricatus*; 19, *R. olysipponensis*. REEVESIA. Named by Lindley, in compliment to John Reeves, Esq., F.L.S., of Canton, from whom the botany of China has received material assistance, and to whom our gardens are indebted for many of their fairest ornaments. *Linn.* 16, Or. 8, Nat. Or. *Sterculiæcæ*. This very handsome shrub may be referred to the greenhouse species of *Stercalia*, for culture and propagation.

thyrsoidea . . White . 1, G. Ev. S. 4 China . 1826

REFRIGERANT, producing coolness.

REHMÂNIA, *Libosch.* Not explained. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariæcæ*. The flowers of this plant are large, but their colour so much destroys the effect of their magnitude, that the plant is, on that account, more curious than ornamental. Though hardy, it will succeed best in a cool greenhouse or frame, planted in any common soil, and is propagated by cuttings.

chinensis . . Dingy . 4, H. Her. P. 2 China . 1835

REICHARDIA, *Roth.* In honour of John James Reichard, a celebrated botanist and author. *Linn.* 10, Or. 1, Nat. Or. *Fabæcæ*. For the culture and propagation of this ornamental tree, see *Poinciâna*. *Synonyme*: 1, *Cæsalpinia ligulata*.

REMIREA, *Aubl.* Its name in Guiana. *Linn.* 3, Or. 1, Nat. Or. *Cyperæcæ*. A plant of no value; it is increased by seeds or divisions—*maritima*.

REMUSÂTIA, *Schott.* In honour of Abel Remusat, a celebrated linguist. *Linn.* 21, Or. 7, Nat. Or. *Aracæcæ*. See *Caladium*.

RENANTHÈRA, *Loureiro*. From *ren*, a kidney,

and *anthera*, an anther; in allusion to the kidney or reniform shape of the anthers or pollen-masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidæcæ*. *R. coccinea* is a truly splendid plant. The flowers are produced on a lateral loose panicle; the sepals are of a pale scarlet, obscurely and irregularly blotched; the petals are marked with yellow bands on a beautiful scarlet ground; the labellum is yellow and scarlet. The plant will succeed in peat mixed with broken potsherds, carefully placed about the roots, so as to ensure a safe drainage; but the best way of growing it, is to plant it in *sphagnum* or *hypnum* moss, cut short and packed close about the roots, with a quantity of broken potsherds to act as a drainage. Any of the young branches taken off and potted in moss will soon make plants, which succeed well in any place where a strong heat and an abundance of moisture is kept up; when the plant has attained a good size, about the height of six feet, it should be placed in a house where the heat is from 65 to 70 degrees, and kept perfectly free from moisture, except what arises from watering and occasional syringing. The whole of the plant should be as near the glass and as much exposed to the sun as possible; and to prevent the leaves from shrivelling too much, it may be occasionally syringed in the afternoon. After being in this house two or three months, the flower-spikes will make their appearance; when the flowers are expanded, the plant should be removed to a cool house, and placed in a light situation: it will there continue in perfection for a great length of time. *Synonymes*: 1, *Aërides arachnites*; 2, *R. moluccana*, *A. matutina*.

RESEDÂCEÆ, or WELD-WORTS. These are nearly

all weeds, inhabiting various parts of Europe and Asia. The Mignonette (*Reseda odorata*) is a familiar example of their habits.

RESEDA, *Linn.* From *resedo*, to calm or appease; the Latins considered its application useful in external bruises. *Linn.* 11, Or. 3, Nat. Or. *Resedaceæ*. The Mignonette is an old and universal favourite, on account of the very pleasant odour emitted by the flowers. In summer it merely requires the treatment of other hardy annuals; but to obtain flowering plants through the winter and spring months, two other sowings must be made; to obtain flowering plants from December to March, the seeds should be sown about the middle of July upon a light, rich, open border, and the plants potted before the frost sets in, plunged in old tan or ashes, and covered by a frame, which should front the west. Those to flower from March to June, should be sown in pots not later than the third week in August, and treated in a manner similar to the November sowing. The third, or spring crop to succeed the last, may be sown about the middle of February; these should be placed in a frame in a gentle heat, and the plants thus obtained will be in perfection by the end of May. The suffruticose species may be increased by cuttings or seeds.

RHAMNACEÆ, or RHAMNADS. These are trees and shrubs, often with spines. They are found in nearly all parts of the world; several species of *Zizyphus* bear eatable fruit, known by the names of Lotus and Jujubes.

RHAMNUS, *Linn.* From the Celtic *ram*, signifying a tuft of branches. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. The plants belonging to this genus are mostly valued on account of their foliage. The stove and greenhouse kinds are easily grown in any light soil; and increase readily by cuttings under a glass. The hardy kinds grow in any common soil, and are usually propagated by layers and seeds. The plants and berries possess very strong purgative qualities. The juice of the berries of *R. catharticus* is sold under the name of syrup of buckthorn; the French berries of the shops are the unripe fruit of the same species, and are used for dyeing Turkey or Morocco leather yellow. The wood of *R. dahuricus* is red, and is known to the Russians by the name of sandal-wood. *Synonymes*: 1, *R. Clusii*; 2, *R. Willdenovianus*; 3, *R. rupëstris*; 4, *R. pumilus*; 5, *R. pumilus*. See *Berchemia*, *Ceanothus*, and *Zizyphus*.

RHIPSÁLIS, *Haworth*. From *rhips*, a willow branch; in allusion to the flexible branches. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. The plants of this genus are more singular than beautiful. A light vegetable soil, mixed with a little brick rubbish, suits them best; and they are readily increased by cuttings. *Synonymes*: 1, *Cactus pendula*; 2, *C. funalis*; 3, *Cereus alatus*.

RHIZOBOLACEÆ, or **RHIZOBOLS**. Trees of a large size, supplying excellent ship timber. The famous Suwarrow nuts are the produce of *Caryocar butyræum*, and belong to this order.

RHIZOBOLUS. See *Caryocar*.

RHIZOCTONIA, *De Candolle*. From *rhiza*, a root, and *kteinon*, to destroy; the name is applied in consequence of its destroying the roots upon which it grows. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. This species is found on *Côlchicum* and the roots of the *Crocus*—*Crocörum*.

RHIZOGENS are a class of parasitical flowering Fungi. To this class belong *Rafflesia*, *Cynomorium*, and other similar productions.

RHIZOMA, applied to root-like stems which spread under ground, similar to those of the *Iris*.

RHIZOMORPHA, *Roth*. From *rhiza*, a root, and *morphe*, form; the appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Botrytiaceæ*. The species of this genus are found beneath bark and in cellars—*divergens*, *medullaris*, *subcorticalis*, *subterranea*.

RHIZOPHORA, *Linn.* From *rhiza*, a root, and *phoreo*, to bear; the branches of this tree throw out roots very freely, which descend into the mud; consequently, every branch being supported by its own roots, one tree may, in this manner, extend over a considerable space. *Linn.* 11, Or. 1, Nat. Or. *Rhizophoraceæ*. The Mangrove may be tried in loam and sand, well mixed, and kept moist by the frequent application of salted water. It is difficult, if not altogether impossible, to cultivate it in this country.

Mangle . Pa. yel. . 6, S. Ev. T. 10 E. Indies 1820

RHIZOPHORACEÆ, or **MANGROVES**. Trees and shrubs, natives of the sea-shores in the tropics, where they root in the mud, and form close thickets down to the verge of the ocean.

RHIZOPOGON, *Trinius*. From *rhiza*, a root, and *pogon*, a beard. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. This species is found by the waysides. *Synonyme*: 1, *Lycopèrdon gibbòsum* —albus 1.

RHODANTHE, *Lindley*. From *rhodon*, a rose, and *anthos*, a flower; in allusion to the colour of the flower-heads. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. These are some of the most delightful annuals ever introduced to our collections. To obtain flowering plants in March, the seed should be sown in August, in a compost of decayed leaf-soil and light maiden earth, in equal parts, having the pots well drained. The seed-pots should not be placed in a lower temperature than 60, nor ever higher than 80 degrees. The earth should never be allowed to become too dry, taking care to apply water of a temperature nearly equal to that of the house. They will require several shifts previous to flowering; at the two last, viz., those in January and March, decayed manure should be substituted for leaf-mould, and a small portion of white sand added to the compost; a second sowing should be made in October and treated as the first, and they will flower beautifully the following May; and if a final sowing is effected in March, the plants will be ready to plant out in the flower-garden in May or June, where they will flower during the autumnal months. After the plants raised from any of the sowings have been potted, they should be removed to a much cooler house, and when properly established, placed on some elevated situation near the glass. Seed should be obtained from the plants grown in the greenhouse.

maculata . . Rose . 6, G. A. 1½ Australia
Manglesii . . Ro. yel. 6, G. A. 1½ S. River. 1832

RHODIOLA. See *Sedum*.

RHODIUM LIGNUM. See *Genista canariensis*, *Convolvulus floridus*, and *scoparia*, and *Physocalymma floribunda*.

RHODOCHITON, *Zucc.* See *Lophospermum*.

RHODODENDRON, *Linn.* From *rhodon*, a rose, and *dendron*, a tree; because of the appearance of the terminal bunches of flowers. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. The Rhododendron is decidedly one of the finest of all known genera, containing some of the most handsome, elegant, and showy shrubs; all of which are admirably adapted either for ornamenting the greenhouse or shrubbery, or for planting singly on lawns. Peat soil is most suitable to these plants, but they may also be grown in very sandy loam, or vegetable mould. Propagation may be effected by layers or seeds; if the latter mode be preferred, the seeds must be sown early in spring, in flat pans filled with peat soil, and the seed covered very slightly over; the pans should then be set in a close frame till the plants make their appearance, taking care to water very slightly when the soil appears dry. The seedlings having attained to a sufficient height, so as to admit of their being drawn without fear of injury,

should be removed into other pots or pans, using the same kind of mould. After this removal they should be kept in a close frame till fresh roots are produced, and they may then, by degrees, be hardened to the air. The small-wooded kinds may be also increased very freely by young cuttings, planted in sand under a glass. The tender kinds may be easily propagated by young cuttings torn off close to the stem, planted in sand, and plunged in heat under a glass. *Synonymes*: 1, *R. aromaticum*; 2, *R. cinnamomeum*; 3, *R. album*; 4, *R. Russeliianum*; 5, *R. Nobleianum*; 6, *R. officinale*; 7, *R. azaleoides*; 8, *R. myrtifolium*; 9, *R. obtusum*; 10, *R. indicum Smithii*, *Azalea indica Smithii*; 11, *R. GARDEN VARIETIES.—These are very numerous, and some exceedingly beautiful. For their colours and characters, refer to the nurserymen's catalogues, published annually.

RHODOLÆA, *Hooker*. From *rhodon*, a rose; the flowers are red. *Linn.* 10, Or. 1, Nat. Or. *Humamelidaceæ*. The only species of this genus yet introduced, bears a great resemblance both in habit and flowers to *Camellia*, to which genus refer for cultivation.

Championi . Rose . 5, G. Ev. S. 10 Hong Kong . 1849

RHODOMELA, *Agardh*. From *rhodon*, a rose, and *melos*, a limb; colour of the fronds. *Linn.* 24, Or. 8, Nat. Or. *Ceramiaceæ*. These plants are found in the ocean, on the seashore, &c.—*dentata*, *lycopodioides*, *pinastroides*, *scorpioides*, *subfusca*.

RHODOMENIA. From *rhodos*, red, and *hymen*, a membrane. *Linn.* 24, Or. 8, Nat. Or. *Ceramiaceæ*. The species of this genus, like those of the one immediately preceding, are found in the ocean, &c. *Synonymes*: 1, *Sphaerococcus bifidus*; 2, *S. ciliatus*; 3, *S. c. angustus*; 4, *S. c. jubatus*; 5, *S. c. palmatus*; 6, *S. c. spinosus*; 7, *S. cristatus*; 8, *S. laciniatus*; 9, *S. Palmétta*; 10, *S. reniformis*—*bifidus* 1, *ciliatus* 2, *c. angustus* 3, *c. jubatus* 4, *c. palmatus* 5, *c. spinosus* 6, *cristatus* 7, *laciniatus* 8, *Palmétta* 9, *polycarpa*, *reniformis* 10, *soboliferus*.

RHODORA. See *Rhododendron Rhodora*.

RHODORÆÆ. See *Ericaceæ*.

RHODORHIZA, *Lindley*. From *rhodon*, a rose, and *rhiza*, a root; fragrance of roots. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceæ*. Rose wood. See *Convolvulus*.

RHODOSTOMA, *Scheidw*. From *rhodos*, red, and *stoma*, a mouth. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. The cultivation of this pretty plant is the same as *Gardénia*.

gardenioides . White . 6, S. Ev. S. 2 S. Amer. 1759

RHODOTHÁMNUS, *Reich*. From *rhodon*, a rose, and *thamnus*, a shoot or branch. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. A genus separated from *Rhododendron*, and requiring precisely the same treatment. *Synonyme*: 1, *Rhododendron kamtschaticum*.

kamtschaticus . Purple . 5, H. Ev. S. 8 Siberia . 1840

RHÆAS, or COMMON POPPY. See *Papáver Rhæas*.

RHOMB, or RHOMBOID, like a Rhombus.

RHOMB-OVATE, } between rhomboid and egg-
RHOMBOID-OVATE, } shaped.

RHOPALA. See *Ropala*.

RHUBARB. See *Rheum*.

RHŪS, *Linn*. Derived from *rous*, in Greek, which is from *rhudd*, a Celtic word signifying red; alluding to the colour of the fruit and leaves of some species in autumn. *Linn.* 5, Or. 3, Nat. Or. *Anacardiaceæ*. The stove and greenhouse species will grow well in any common soil; and may be readily increased by ripened cuttings planted in sand, under a glass; the stove species must be placed in heat. The hardy kinds are rather ornamental, and well fitted for shrubberies; some are propagated by cuttings of the roots, and others by cuttings and layers. The juice of *R. radicans* and *Toxicodendron* is milky, stains black, and is extremely poisonous. *R. coriaria*

is powerfully astringent, and is used in tanning Turkey or Morocco leather. *Synonymes*: 1, *R. Bücku Amela*; 2, *R. lucida*; 3, *Laurus caustica*; 4, *R. lucida*; 5, *spicata*; 6, *oryzanthoides*; 7, *caroliniana*, *elegans*; 8, *elongata*; 9, *thezans*; 10, *venenata*; 11, *juglandifolia*. See *Omphalodium* and *Pterocarya*.

RHYNCHOGLÖSSUM, *De Candolle*. From *rhynchos*, a beak, and *glossa*, a tongue; the lower lip of the flower in the form of a tongue-like beak. *Linn.* 2, Or. 1, Nat. Or. *Gesneriaceæ*. A pretty plant, native of Ceylon, and easily cultivated in the stove. *Synonyme*: 1, *Loxotis zeylanica*.

zeylanicum 1. Blue .7, S. A. 1 Ceylon 1844

RHYNCHOSIA, *Loureiro*. From *rhynchos*, a beak; the keel of the flower is beaked. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. These plants are not possessed of much beauty; any rich light soil suits them; and they are easily increased by cuttings or seeds. *Synonymes*: 1, *Glycine angustifolia*; 2, *Dolichos scarabaeoides*; 3, *Glycine caribæa*; 4, *G. tomentosa*, *volubilis*; 5, *G. erecta*; 6, *Dolichos minimus*; 7, *G. mollis*; 8, *G. phaseoloides*; 9, *G. precatória*; 10, *G. reniformis*; 11, *G. reticulata*; 12, *G. rhombifolia*; 13, *Dolichos scarabaeoides*; 14, *G. suaveolens*; 15, *G. picta*, *Ogitis violaceus*; 16, *G. viscosa*, *glutinosa*.

erecta 5 . Sulphur 7, S. Her. P. 3 N. Amer. 1820
reniformis 10 Yellow .7, F. De. Tw. 2 Carolina. 1806
reticulata 11 White .8, S. Ev. Tw. 6 Jamaica. 1779
suaveolens 14 Yel. red 8, S. Ev. S. 3 E. Indies 1816
angustifolia 1, biflora 2, difformis 4, *Fredericiæ*, *minima* 6, *mollis* 7, *phaseoloides* 8, *precatória* 9, *rhombifolia* 12, *scarabaeoides* 13, *violacea* 15, *viscosa* 16, *volubilis*.

RHYNCHOSPÉRMUM, *A. Dec.* From *rhynchos*, a snout, and *sperma*, a seed. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. A pretty climber, not much unlike a *Jasmine*. It is of easy culture in light loam and peat, and is readily propagated by cuttings.

jasminoides . White .7, G. Ev. Cl. 10 Shanghai 1846

RHYNCHOSPORA, *Vahl.* From *rhynchos*, a beak, and *spora*, a seed. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceæ*. Worthless plants, growing in bogs, &c.—*alba*, *aurea*, *comata*, *distans*, *fusca*, *læca*.

RHYTIDOPHYLLUM, *Martius*. From *rhytis*, a wrinkle; and *phyllon*, a leaf. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceæ*. For culture, see *Gesnera*.

auriculatum . Red yel. 8, S. Ev. S. 1 Brazil .1834

RHYTISMA, *Fries*. From *rhytis*, a wrinkle; appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. Found upon sycamore leaves and other live plants, as some of the specific appellations imply—*acrinum*, *Andromedæ*, *corrugatum*, *punctatum*, *salicinum*, *Urtica*.

RIB, the projecting vein of anything.

RIBESIACEÆ. See *Grossulariaceæ*.

RIBES, *Linn.* From *Ribas*, the name of an acid plant mentioned by the Arabian physicians, which is known to be *Rheum Ribes*. *Linn.* 5, Or. 1, Nat. Or. *Grossulariaceæ*. This is a valuable genus, and contains the gooseberry and currant, the uses of which every cottager is familiar with; and in addition to these much-esteemed fruits, some of the species are well suited for ornamenting shrubberies. The most ornamental species are *R. atropurpureum*, *aureum*, *sanguineum*, and *speciosum*. All the species of *Ribes* will grow in any soil, and increase from cuttings, planted in autumn, or early in spring. *Synonymes*: 1, *R. aureum sanguineum*; 2, *R. hybridum*; 3, *R. reclinatum*; 4, *Uva crispata*; 5, *R. oxyacanthoides*; 6, *R. glandulosum*; 7, *R. laxiflorum*; 8, *R. malvaceum*; 9, *R. stamineum*; 10, *R. missouriense*; 11, *R. stamineum*; 12, *R. feroax*.

RIBESIUM. See *Ribes*.

RIB-GRASS. See *Plantago lanceolata*.

RICCIA, *Linn.* In honour of P. Francisco Riccio, a Florentine botanist. *Linn.* 24, Or. 6, Nat. Or. *Ricciaceæ*. The species belonging to this genus are found floating in ditches, &c.—*frutans*, *glauca*, *obtusata*, *natans*, *spuria*.

RICCIACEÆ, or **CRYSTAL-WORTS**. This is an order of plants of a diminutive size, chiefly inhabiting mud and water, sometimes swimming. They are mostly annual.

RICE. See *Oryza*.

RICE-PAPER OF CHINA. See *Aràlia Japónica*.

RICHARDIA, *Kunth*. In honour of L. C. Richard, an eminent French botanist. *Linn.* 7, Or. 1, Nat. Or. *Ariceæ*. *R. aethiopica* is a desirable plant, and thrives in any light rich soil, it is readily increased by offsets from the roots; while, on account of its frequent flowering, and large sweet-scented flowers, it is well worthy of a place in every collection. *Synonyme*: 1, *Calla aethiopica*. See *Richardsonia*.

aethiopica 1 . White . 3, G. Her. P. 2 C. G. H. 1731
albo-maculata . Grn. wt. 3, G. Her. P. 2 Africa . 1858
hastata . . . Grn. wt. 3, H. Her. P. 2 Natal . 1858

RICHARDSONIA, *Kunth*. In memory of Richard Richardson, an English botanist. *Linn.* 6, Or. 1, Nat. Or. *Cinchonaceæ*. This genus grows well in loam and peat; and cuttings root readily in the same kind of soil, under a glass, in a little heat. The white *Ipecacuanha* of the shops is the root of *R. scabra*. *Synonymes*: 1, *Richardia scabra*, *Richardsonia pilosa*.

scabra 1 . . . White . 9, S. Her. P. 2 Brazil . 1814
stellaris . . . White . 7, H. A. 1 Brazil . 1836

RICHIEA, *R. Brown*. In memory of Mr. Richie, an African traveller, who died in 1821, at Tripoli. *Linn.* 13, Or. 1, Nat. Or. *Cappari-daceæ*. *R. fragrans* is a stove climber: it grows best in a mixture of loam, peat, and sand; and cuttings root readily in sand, under a glass, in heat. *Synonymes*: 1, *Cratæva fragrans*, *C. capparioides*.

fragrans 1 . White . 6, S. Ev. Cl. 6 S. Leone . 1795
polypétala . Yel. grn. 6, S. Ev. S. 3 W. Africa . 1859

RICINUS, *Linn.* From *ricinus*, a tick; resemblance in the seeds. *Linn.* 21, Or. 1, Nat. Or. *Euphorbiaceæ*. The plants belonging to this genus will thrive in any rich soil, and are easily increased by seeds and cuttings. The well-known Castor oil is the produce of *R. communis*.

RICOTIA, *Linn.* Probably after some unknown botanist. *Linn.* 15, Nat. Or. *Brassicaceæ*. A pretty little annual, well fitted for adorning rock-work, on which the seed may be sown. A light sandy soil suits it best. *Synonymes*: 1, *R. cegyphiaca*.

Lunaria 1	Li. pur.	.6, H.	A. 3 Egypt	.1757
-----------	----------	--------	------------	-------

RIEDLEIA, *Ventenat*. In honour of M. Riedley, a French naturalist, who accompanied Captain Baudin round the world. *Linn.* 16, Or. 2, Nat. Or. *Sterculiaceæ*. The plants are not worth growing, except for the purpose of making up a collection. They are all of the easiest culture, and are readily increased by seeds. *Synonymes*: 1, *Melochia caracasana*; 2, *M. corchorifolia*; 3, *M. deprésso*; 4, *M. supina*; 5, *M. truncata*.

caracasana 1	White	.6, S. Ev. S.	2 Caraccas	.1817

borbonica, concatenata, corchorifolia 2, deprésso 3, polystachia, supina 4, truncata 5, velutina.				

RIGA BALSAM is obtained from *Styrax Benzoin*.

RIGID, stiff, untractable.

RIGIDELLA, *Lindley*. From *rigidus*, stiff; in allusion to the rigidity of the flower-stalk when supporting the seed-vessel. *Linn.* 16, Or. 1, Nat. Or. *Iridaceæ*. These are very handsome bulbous plants, requiring similar treatment to *Tigridia*.

flammea	Flame	.5, S. Bl. P.	2 Mexico	.1839
immaculata	Crimson	.6, S. Bl. P.	2 Guatemala	1839
orthantha	Crimson	.6, S. Bl. P.	2 Mexico	.1846

RIMOSE, having a longitudinal fissure or fissures, chinky.

RINDERA, *Pallas*. In honour of Dr. Rinder, once dean of medicine in Moscow. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceæ*. This plant is of the easiest culture, but of no beauty. *Synonymes*: 1, *R. lævigata*, *Cynoglossum Rindera*.

tetráspis 1	Red	.6, H. Her. P.	1 Siberia	.1818
-------------	-----	----------------	-----------	-------

RINGENT, gaping.

RINGING, removing a small strip of bark from around a branch, in the form of a ring.

RIPIDIUM, *Trinius*. From *rhypidion*, a little

fan; in allusion to the inflorescence. *Linn.* 23, Or. 1, Nat. Or. *Graminaceæ*. Grasses, growing in any common soil, and increased by divisions. *Synonymes*: 1, *Andropogon Ravennæ*, *Saccharum Ravennæ*, *Erianthus Ravennæ*; 2, *A. strictus*, *S. adpressum*.

Ravennæ 1	Apetal	.7, Grass 2	S. Europe	.1816
strictum 2	Apetal	.7, Grass 2	Hungary	.1802

RIPOGONUM, *Forster*. From *ripas*, a flexible twig, and *gonos*, a shoot. *Linn.* 6, Or. 1, Nat. Or. *Smilacææ*. Ornamental climbers, thriving in loam and peat; and increasing by young cuttings, planted in sand, under a glass.

albua	White	.6, G. Ev. Cl.	3 N. Hol.	.1820
parviflorum	White	.6, G. Ev. Cl.	2 N. Hol.	.1820

RITRO. See *Echinops Ritro*.

RIVEA. Dedicated by Choisy, to Auguste de la Rive, a physiologist of Geneva. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceæ*. For culture, &c., see *Ipomœa*. *Synonyme*: 1, *Ipomœa gangetica*.

tiliaefolia 1	White	.6, S. Ev. Tw.	4 E. Indies	1812
ornata	Purple	.6, S. Ev. Tw.	4 E. Indies	1824

RIVINA, *Linn.* In honour of A. Q. Rivinus, a botanist of Saxony. *Linn.* 4, Or. 1, Nat. Or. *Phytolaccaceæ*. These plants are mostly valued on account of their ornamental appearance when fruiting; they grow in any light soil, and are readily increased by seeds or cuttings.

brasiliensis	Green	.6, S. Ev. S.	2 Brazil	.1790

RIVULARIA, *Roth*. From *rivulus*, a rivulet; place of growth. *Linn.* 24, Or. 7, Nat. Or. *Conferveææ*. These plants are found in lakes, ditches, &c. *Synonyme*: 1, *Linkia dura*—angulosa, applanata, atra, botryoides, calcarea 1, crustacea, nitida, plana, plicata. See *Corynephora* and *Mesoglossa*.

ROBÉRGIA, *Schreber*. In honour of Laurent Roberg, professor of medicine at Upsal. *Linn.* 10, Or. 4, Nat. Or. *Conmaraceæ*. An ornamental plant, growing in loam and peat; and increased by cuttings in sand, under a glass, in heat.

frutescens	White	.5, S. Ev. S.	6 Guiana	.1823
------------	-------	---------------	----------	-------

ROBERTIA, *De Candolle*. In honour of M. Robert, a Corsican botanist. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Mere weeds, of the most common culture; seeds. *Synonyme*: 1, *Hypochæris pinnatifida*—pinnatifida 1, taraxacoides.

ROBERTSONIA. See *Saxifraga*.

ROBINIA, *De Candolle*. In honour of Jean Robin, a French botanist, once herbalist to Henry IV. of France. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The hardy kinds of *Robinia* are remarkably handsome when in flower, and well adapted for ornamenting the shrubbery. They will grow in any common soil; and are increased either by layers or by grafting the rare species upon the common kinds, chiefly

on *R. Pseud-acacia*. The stove and greenhouse species should be grown in a mixture of loam, sand, and peat; and young cuttings will root, if planted in sand, under a glass. *R. Pseud-acacia*, if properly seasoned, is equally as strong and as durable as oak. *Synonymes*: 1, *R. hybrida*, *ambigua*, *echinata*; 2, *R. grandiflora*, *macrophylla*; 3, *R. amorphæfolia*; 4, *R. monstrosa*; 5, *R. pendula*; 6, *R. procera*; 7, *R. sophoræfolia*; 8, *R. stricta*; 9, *R. inermis*. See *Ammodendron*, *Caragana*, *Halimodendron*, *Lonchocarpus*, *Ormosia*, *Pictetia*, *Pongamia*, *Tephrosia*, and *Virgilia*.

ROBUR. See *Quercus Robur*.

ROCCABOLE. See *Allium Scorodopræsum*.

ROCCELIA, De Candolle. Altered from the Portuguese *Roccha*, signifying a rock; in allusion to its place of growth. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. *R. tinctoria* is the *Orchall* of the dyers, so famed for the fine purple colour which it yields—*fusiformis*, *tinctoria*.

RÔCHEA, De Candolle. In honour of M. de la Roche, a botanical writer. *Linn.* 5, Or. 5, Nat. Or. *Crassulaceæ*. This is a very elegant genus of succulent plants when in flower. They require to be treated in a manner similar to that recommended for the genus *Globulea*.

ROPE-GRASS. See *Rethio*.

ROSA, Linn. From the Celtic *rhod*, red; in reference to the prevailing colour of the flowers. *Linn.* 12, Or. 3, Nat. Or. *Rosaceæ*. The name of this genus carries with it a charm as well for the beauty as the unrivalled fragrance of its flowers, and it has justly been the theme of writers, from the remotest antiquity, as a favourite and universal object of culture among all civilised nations. The plants vary in size, and the colours are red, white, purple, yellow, striped, or of almost numberless shades and mixtures, from single to semi-double and double. As it would be impossible to give a standard list of the most improved cultivated kinds, owing to the number of superior sorts raised annually from seed, and many of the varieties being annually lost, going out of repute, or entirely changing their appearance from time and local circumstances; we would on that account recommend those who wish to form a selection of these popular plants, to

resort to the latest and best catalogue of Roses now actually in cultivation; such as that of Messrs. Rivers and Son, of Sawbridgeworth, Hertfordshire, which is not only the best as a catalogue, but as containing other particulars worthy of the cultivator's consideration. The rose is propagated by every method capable of being applied to ligneous plants; by seeds for new varieties, for obtaining sweet-briar, and for stocks. The Indian, Chinese, and climbing kinds, by cuttings of the young wood placed in a gentle heat. The Moss, and Provence or Cabbage rose, by layers or suckers; also by cuttings of the large fleshy roots, which being planted, and covered with a little light rich earth, will each throw up one or more shoots. This will be found a good and an expeditious mode of obtaining young plants. Budding is chiefly used to produce standard roses, or to increase the number of kinds upon one plant; it is also resorted to to preserve some of the more tender kinds which languish upon their own roots. *Rosa canina*, or common dog-rose, is the best for budding upon; it is asserted by some cultivators, that all roses flower finer and last longer, by being budded on this stock. The Moss and Provence kinds are well adapted for forcing in winter and spring; the Chinese, and other tender kinds, for decorating the greenhouse nearly throughout the year. To keep a succession of flowers of the first-named kinds from Christmas, until their natural season of flowering, a quantity should be introduced into the forcing-house every month from the first of October to the first of March; the dung heat at first should not be more than 55 degrees, but it may be gradually raised to 65 or 70 degrees of Fahrenheit. The fruit of *R. canina* is astringent, and employed in medicine in cases of chronic diarrhoea and other maladies. The various preparations from the flowers are rose-water, vinegar of roses, attar, or essence of roses, &c. *Synonymes*: 1, *R. hybrida*; 2, *R. rubiginosa inodora*; 3, *R. canina cæsia*; 4, *R. leucantha*; 5, *R. canina dumetorum*; 6, *R. parvifolia*; 7, *R. Fraseriana*; 8, *R. odorata*; 9, *R. floribunda*; 10, *R. laxa*; 11, *R. eglanteria*; 12, *R. platyphylla*, *R. Roxburghii*; 13, *R. scaberrimula*.

ROSACEÆ, or ROSEWORTS. A large group of plants, well known for their beauty, fragrance, and grateful products. Of the latter we may mention the Strawberry, Raspberry, and Black-berry.

ROSCOEÆ, Smith. In honour of William Roscoe, the famous historian of the Medici, and the founder of the Liverpool Botanic Garden. *Linn.* 1, Or. 1, Nat. Or. *Zingiberacææ*. A genus of pretty plants when in flower. A light turfy loam suits them best, and they are readily propagated by divisions.

ROSE. See *Rösa*.

ROSEÆ, Mart. See *Iresine*.

ROSE ACÁCIA. See *Robinia hispida*.

ROSE-APPLE. See *Jambösa*.

ROSE-BAY. See *Epilobium angustifolium*.

ROSE-CAMPION. See *Lychnis*.

ROSELLATE, when leaves are disposed like the petals of a rose.

ROSEMARY. See *Athamanta Libanotis*.

ROSEMARY. See *Cachrys Libanotis*.

ROSEMARY. See *Rosmarinus*.

ROSE OF HEAVEN. See *Lychnis Cæli-rösa*.

ROSE OF JAMAICA. See *Mariäna*.

ROSE OF JERICO. See *Anastatica*.

ROSE OF THE WORLD. See *Camellia japonica Rösa-mündi*.

ROSE-PLANTAIN. See *Plantago major rosea*.

ROSE-ROOT. See *Sedum Rhodiola*.

ROSE SNOW-BALL-TREE. See *Viburnum Opulus roseum*.

ROSETANGLES. See *Ceramiacææ*.

ROSEWOOD. See *Génista canariensis*, *Convolvulus floridus* and *Scoparia*, *Physocalymma floribunda* and *Rhodorhiza*.

ROSLINIA, Don. Meaning unknown. *Linn.* 5, Or. 1, Nat. Or. *Gentianacææ*. See *Chirönia*.

ROSMARINUS, Linn. From *ros*, dew, *marinus*, of the sea; on account of its maritime habitat. *Linn.* 2, Or. 1, Nat. Or. *Lamiacææ*. A genus of pretty shrubs, requiring to be grown in a rather sheltered, dry situation; and cuttings of the ripened wood root readily, if planted in spring. *R. officinalis*, is the herb employed in the manufacture of Hungary water; tea made from it is also considered very beneficial to persons troubled with nervous headache, and it is one of the most powerful preparations for stimulating and strengthening the nervous system.

ROSMARINUS. See *Sphacèle*.

RÖSSOLI is a famous Italian liquor made from some species of Sun-dew (*Drosera*).

ROSTELLARIA, Nees. See *Justicia*.

ROSTRARIA, Trinius. From *rostrum*, a beak. *Linn.* 3, Or. 2, Nat. Or. *Graminacææ*. A grass of no interest. *Synonyme*: 1, *Bromus dactyloides*, or *Dactylis pungens*—pubescens 1.

ROTATÆ; when the limb of a monopetalous corolla is flat, and the tube very short, it is called rotate, or wheel-shaped.

RÖTHIA, Persoon. In honour of A. W. Roth, of Bremen, a German botanist. *Linn.* 16, Or. 6, Nat. Or. *Fabacææ*. The seeds of this curious little plant should be sown on a warm border, where the plants are intended to flower. *Synonymes*: 1, *Glöcine humifusa*, *Cledme prostrata*.

- trifoliata 1 . . . Sulphur . 7, H. Tr. A. 2 .

RÖTHIA, Lam. Named as above. *Linn.* 19, Or. 1, Nat. Or. *Asteracææ*. Mere weeds, not worth cultivation—*andryalodes*, *chieranthifolia*, *runcinata*. See *Hymenopappus*.

ROTHMÄNNIA. See *Rändia*.

ROTTBOELLIA, Linn. In honour of C. F. Rottboell, a Danish botanist. *Linn.* 3, Or. 2, Nat. Or. *Graminacææ*. Stove grasses, growing in any common soil, and increasing by seeds. See *Monerma* and *Ophürus*.

- exaltata . . . Apetal . 6, S. Grass 6 E. Indies . 1806
 perforata . . . Apetal . 6, S. Grass 4 E. Indies . 1822

RÖTTLEA, *Roxburgh.* In honour of Dr. Rottler, a Danish missionary. *Linn.* 22, Or. 11, Nat. Or. *Euphorbiaceæ*. Uninteresting stove plants, which grow freely in loam and peat; and may be increased by cuttings, under a glass. *Synonyme*: 1, *Crêton paniculata*—brasiliensis, paniculata L, tinctoria.

ROUBËVA. See *Chenopodium*.

ROUCON. See *Bixa Orellana*.

ROUGE PLANT. See *Rivina tinctoria*.

ROUGH CHERVIL. See *Anthriscus*.

ROUGH PLUM OF SIERRA LEONE. See *Parnarium excelsum*.

ROUNDISH DELTOID, between orbicular and deltoid.

ROUPALA. See *Ropala*.

ROUFÉLLIA, *Wall.* Named in honour of Charles Roupel, of South Carolina. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. This is the far-famed Cream-fruit tree, and forms a very handsome fragrant shrub. It is a nice plant to train to a trellis or a rafter, where its rose-coloured flowers are seen to perfection. Light loam and leaf-mould, in equal parts, suits it well, and it is easily propagated by cuttings.

grata . . . White . red . . 6. S. Ev. S. 10 S. Leone . 1847

ROUREA. See *Cinnarus*.

ROWAN-TREE, or **MOUNTAIN-ASH**. See *Pyrus aucuparia*.

ROXBURGHIA, *Dryander*. In honour of the late William Roxburgh, M.D., director of the botanic garden, Calcutta. *Linn.* 8, Or. 1, Nat. Or. *Roxburghiaceæ*. Interesting plants, thriving in light turfy loam, and readily increasing by suckers.

gloriosoides . . . Pk. yel. . 7, S. Ev. Cl. 6 E. Ind. 1803
viridiflora . . . Green. . . 8, S. Ev. Cl. 6 E. Ind. 1836

ROXBURGHIAEÆ, or **ROXBURGH-WORTS**. A small group of twining shrubs, all natives of the hot parts of India.

ROYAL BAY. See *Laurus nobilis*.

ROYËNA, *Linn.* In honour of Adrian von Royen, professor of botany at Leyden. *Linn.* 10, Or. 2, Nat. Or. *Ebenaceæ*. These plants require to be grown in a mixture of loam, peat, and sand; and ripened cuttings strike freely in sand, under a glass. *Synonyme*: 1, *R. cuneata*.

ROYLEA, *Wallich.* In honour of John Forbes Royle, M.D., late superintendent of the botanic garden at Saharumpur; and Professor of Materia Medica in King's College, London. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. An interesting little shrub, growing in any light rich soil. Cuttings root readily in the same kind of soil, with a glass over them. *Synonyme*: 1, *Ballota cinerea*.

elegans 1 . . . Purple . 7, G. Ev. S. 2 Nepal . 1824

RÖYOC. See *Morinda Rôyoc*.

RUBEFACIENT, any thing which reddens the skin, and raises slight cutaneous inflammation.

RUBËNTIA. See *Toddalia*.

RUBËNTIA. See *Eleodendron olivina*.

RUBIA, *Tournefort*. From *ruber*, red; in allusion to the colour of the roots. *Linn.* 4, Or. 1, Nat. Or. *Galiaceæ*. Interesting plants. Any common garden soil suits them, and they are easily increased by seeds, or divisions of the roots. The root of *R. tinctorum* is one of the most valuable dyes with which we are acquainted; it is known under the name of *madder*, and is a very important article of commerce. *Synonyme*: 1, *R. galioides*.

fruticosa, f. galioides 1, lucida, peregrina.

RUBIGO, *Link.* An ancient latin name for blight. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. The plants of this genus are popularly called mildew, or blight. The species is found on decaying alders—*alnea*.

RUBUS, *Linn.* From the Celtic *rub*, signifying red; in reference to the colour of the fruit of some of the species. *Linn.* 12, Or. 3, Nat. Or. *Rosaceæ*. An extensive and interesting genus of plants. The shrubby kinds of *Bramble* grow best in a rich loam; and are readily increased by suckers from the root, or by cuttings. The herbaceous species thrive best in peat soil, and are likewise propagated by suckers. The well known and much-esteemed Raspberry is the fruit of *Rubus Idæus* and its garden varieties. The fruit of *R. Chamæmorus* is acid, and pleasant to the taste. It is known by the name of Cloudberry, from the plants being found in high situations. The Scottish Highlanders and Laplanders esteem it one of their most grateful and useful fruits, more especially on account of its long duration. *Synonymes*: 1, *R. pistilatus*; 2, *R. pedunculatus*; 3, *R. vulgaris*; 4, *R. flavus*; 5, *R. inermis*; 6, *R. discolor*, *abruptus*; 7, *R. f. plenus*; 8, *R. f. albus*; 9, *R. paniculatus*; 10, *R. pauciflorus*; 11, *R. echinatus*; 12, *R. villosus vulpinus*; 13, *R. ægopodioides*.

RUFFIA. See *Sagus Ruffia*.

RUFESCENT, rather rusty.

RUFOS, reddish, orange-coloured, rusty.

RUGOSE, rough, coarsely wrinkled.

RUGOSITIES, protuberances.

RUGULOSE, finely wrinkled.

RUÍZIA, *Cavanilles*. In honour of Don Hippolito Ruiz, a traveller, and in conjunction with Pavon, author of "Flora Peruviana et Chilensis." *Linn.* 16, Or. 8, Nat. Or. *Sterculiaceæ*. Desirable shrubs, growing in a mixture of loam, peat, and sand; and cuttings root freely if planted in the same kind of soil, under a glass, in heat. See *Boldoa*.

lobata . . .	White . . .	5, S. Ev. S. 6	Bourbon . 1816

RUST ON PLANTS. See *Uredinææ*.

RUTA, *Linn.* From the Greek *rule*, from *ruo*, to flow; probably in reference to some reputed qualities of the plants; hence the English word *Rue*; *Linn.* 8, Or. 1, Nat. Or. *Rutææ*. The species of *Rue* are all of the simplest culture. Any light rich soil suits them, and they are readily increased by cuttings placed under a hand-glass; or by seeds, which are produced in abundance by many of the species. *Synonymy*: 1, *R. chalepensis*. See *Apophyllum*.

graveolens . Yel. grn. 8, H. Ev. S. 3 S. Europe 1562
albiflora White . 7, F. Ev. S. 3 Nepal . 1823
angustifolia 1, *bracteosa*, *corsica*, *divaricata*, *macrophylla*, *montana*, *pinnata*.

RUTÆÆ, or **RUE-WORTS**. Trees and shrubs, all characterised by their strong smell and bitterness. Some bear handsome flowers, and are esteemed by cultivators.

RUTA-BAGA. See *Brassica campestris Napobrassica*.

RUTA-MURARIA. See *Asplenium Ruta-muraria*.

RÜYSCHIA, *Jacquin*. In honour of Fred. Ruysch, M.D., who published the "Hortus Amstelodamensis," a posthumous work of John Commelin; he died in 1731. *Linn.* 5, Or. 1, Nat. Or. *Marcgraviææ*. This very desirable

shrub will succeed well in a mixture of loam and vegetable mould; and ripened cuttings will root freely in sand, under a glass, in heat. In Guiana and the Caribbee islands, it is a parasitical under-shrub, rooting on trees in moist woods, similarly to the ivy with us.

clusiæfolia . Purple . 6, S. Ev. S. 4 W. Indies . 1823

RYÂNÆA, *De Candolle*. In honour of John Ryan, M.D., F.R.S., a correspondent of Vahl. *Linn.* 13, Or. 1, Nat. Or. *Flacourtiææ*. This is a very beautiful stove plant, thriving in peat and loam; and propagated by ripened cuttings, planted in sand, under a glass, in heat.

speciosa . Cream . 8, S. Ev. S. 10 Trinidad . 1823

RYE. See *Secalæ*.

RYE GRASS. See *Lolium*.

RYTIDOPHYLLUM, *Martius*. From *rytis*, a wrinkle, and *phyllon*, a leaf; the surface of the upper side of the foliage is wrinkled. *Linn.* 14, Or. 2, Nat. Or. *Gesneriææ*. Ornamental under-shrubs, nearly related to *Gesnera*, which see for culture, &c. *Synonymy*: 1, *Gloxinia tigridia*. See *Gesnera*.

SAGERËTIA, *Brongn.* From M. Sageret, a distinguished French agriculturist. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. For the culture of this plant, see *Zizyphus*. *Synonyme*: 1, *Zizyphus hamosus*.

hamosa	1. Green	5 G. Ev. Cl.	6 Nepal	
--------	----------	--------------	---------	--

SAGINA, *Linn.* From *sagina*, fatness; in allusion to its presumed nourishing qualities for sheep. *Linn.* 4, Or. 3, Nat. Or. *Caryophyllaceæ*. Hardy annual weeds, growing in any soil. *Synonymes*: 1, *Ménchia cerastoides*; 2, *M. erecta*.

filiformis	White	6, H.	A. 4 Pyrenees	1824
------------	-------	-------	---------------	------

apétala, *cerastoides* 1, *erecta* 2, *maritima*, *procumbens*, *p. plena*, *subulata*.

SAGITTARIA, *Linn.* From *sagitta*, an arrow; because of the resemblance to the head of that weapon in the leaves of some species. *Linn.* 21, Or. 9, Nat. Or. *Alismaceæ*. Aquatics, requiring a loamy soil; and readily increasing by divisions. The stove and greenhouse kinds may be planted in a tub or large pot, with a little soil at the bottom, and filled up with water; a coating of pebbles may be laid on the soil to prevent the water from disturbing it,

and rendering it muddy. *Synonyme*: 1, *hastata*.

SAIRÁNTUS, *Don*. See *Nicotiana glutinosa*.

SALÁCIA, *Linn.* From *Salacia*, in heathen mythology, the wife of Neptune. *Linn.* 3, Or. 1, Nat. Or. *Celastraceæ*. Plants of no great beauty; succeeding in loam and peat, and increasing by ripened cuttings planted in sand, under a glass. The fruit of *S. pyriformis* is eatable. It is about the size of a Bergamot

Pear, and of a sweet, rich flavour. *Synonymes*: 1, *Tonsella pyriformis*; 2, *T. scândens*. *pyriformis* 1. Green 8, S. Ev. Cl. 6 Guiana . . 1825
scândens 2. Green 8, S. Ev. Cl. 6 Guiana . . 1824

SALPE. See *Tacca pinnatifida*.

SALICACEÆ, or WILLOW-WORTS, are a group of well known trees and shrubs. The Willow, Sallow, and Poplar, are representatives of the order.

SALICARIA. See *Lýthrum salicaria*.

SALICORNIA, Linn. From *sal*, salt, and *cornu*, a horn. *Linn.* 1, Or. 1, Nat. Or. *Chenopodiaceæ*. These plants will grow in any common soil, and are readily increased by divisions. The plants being natives of the sea-shore, they will thrive better if a little salt be occasionally sprinkled on the surface of the soil. Soda is yielded in great quantities by the species of *Salicornia*.

SALISBÜRIA, Smith. In honour of Richard Anthony Salisbury, a distinguished English botanist. *Linn.* 21, Or. 9, Nat. Or. *Taxaceæ*. The Maiden-hair Tree is well worth growing, if only on account of its singular foliage. The male and female flowers being produced on two different trees, the readiest way of obtaining fruit would be to graft or bud both sorts on the same tree, or by growing both trees near each other. Common garden soil suits it, and it is readily increased by layers. The fruit has never been perfected in this country, but in China the tree is extensively cultivated for the purpose of procuring it.

adiatifolia . . . Apetal 4, H. De. T. 25 Japan . . 1754
incisa . . . Apetal 4, H. De. T. 25 Japan . .

SALISIA, Lindley. In honour of the Countess de Salis, a great lover of horticulture. *Linn.* 18, Or. 3, Nat. Or. *Myrtaceæ*. For the culture of this pretty plant, see *Melaleuca*.
pulchella . . . Rose . . 5 G. Ev. S. 3 Swan R. . . 1837

SÁLIX, Linn. From *sal*, near, and *lis*, water, Celtic; in allusion to its place of growth; or from *salire*, to leap; because of the rapidity of its growth. *Linn.* 22, Or. 2, Nat. Or. *Salicaceæ*. An extensive genus of well-known, useful, and ornamental trees and shrubs. They all delight to grow in swampy places, and are increased by cuttings; though some of the more rare alpine kinds root with difficulty. Many of the species of willow are extensively grown for the manufacture of basket-rods. The best sorts for cultivating for hoops are *S. caprea* and *S. viminalis*. The branches of some of the species are used as stakes, poles, handles to rakes, hoes, and a great variety of economical purposes. In the north of Europe the bark of *S. álba* is used for tanning leather, and for dyeing yarn of a cinnamon colour, and the leaves and young shoots are given to cattle in a green state, or dried like the twigs of the

birch, and laid up for winter fodder. The leaves of *S. herbacea*, soaked in water, are employed in Iceland for tanning leather. *Synonymes*: 1, *S. violacea*; 2, *S. cœrulea*; 3, *S. uliginosa*; 4, *S. annularis*; 5, *S. Napoleóna*; 6, *S. præcox*; 7, *S. argentea*; 8, *S. adscendens*, *parvifolia*; 9, *S. incubacea*; 10, *S. prostrata*; 11, *S. repens*; 12, *S. malifolia*; 13, *S. serrulata*; 14, *S. riparia*; 15, *S. arbutifolia*; 16, *S. phlyctifolia*; 17, *S. Fluggeana*; 18, *S. Hoppeana*.

SÁLMEA, De Candolle. In honour of Prince Charles, of Salm Dyck, in Holland, an enthusiastic cultivator of plants. *Linn.* 19, Or. 1, Nat. Or. *Asteracea*. A genus of pretty stove twiners, succeeding best in a light rich soil; and readily increasing by cuttings of the young wood planted in sand, under a glass, in heat. *Synonymes*: 1, *Bidens scandens*, *Hopkirkia scandens*. See *Carludovicia*.

SALOOP. See *Orchis*.

SALPIÁNTHUS. See *Boldoa*.

SALPICHLĒNA, *J. Smith*. From *salpinx*, a tube, and *chlaina*, a cloak; fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove fern. *Synonymes*: 1, *Bléchium volubile*.

volubilis 1. . Yel. brn. 7, S. Her. P. 2 Brazil . 1842

SALPICHRŌA, *Miers*. From *salpinx*, a tube, and *chroos*, skin; form and texture of flowers. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. A new shrubby plant, with small hairy leaves, between heart-shaped and ovate, on long petioles, and with a slender graceful habit of growth. It has bell-shaped flowers of a greenish-yellow colour, springing out singly, on lengthened footstalks, from the axils of the leaves, and taking a drooping direction.

glandulosa . . Yellow 7, S. Ev. S. 2 Chili . . 1344

SALPIGLŌSSIS, *Ruiz and Pavon*. From *salpinx*, a tube, and *glossa*, a tongue; alluding to the tongue-like style in the mouth of the corolla. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. This genus of very showy plants should be in every ornamental collection. For culture, &c., see *Schizanthus*. *Synonymes*: 1, *S. atropurpurea*; 2, *S. Barclayana*; 3, *S. picta*; 4, *S. straminea*. See *Petunia*.

SALVADORACEÆ, or SALVADORADS. An order of small trees and shrubs, found in India, Syria, and North Africa. *Salvadōra persica* bears a small succulent fruit which tastes like garden cress.

SÁLVIA, *Linn.* From *salvo*, to save; in allusion to the healing qualities of the sage. *Linn.* 2, Or. 1, Nat. Or. *Lamiaceæ*. This is a very extensive genus, consisting chiefly of extremely showy flowering plants, well worthy of cultivation. They are easily grown in a rich light soil. The shrubby kinds increase freely by cuttings of the young wood, under a glass; those of the stove species must be placed in heat; the herbaceous kinds must be multiplied by division of the roots. The seeds of the annual and biennial kinds simply require to be sown in the open ground where they are intended to bloom. The common sage, *Sálvia officinālis*, is a well known culinary herb. *Synonymes*: 1, *S. pátula*, *pyramidalis*; 2, *S. colorata*; 3, *S. polymorpha*; 4, *S. multifida*, *luciniata*; 5, *S. rosea*; 6, *S. prismatica*; 7, *S. SAMPHIRE ROCK. See *Crithmum*.

SAMYDA, *Linn.* The Greek name of the Birch; applied to this genus because of its resemblance. *Linn.* 10, Or. 1, Nat. Or. *Samydacææ*. Ornamental plants, thriving well in a mixture of loam and peat; and cuttings root readily if planted in a pot of sand, under a glass, in a little heat. *Synonymes*: 1, *S. viridiflora*; 2, *S. pubescens*.

SAMYDACEÆ, or SAMYDS, are tropical trees and shrubs, with but little beauty. They are principally American, but a few belong to Asia and Africa.

SAN. See *Cryptomeria japonica*.

SANDAL-TREE. See *Sandoricum*.

SANDAL-WOOD. See *Santalum*.

SANDBOX-TREE. See *Hura*.

SAND-CHEERRY. See *Ephedra distachya*.

SANDERS-WOOD. See *Pterocarpus Santalinus*.

SAND-GRASSES and SEDGES. See *Carex arenaria*.

SANDORICUM, *Cavanilles*. From *santoor*, the Malay name of the tree. *Linn.* 10, Or. 1, Nat. Or. *Meliacææ*. This tree thrives well in a mixture of loam, peat, and sand; and ripened cuttings root in sand, under a glass, in heat.
indicum . White . . S. Ev. T. 50 E. Indies . 1820

SANDRACH TREE. See *Thaia articulata*.

SAND-WOOD. See *Bremontiera Annabxylon*.

SANDWORT. See *Arenaria*.

SANGUINARIA, *Linn.* From *sanguis*, blood; all the parts of the plant yield a red juice when cut or broken. *Linn.* 13, Or. 1, Nat. Or. *Papaveracææ*. Dwarf plants, serving well to ornament the front of the flower-border, in a light sandy loam or peat soil; and they are readily increased by dividing the roots, or by seeds.

canadensis . White . 3, H. Tu. P. 2 N. Amer. 1680
grandiflora . White . 5, H. Tu. P. 2 N. Amer.

SANGUISORBA, *Linn.* From *sanguis*, blood, and *serbeo*, to absorb; *S. officinalis* was formerly supposed to be a powerful vulnerary. *Linn.* 4, Or. 1, Nat. Or. *Sanguisorbacææ*. All the species of *Burnet* are of the easiest culture in any common soil; and are readily increased by divisions of the roots, or by seeds. *Synonyme*: 1, *S. rubra*.

alpina . . . Yellow 6, H. Her. P. 3 Altai . 1837

tenuifolia . Pink . 7, H. Her. P. 4 Dahuria 1820

SANGUISORBA. See *Poterium Sanguisorba*.

SANGUISORBACEÆ, or SANGUISORBES. Herbaceous plants and small under-shrubs, natives of hedge-banks, heaths, and other exposed places, in various parts of the world; formerly they were united with *Rosacææ*. The common *Burnet* (*Sanguisorba officinalis*) and the Lady's Mantle (*Alchemilla vulgaris*) are examples.

SANICLE. See *Sanicula*.

SANÍCULA, *Tournefort*. From *sano*, to heal; supposed healing effects of *Sanicula europæa*. *Linn.* 5, Or. 2, Nat. Or. *Apiacææ*. Mere weeds, multiplied by divisions of the roots—*canadensis*, *europæa*, *marilandica*.

SANSEVIERA, *Thunberg*. In honour of M. Sansevier, a Swedish botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliacææ*. Interesting plants, growing well in sandy loam; and increasing by suckers. The stove species should be very sparingly watered when dormant. *Synonyme*: 1, *S. sessiliflora*. See *Cordyline*.

SANTALACEÆ, or SANDAL-WORTS. A small order, consisting principally of shrubs and small trees. *Santalum album* produces sandal-wood, which, besides its variegated beauty, is esteemed for its perfume and medicinal properties.

SANTALUM, *Linn.* From its Persian name, *sandil*, signifying useful. *Linn.* 4, Or. 1, Nat. Or. *Santalacææ*. A mixture of loam and peat suits these interesting plants; and cuttings will root in sand, under a glass, in heat. Saunders-wood is the produce of *S. album*, and in India it is considered sedative and cooling; it is also esteemed as a perfume.

SANTOLINA. See *Achillea Santolina*.

SAP-GREEN. See *Artemisia Santonica*.

SANVITALIA, *Cavanilles*. Derivation unknown; probably a man's name. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An interesting genus, requiring the same treatment as other half-hardy annuals.

mexicana . . . Orange	7, H. Tr. A. 1 Mexico	
procumbens . . . Yellow	7, H. Tr. A. 1 Mexico	1798

SAQUARI, or SUWARROW, NUT. See *Caryocar*. SAP-GREEN is obtained from the berries of *Rhamnus catharticus*.

SAPID, agreeable to the taste.

SAPINDACEÆ, or SOAP-WORTS. This order is composed of a great variety of species. One general character is that the embryo is either much curved or spirally twisted; this is particularly remarkable in the Snake-nut (*Ophiocaryon*). Several kinds bear eatable fruit, highly esteemed in the countries where they grow; of these may be mentioned the *Lee-chee*, *Longan*, *Rambootan*, *Honey-berries*, *Akee*, and many others quite as good as those named.

SAPINDUS, *Linn.* Altered from *Sapo-indicus*, Indian-soap; the aril which surrounds the seed of *S. saponaria* is used as soap in S. America. *Linn.* 8, Or. 3, Nat. Or. *Sapindaceæ*. These plants are hardly worth growing, except in general collections. They thrive in a mixture of loam, peat, and sand; and large cuttings will root in sand, under a glass, in heat. According to Browne, the seed-vessels are very acid; they lather freely in water, and will cleanse more linen than thirty times their weight of soap, but in time they corrode or burn the linen. *Synonyme*: 1, *Moultinsia rubiginosa*.

arborescens . . . Wht. grn.	8, S. Ev. S. 20 Guiana	1824
emarginatus . . . Wht. grn.	7, S. Ev. T. 10 E. Indies	1822

senegalensis . . . Wht. grn.	7, S. Ev. T. 20 Senegal	1823

SAPIDUM, *Jacquim*. From *sap*, Celtic, signifying fat; in allusion to the unctuous exudation from the wounded trunk. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. These trees thrive well in loam and peat; and cuttings will root in sand, under a glass, in heat. The juice of

S. aucuparium is said to be poisonous. *Synonyme*: 1, *Hippomane spinosa*.

aucuparium . . . Green	6, S. Ev. T. 25 W. Indies	1692
Hippomane . . . Grn. wt.	6, S. Ev. T. 20 Guiana	1822
ilicifolium . . . Green	5, S. Ev. T. 20 S. Amer.	1820
indicum . . . Grn. wt.	5, S. Ev. T. 25 E. Indies	1818

SAPONACEOUS, soapy.

SAPONARIA, *Linn.* From *sapo*, soap; the bruised leaves are said to produce a lather, like soap, when agitated in the water. *Linn.* 10, Or. 2, Nat. Or. *Caryophyllaceæ*. This genus contains some truly beautiful plants, well deserving of a place in every garden. *S. ocymoides*, from its trailing habit, and handsome flowers, is well adapted for rock-work. A mixture of sandy loam and peat suits them best, and they are readily increased by division at the roots or by seed; young cuttings of the branching species will also root readily if planted under a glass. The leaves of *S. officinalis* form a lather, which much resembles that of soap, and is similarly efficacious in removing grease spots.

SAPOTA. See *Achras Sapota*.

SAPOTACEÆ, or SAPOTA PLUMS. A group of handsome trees and shrubs, some attaining a considerable height. Many bear excellent fruit, as the *Sapota-plum* and *Sappodilla*, which are species of *Achras*; the Star-apples (*Chrysophyllum*), the Marmalade (*Achras mammosa*), and the Bully-tree (*Mimosa*).

SAPPAN-WOOD. See *Cassalpinia Sappan*.

SAPPODILLA. See *Achras Zapotilla*.

SARACA. See *Jonesia*.

SARACEN CORN. See *Polygonum Fagopyrum*.

SARACHA, *Ruiz and Pavon*. In honour of Isidore Saracha, a Benedictine monk, much attached to botany, and who enriched the royal gardens at Madrid with many rare plants. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. These plants will grow well in any common garden soil. *S. viscosa* is easily increased by cuttings. The seeds of the annual species should be sown in the open border in spring.

procumbens . . . Cream	6, H. Tr. A.	1 1/2 Peru	1822
umbellata . . . Pa. yel.	6, H. Tr. A.	1 1/2 Peru	1822

SARCANTHUS, *Lindley*. From *sarc*, flesh, and *anthos*, a flower; in allusion to the fleshiness of the flowers. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The plants of this genus are highly deserving of cultivation. They require to be grown in a hot damp atmosphere,

and treated the same as *Vanda*. See *Saccolabium*.

SARCOCAPNOS, *De Candolle*. From *sarz*, flesh, and *capnos*, the Greek name for fumitory; in allusion to the fleshy leaves. *Linn.* 17, Or. 2, Nat. Or. *Fumariaceæ*. This plant thrives well in the open border or on rock-work, and is easily increased by seeds or cuttings. *Synonymes*: 1, *Fumaria enneaphylla*.
enneaphylla 1. Pa. yel. 6, H. Her. P. 1 Spain . 1714

SARCOCARP, the most fleshy part of fruit, under the pericarp.

SARCOCAULON, *De Candolle*. From *sarz*, flesh, and *caulos*, a stem; fleshy stems. *Linn.* 16, Or. 7, Nat. Or. *Geraniaceæ*. Ornamental under-shrubs, growing best in a mixture of loam, peat, and leaf-mould or sand; they are readily increased by planting young cuttings in sand, under a glass, or by cuttings of the root. *Synonymes*: 1, *Geranium spinosum*; 2, *Monsônia spinosa*.

Burmänni 1 . . . Purple . . . 5, S. Ev. S. 1	C. G. H. 1800

Fatersoni . . . Purple . . . 5, S. Ev. S. 2	C. G. H. 1827

SARCOCÉPHALUS, *Azelius*. From *sarz*, flesh, and *cephale*, a head; in allusion to the fruit being combined into a fleshy head. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. This interesting plant is seldom seen in collections. It requires to be grown in a mixture of loam, peat, and sand, and kept in a hot part of the house. Cuttings will root in sand, under a glass, in heat. The heads of the fruit are eatable, and are much sought after by the negroes.

esculentus . . . Pink . . . 7, S. Ev. T. 20	S. Leone . 1822
---	-----------------

SARCOCHILUS, *R. Brown*. From *sarz*, flesh, and *cheilos*, a lip; in allusion to the fleshy lip. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus of rather interesting plants. For culture, &c., see *Burlingtonia*.

SARMENTOSE, producing runners, or trailing offsets.

SAROTHRA, *Willd.* From *sarothron*, a besom; plants have that appearance. *Linn.* 5, Or. 3, Nat. Or. *Hypericaceæ*. A hardy plant, growing in any light soil, and readily increased by seeds.

gentianoides . . . Yellow . . . 7, H. . . A. 1	N. Amer. 1768
--	---------------

SARRACÉNIA, *Linn.* In honour of Dr. Sarrasin, a French physician. *Linn.* 13, Or. 1, Nat. Or. *Sarraceniacæ*. These curious and interesting plants grow well in pots partly filled with rough peat soil, and the rest sphagnum moss. They should be kept in a moderately cool house and a moist close atmosphere; the mode of propagation is by division. *Synonymes*: 1, *S. adunca*.

SAURURÆÆ, or SAURURADS. A small group

of herbaceous plants: they are natives of North America, China, and the North of India, and possess but little beauty.

SAURÛRUS, Linn. From *saura*, a lizard, and *oura*, a tail; in allusion to the appearance of the flower-spike. *Linn.* 7, Or. 3, Nat. Or. *Saururææ*. These plants should be grown in sandy loam, in a pond or cistern; they are readily increased by divisions or seeds.

SAXE-GOTHEÆ, Lindl. In honour of the late Prince Consort. *Linn.* 21, Or. 8, Nat. Or. *Pinaceæ*. These are evergreen trees, resembling the Yew, and requiring precisely the same treatment.

conspicua. . . Apetal 6, H. Ev. T. 30 Patagonia. . 1846

SAXÍFRAGA, Linn. From *saxum*, a stone, and *frango*, to break; its reputed medical qualities

in that disease. *Linn.* 10, Or. 2, Nat. Or. *Saxifragaceæ*. A very extensive genus of beautiful alpine plants, the greater part of which are particularly suitable for ornamenting rock-work, or for growing on the sides of naked banks. A light sandy soil is best for them; and they are all readily increased by seeds or divisions. Many of the more rare and tender kinds require the protection of a frame in winter, and should therefore be grown in pots. *Synonymes*: 1, *S. aquatica*; 2, *S. lævis*; 3, *S. grœnlândica*; 4, *S. palmata*; 5, *S. crenatâ*; 6, *S. dentatâ*; 7, *S. polita*; 8, *S. sphæroidea*; 9, *S. recta*; 10, *Megasea ciliatâ*; 11, *S. muscoides*; 12, *S. moschatâ*; 13, *S. congesta*; 14, *S. moschatâ*; 15, *Leptarrhœna pyrolæfolia*; 16, *S. cuscuteformis*; 17, *S. dissimilis*; 18, *S. punctatâ*; 19, *S. serratifolia*, *S. cymosa*, *S. heterophylla*.

SAXIFRAGACEÆ, or SAXIFRAGES, are herbaceous plants, for the most part well known. They are all natives of mountains in Europe and the northern parts of the world, being found near the regions of perpetual snow. Some are found on old walls and rocks, and in shady groves; but none are met with in the tropics.

SAXIFRAGE. See *Saxifraga*.

SAXIFRAGE. See *Pimpinella Saxifraga*.

SCABIOSA, Ramer. From *scabies*, the itch; the common kind is said to cure that disorder. *Linn.* 4, Or. 1, Nat. Or. *Dipsacaceæ*. Some of these plants are well adapted for ornamenting the flower-border. The herbaceous kinds are readily increased by division at the root,

or by seed. The seeds of the annual kinds merely require sowing in the open border. *Synonymes*: 1, *S. pseud-austrâlis*; 2, *S. nôrica*. See *Cephalària*, *Knaùtia*, and *Succisa*.

SCÂRIOLA. See *Lactuca Scariola*.

SCARIOSE, membranous, and dry.

SCARLET POMPONE. See *Lilium Pomponium*.

SCARLET-RUNNER BEANS. See *Phaseolus*.

SCELOCHILUS, *Klotzsch*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. An epiphyte, bearing short spikes of small yellow flowers. It thrives on a block of wood, in a cool temperature.

Ottônii . . . Pur. yel. 7, S. Epi. 1 Caraccas . . 1840

SCÊPÂCÊE, or SCÊPADS. An order nearly related to *Euphorbiaceæ*. The species are tropical trees, some of which grow to a considerable size.

SCÊPRÂNTHES, *Graham*. From *skeptron*, a sceptre, *anthos*, a flower. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. An ornamental plant, for the culture and propagation of which see *Zephyranthes*. *Synonyme*: 1, *Zephyranthes Drummondii*.

Drummondii 1 Wht. pink 7, F. Tu. P. 1 1/2 Texas . 1835

SCÊPTRUM-CAROLINUM. See *Pedicularis Scêptrum-Carolinum*.

SCHÆFFERIA, *Jacquin*. In honour of James Christian Schæffer, a German naturalist. *Linn.* 22, Or. 4, Nat. Or. *Celastraceæ*. This plant thrives well in a mixture of loam, peat, and sand; and half-ripened cuttings root freely in sand, under a glass, in heat. *Synonyme*: 1, *S. complèta*. See *Drypètes*.

frutescens 1 . White 8, S. Ev. S. 6 W. Indies . 1793

SCHAMBU. See *Jambosa vulgaris*.

SCHEDONORUS, *Ramer*. From *schodon*, near to, and *oros*, a mountain. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A genus of perennial grasses, growing in common soil; and increasing by seeds. *Synonymes*: 1, *Festuca calamaria*; 2, *F. decudua*; 3, *F. elatior*; 4, *Bromus inermis*; 5, *Festuca loliacea*; 6, *F. nigræscens*; 7, *F. nitans*; 8, *F. poæformis*; 9, *pratensis*; 10, *F. Scheuchzeri*; 11, *F. spadicæa*; 12, *F. sylvatica*; 13, *F. tenella*, *Brachypodium festucoides*; 14, *F. violacea*.

decidua 2	Apetal	6, Grass. 1 1/2	Britain, pastures.	
elatior 3	Apetal	6, Grass. 3	Britain, pastures.	
loliaceus 5	Apetal	6, Grass. 1 1/2	Britain, pastures.	
nigræscens 6	Apetal	6, Grass. 1	Switzerland	1819
phœnicoides	Apetal	7, Grass. 1	Switzerland	1819
poæformis 8	Apetal	6, Grass. 1	Switzerland	1819
pratensis 9	Apetal	6, Grass. 1 1/2	Britain, pastures.	
spadicæus 11	Apetal	4, Grass. 1 1/2	Italy	1775
sylvaticus 12	Apetal	7, Grass. 2	Germany	1804

calamarius 1, *cerulæscens*, *inermis* 4, *nitidus*, *nitans* 7, *pumilus*, *Scheuchzeri* 10, *tenellus* 13, *violaceus* 14.

SCHELHÂMNERA, *R. Brown*. In honour of C. C. Schellhammer, professor at Jena. *Linn.* 6, Or. 1, Nat. Or. *Melanthaceæ*. A mixture of peat and loam suits these pretty flowering plants best; and they are easily increased by divisions. They succeed well in a warm border, but require the protection of the greenhouse in winter.

multiflora	Purple	6, G. Her. P. 1 1/2	N. Holl.	1824
undulata	Purple	6, G. Her. P. 1 1/2	N. Holl.	1824

SCHELLÔLEPIS, *J. Smith*. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*, *Synonymes*: 1, *Goniophleb*.

bium amœnum; 2, *G. verrucosum*. Stove ferns.

SCHISANTHES. See *Narcissus*.

SCHISMUS, *Beauvois*. From *schisme*, a cleft; alluding to the outer palea. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. An annual species of grass, of no interest. *Synonyme*: 1, *Festuca calycina*—*marginatus* 1.

SCHISTOSTEGA. From *schistos*, split, and *stega*, a covering; the lid is split at the margin. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. This species is found on banks. *Synonyme*: 1, *Gymnostomum pennatum*—*pennata* 1.

SCHIVERECKIA, *Andrejzowski*. In honour of Andr. Schivereck, a Russian botanist. *Linn.* 15, Nat. Or. *Brassicaceæ*. This species will thrive in common garden soil; and is readily increased by divisions. *Synonyme*: 1, *Algisum podolicum*.

podolica . . Yellow 6, H. Her. P. 1 Podolia . . 1821

SCHIZACÆNA, *J. Smith*. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove fern.

Brundënis . Brn. yel. 4, S. Her. 1 Malacca . .

SCHIZÆA, *Suartz*. From *schizo*, to cleave; appearance of the fan-like spikes. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. A genus of ornamental ferns. For culture and propagation, see *Davallia*.

SCHIZANDRA, *Michaux*. From *schizo*, to cleave, and *aner*, a man; the stamens are split. *Linn.* 21, Or. 5, Nat. Or. *Schizandraceæ*. An ornamental plant, thriving in a mixture of sandy loam and peat; ripened cuttings root readily in sand, under a glass.

coccinea . . Scarlet 6, G. Ev. Tr. 1 N. Amer. . 1806

SCHIZANDRACEÆ, or **KADSURADS**. These are scrambling shrubs, not without beauty. They are natives of the hotter parts of the world, and their products are useful for domestic purposes.

SCHIZANTHES. See *Narcissus*.

SCHIZANTHUS, *Ruiz and Pavon*. From *schizo*,

to cut, and *anthos*, a flower; in allusion to the irregularly divided corolla. *Linn.* 2, Or. 1, Nat. Or. *Scrophulariaceæ*. This is a genus of extremely beautiful and showy annuals. A light fresh soil, not too rich, appears to suit these plants best. They succeed well if the seed be sown in an open border early in spring; they may also be reared on a hot-bed in spring, planting a portion in the open border, and growing the remainder in pots in the greenhouse, with a free admission of air and light. To procure flowering plants early in summer, the seed should be sown in pots during the autumn, and the plants kept in a frame or greenhouse throughout the winter.

SCHIZODIUM. See *Disa*.

SCHIZOGYNE. See *Cynura sericea*.

SCHIZOLOMA, *Guadichaud*. From *schizo*, to cut, and *loma*, an edge; fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove ferns. *Synonymes*: 1, *Lindsaea ensifolia*; 2, *L. heterophylla*.

ensifolia 1 . Brn. yel. 5, S. Her. P. 1 Malacca.
heterophylla 2 Brn. yel. 5, S. Her. P. 1 I. of Luzon.

SCHIZOMERIA, *D. Don*. From *schizo*, to cut, and *meris*, a part; alluding to the cut petals. *Linn.* 10, Or. 2, Nat. Or. *Arabiaceæ*. An ornamental shrub, succeeding in loam and sandy peat, and increasing by cuttings.

ovata . . White 6, G. Ev. S. 2 N. Holland . . 1825

SCHIZONEMA, *Agardh*. From *schizo*, to divide, and *nema*, a filament. *Linn.* 24, Or. 7, Nat. Or. *Diatomaceæ*. These plants are found upon the sea-coast, and in lakes—*lactistre*, *Smithii*.

SCHIZONOTUS, *Lindley*. From *schizo*, to cut, and *notos*, the back. *Linn.* 12, Or. 4, Nat. Or. *Rosaceæ*. A hardy shrub, from the northern provinces of India. For culture, &c., see *Spiræa*.

tomentosa . White 7, H. De. S. 8 India . . 1840

SCHIZOPETALON, *Sims*. From *schizo*, to cut, and *petalon*, a petal; the petals are cut. *Linn.* 15, Nat. Or. *Brassicaceæ*. This very singular plant should be raised in pots in the greenhouse during spring, and when of sufficient size, some of the seedlings may be planted out in the open border; others may be kept in pots in an airy part of the house, where they will sparingly produce seeds. A mixture of loam, peat, and sand suits it best.

Walkerii . . White 6, F. . A. 2 Chile . . 1822

SCHIZOPHYLLUM, *Fries*. From *schizo*, to cut, and *phyllon*, a leaf; in allusion to the appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. Found upon the trunks of trees—*commune*.

SCHIZOPLEURA. See *Beaufortia*.

SCHIZOSTOMA. See *Oxyptalum*.

SCHKÜRIA, *Roth*. In honour of Christian Schkuhr, a German botanist. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A Mexican annual of no interest—*abrotanoides*.

SCHLIMMIA, *Planchon*. In honour of M. Schlimm, its discoverer. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. An epiphyte resembling *Cypripedium*. Treat the same as *Epidendrum*.
jasminodora . White 6, S. Epi. 1 C. Amer. . . 1852

SCHMIDELIA, *Linn.* In honour of C. C. Schmidel, a professor of botany at Erlangen. *Linn.* 8, Or. 1, Nat. Or. *Sapindaceæ*. Ornamental plants, thriving in a mixture of loam and peat; cuttings of the ripened wood will root readily in sand, under a glass, in heat. *Synonymes*: 1, *Ornithopoe Cominia*; 2, *O. serrata*.

SCHËPFIA, *De Candolle*. In honour of John Schœpf, a German botanist. *Linn.* 5, Or. 1, Nat. Or. *Olacaceæ*. A tree-like plant, growing from ten to fifteen feet high, growing freely in a mixture of peat, loam, and sand; and cuttings strike root if planted in sand, under a hand-glass, in heat.
fragrans . . Yellow 6, G. Ev. S. 15 Nepaul . 1827

SCHÖLLERA. See *Leptanthus*.

SCHOMBURGKIA, *Linkley*. In honour of Sir Robert H. Schomburgk, a zealous naturalist, and a traveller in British Guiana on account of the Royal Geographical Society. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. *S. marginata*, and another species recently introduced, were originally discovered by the gentleman to whom the genus is dedicated. *S. marginata* is at present supposed to be rather difficult of culture. It will not grow so as to flower if kept in a pot, but thrives perfectly well when attached to a piece of wood, with a little moss on its roots. It must be kept in a hot, moist

part of the house. "In its native state, its flower-stalk is frequently four feet high, branching, and covered with flowers. During the dry season, it will bear intense heat without injury." *Synonymes*: 1, *Epidendrum tibicinis*.

SCHOÛWIA, *De Candolle*. In honour of J. F. Schouw, a celebrated Danish botanist. *Linn.* 15, Or. 1, Nat. Or. *Brassicaceæ*. The seeds of this pretty annual will only require to be sown in the open ground, in a light sandy soil.
arabica . . Purple 6, H. A. 1 Arabia . 1837

SCHRÁDERA, *Vahl*. In honour of Henry A. D. Schrader, a German botanist. *Linn.* 6, Or. 1, Nat. Or. *Cinchonaceæ*. This plant grows well in a mixture of loam, peat, and sand; and cuttings root in sand, under a glass, in heat.
cephalotes . . Red 7, S. Ev. Cl. 4 Jamaica . . 1820

SCHRÁNKIA, *Willdenow*. In honour of Francis Paula von Schrank, a famous German botanist, and author of many botanical works. *Linn.* 23, Or. 1, Nat. Or. *Fabaceæ*. These plants are very interesting on account of their leaves, which, like those of the sensitive plant, fall at the slightest touch. A mixture of loam, peat, and sand, is best adapted to them; and they may be increased by young cuttings, planted in sand, under a glass, in heat, or by separating the tubers of the roots.

SCIRPUS, Beauvois. From the Celtic *cirs*, rushes.

Linn. 3, Or. 1, Nat. Or. *Cyperaceæ*. Rushes, generally found in bogs. *Synonymes*: 1, *Schœnus compressus*; 2, *Schœnus rufus*—articulatus, atrovirens, cespitosus, caricinus 1, carinatus, elongatus, glaucus, lacustris, Luzula, maritimus, mucronatus, pauciflorus, quinqueangularis, radicans, rufus 2, sylvaticus, triqueter. See *Eleocharis* and *Isoplepis*.

SCLÆREA. See *Salvia Sclærea*.

SCLERANTHACEÆ, or **SCLERANTHS**, consist of small inconspicuous weeds, not worthy of cultivation.

SCLERANTHUS, Linn. From *scleros*, hard, and *anthos*, a flower; in allusion to the dry juiceless calyx. Linn. 10, Or. 2, Nat. Or. *Scleranthaceæ*. Mere weeds, not worth cultivating—*annuus*, *perennis*, *pungens*.

SCLERIA, Willdenow. Meaning unknown. Linn. 2, Or. 3, Nat. Or. *Cyperaceæ*. For culture, see *Cyperus*.

 latifolia . Yellow 7, S. Her. P. 1 W. Indies 1824
 verticillata . Green 6, H. Her. P. 1 N. Amer. 1825

SCLEROCARPUS, *Jacquin*. From *scleros*, hard, and *karpós*, a fruit; in reference to the hard covering of the grains. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. A plant of very little beauty. It grows in any soil.

africanus . Yellow 7, G. A. 2 Guinea . . 1812

SCLERÓCHLOA, *Beauvois*. From *scleros*, hard, and *chloa*, grass. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. Worthless annuals. *Synonymes*: 1, *Triticum maritimum*, *Festuca maritima*; 2, *Poa procumbens*; 3, *P. rigida*, *Megastachya rigida*—articulata, dichotoma 1, divaricata, dura, procumbens 2, rigida 3.

SCLERODERMA, *Persoon*. From *scleros*, hard, and *derma*, a skin; the hard coat. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. Found in plantations, about oak roots, &c. *Synonyme*: 1, *Tuber solidum*—Cæpa 1, citrinum, spadiceum, verrucosum.

SCLERÓLEPIS, *De Candolle*. See *Sparganophorus verticillatus*.

SCLERON, *Lindley*. From *scleros*, hard, and *oon*, an egg or seed. *Linn.* 14, Or. 2, Nat. Or. *Verbenææ*. This is a little Mexican plant, bearing some resemblance to an olive, with the flowers of a Verbena and the name of Daphne. Mr. Hartweg found it in fruit only, and sent it to the Horticultural Society's garden, where it has flowered, and proved itself to be a new genus of *Verbenææ*. See *Daphne*, for culture and propagation.

oleum . Grn. wht. 5, G. Ev. S. 1 Mexico . . 1843

SCLEROSCIADIUM, *De Candolle*. From *scleros*, hard, and *skiadion*, an umbel. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. An annual of the easiest culture.

humile . . White 6, H. A. 1½ Teneriffe . 1787

SCLEROTHAMNUS, *R. Brown*. From *scleros*, hard, and *thamnos*, a shrub; rigid plants, with stiff leaves. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. A very ornamental shrub. For culture and propagation, see *Dillwynia*.

microphyllus . Yellow 5, G. Ev. S. 2. N. Holl. 1803

SCLEROTIUM, *Tode*. From *sclerotes*, hardness; in allusion to the texture of the plants. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. These species are found on various kinds of decayed leaves. *Synonyme*: 1, *S. quercinum*—bullatum, durum, fructum, fungorum, herbærum, medullare, muscorum, neglectum, populinum, quercigenum 1, Rubi, salicinum, scutellatum, semen, s. Brassicæ.

SCLERÓXYLON. See *Myrsine*.

SCOLLOPED, having deep and wide indentations.

SCOLOPENDRIUM, *Smith*. From *scolopendra*, a centipede; in allusion to the appearance of the underside of the fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Interesting ferns, growing well on rock-work; they also succeed in shady situations, where hardly any other plants will live. They are readily increased by seeds or divisions of the roots. Important

medical qualities are ascribed to several of the species. *Synonymes*: 1, *S. palmatum*, *Asplenium hemionitis*; 2, *A. scolopendrium*; 3, *Onychium Krebsii*.

SCOLOPENDRIUM. See *Bosidia Scolopendrium*.

SCOLYMUS, *Linn*. From *skolos*, a thorn; the plants are spiny. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. These plants succeed well in common garden soil; the perennial kinds are readily increased by divisions or seeds. The seeds of *S. maculatus* need only be sown in the open ground. The roots of *S. hispanicus* are equally as good as *Scorzonera*; the leaves and stalks are eaten as Cardoons by the people of Salamanca: the flowers are used for adulterating saffron.

grandiflorus . Yellow 5, H. Her. P. 3 Barbary . 1828
 hispanicus . Yellow 8, H. Her. P. 3 S. Eur. . 1653
 maculatus . Yellow 7, H. A. 3 S. Eur. . 1630

SCOLYMUS. See *Cynara Scolymus* and *Prætea Scolymus*.

SCOPARIA, *Linn*. From *scopa*, a broom; it may be used for similar purposes. *Linn.* 4, Or. 1, Nat. Or. *Scrophulariaceæ*. *S. dulcis* requires the same treatment as other stove annuals. According to Browne, it is an excellent vulnerary.

dulcis . . . White 7, S. A. 3 Jamaica . 1730
 flava . . . Yellow 6, S. Her. P. 3 Brazil . . 1829

SCOPOLIA, *Jacquin*. In honour of John Anthony Scopoli, a celebrated professor, and author of some botanical works. *Linn.* 5, Or. 1, Nat. Or. *Solanææ*. This is a very desirable plant, on account of its producing its pretty flowers early in spring. It thrives best in a light dry soil, and a shady situation. It may be increased by dividing the roots. *Synonymes*: 1, *S. atropoides*, *Hyoscyamus Scopolia*. See *Toddalia*.

SCORPIUS. See *Génista Scörpius*.

SCORZONERA, *Linn.* From *scurzon*, the Catalonian name of the viper; in Spain the plants are considered a certain remedy for the bite of the viper. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. These plants require the same treatment as carrots. *S. hispánica* is diuretic, stimulant, and sudorific. The root resembles a carrot, and is about the thickness of a man's finger; when the outer rind has been scraped off, it is steeped in water to extract part of its bitter flavour; then boiled or stewed the same as carrots or parsneps. The roots are fit for use from August till the following spring. *Synonymes*: 1, *S. graminifolia*; 2, *S. austriaca*; 3, *S. undulata*; 4, *S. subulata*; 5, *S. villosa*; 6, *S. serrulata*. See *Podospermum*.

SCURFY, covered with scales, resembling scurf.

SCURVY GRASS. See *Cochlearia*.

SCUTATE, shaped like an ancient round buckler.

SCUTELLARIA, *Linn.* From *scutella*, a little saucer; alluding to the form of the calyx. *Linn.* 14, Or. 2, Nat. Or. *Lamiaceæ*. From the plants being for the most part very handsome when in flower, they are well suited for ornamenting the front of the flower-border. They grow in any common garden soil, and increase readily by seeds and divisions; the shrubby species may be readily multiplied by young cuttings. The greenhouse and frame species require protection only in winter. *Synonymes*: 1, *S. nigrescens, pallida*; 2, *S. alluaudi*; 3, *S. lupulina*; 4, *S. decembris*; 5, *S. Caroliniæna, hyssopifolia*; 6, *S. ambigua*; 7, *S. rubicunda*. See *Teucrium*.

vulbilis . . . White 7, S. Ev. Tw. 10 W. Indies. 1739

SECURIGERA, *Decandolle*. From *securis*, a
hatchet, and *gero*, to bear ; in reference to the
shape of the pods. *Linn.* 17, Or. 4, Nat. Or.
Fabaceæ. The seeds have only to be sown in
the open border in spring. *Synonymes* : 1,
Securidaca lutea, *Coronilla securidaca*.
Coronilla 1 . Yellow . 7, H. A. 1 S. Eur. 1562

SECURINEGA, *Jussieu*. From *securis*, a hatchet,
and *nego*, to refuse ; because of the extreme
hardness of the wood. *Linn.* 21, Or. 5, Nat.
Or. *Euphorbiaceæ*. These plants succeed well
in a mixture of peat and loam ; and cuttings
of the half-ripened wood root readily in sand,
under a glass, in heat.

Commerstoni White . 6, S. Ev. T. 35 . . . 1815
nitida . . . White . 6, S. Ev. T. 35 Mauritius 1793

SEDGE. See *Carex*.

SEDUM, *Linn.* From *sedere*, to sit ; the plants
are found growing upon stones, rocks, walls,
and roofs of houses. *Linn.* 10, Or. 4, Nat. Or.
Crassulaceæ. The hardy species of this inter-
esting succulent genus are admirably suited
for ornamenting rock-work. Some of the
rarer kinds may be grown in small pots, in
light sandy soil, or in loam mixed with brick
rubbish. They are readily increased by divi-
sions or cuttings. The greenhouse kinds re-
quire the same treatment as the *Globulæ*.
The annual kinds also succeed best on rock-
work, where the seed has merely to be sown.
Synonymes : 1, *Rhodiola sibirica* ; 2, *Sedum
fruticulosum*, *Jacquini*, *Sempervivum sedi-
forme* ; 3, *Sedum glaucum* ; 4, *S. rupestre* ;

SEED LAC is the produce of *Butea frondosa*.

SEED OF THE SUN. See *Armeniacæ*.

SEGETALIS. See *Alysine segetalis*.

SEGMENT, a part of anything.

SELAGINACEÆ, or SELAGIDS. A small group of

herbaceous plants, chiefly natives of Africa, and nearly related to Verbenas. Some are pretty, and well deserve cultivation.

SELAGINELLA. See *Lycopodium*.

SELAGO. *Linn.* From the Celtic, *sel*, sight, and *jach*, salutary; supposed medicinal qualities. *Linn.* 14, Or. 2, Nat. Or. *Selaginaceae*. A genus of very pretty plants, of easy culture; a mixture of loam, peat, and sand suits them; and cuttings root freely in sand or soil, under a glass. *Synonymes*: 1, *S. lucida*; 2, *S. teretifolia*; 3, *fálvo-maculata*; 4, *S. diffusa*.

SELLÖA. *Humboldt and Bonpland.* In honour of Mr. Sello, a German botanist. *Linn.* 19, Nat. Or. *Asteraceae*. A worthless stove perennial; increased by cuttings—*glutindsa*. See *Gymnosperma*.

SEMECÁRPUS. *Linn.* From *semeion*, a mark, and *karpós*, a fruit; the black, acrid juice of the nut is used by the natives for marking cotton cloths. *Linn.* 23, Or. 2, Nat. Or. *Anacardiaceae*. For the culture and propagation of this lofty-growing tree, see *Anacardium*. *Synonyme*: 1, *Anacardium longifolium*, *Cassivum*.

Anacardium 1 Grn. yel. 5, S. Ev. T. 20 E. Indies 1824
cuneifolium Grn. yel. 5, S. Ev. T. 20 E. Indies 1820

SEMI. half.

SEMINAL, belonging to the seed.

SEMPERVIVUM. *Linn.* From *semper vivo*, to live for ever; the tenacity of life of the House-leek is well known. *Linn.* 11, Or. 7, Nat. Or. *Crassulaceae*. These interesting plants are worthy of a place in every collection. The greenhouse species succeed best in a mixture of sandy loam and brick rubbish; and when not in flower, they must be very sparingly watered. Cuttings taken off, and laid to dry for two or three days, will root very freely. The readiest way of obtaining cuttings from *S. tabuleforme* and some others, is to cut the top out, when lateral shoots will be immediately produced. The hardy kinds succeed best on walls or rock-work, and are easily increased by offsets. The juice of the common house-leek, *S. tectorum*, applied either by itself or mixed with cream, gives immediate relief in burns, and other external inflammations. *Synonymes*: 1, *Sedum divaricatum*; 2, *Sempervivum calyciforme*; 3, *S. lincolare*; 4, *S. barbátum*, *ciliatum*; 5, *S. laxum*; 6, *S. grandiflorum*; 7, *S. soboliferum*; 8, *S. villosum*. See *Ædonium*.

SENËCIO, *Linn.* From *senex*, an old man; the receptacle is naked, and resembles a bald head. *Linn.* 19, Or. 2, Nat. Or. *Asterææ*. An extensive genus of plants, many of the species of which are very ornamental. The shrubby kinds grow well in any light soil, and increase freely by cuttings. The hardy species will thrive in common garden soil, and may be increased by dividing the plants. The annuals and biennials are also of the easiest culture. *Synonymes*: 1, *Cinerària alpina*; 2, *S. cinerarioides*; 3, *Cacàlia sarracénica*; 4, *S. incanus*; 5, *Cinerària cordifolia*; 6, *Cinerària cruenta*; 7, *S. aquaticus*; 8, *S. glutinosus*; 9, *S. incanus*; 10, *S. canescens*; 11, *Cinerària alpina*, var.; 12, *S. paradoxus*; 13, *S. lanceus*; 14, *Cacàlia pinnata*; 15, *C. peucedanifolia*; 16, *S. SERSALISIA, *R. Brown*. In memory of John Baptiste Sersalis, a Neapolitan ecclesiastic, much praised by Fabius Columna. *Linn.* 5, Or. 1, Nat. Or. *Sapotaceae*. This shrub thrives best in a mixture of loam, peat, and sand; and cuttings root freely in sand, under a glass. *Synonyme*: 1, *Sideroxylon sericeum*.

sericea . . . White 6, S. Ev. S. 6 N. Holland . 1772

SERVICE. See *Pyrus Sôrbus*.

SESAMUM, *Linnæus*. From *sempsen*, the Egyptian name of one of the species. *Linn.* 14, Or. 2, Nat. Or. *Pedaliaceae*. Only worth growing as botanical curiosities. They require the same treatment as other tender annuals. The seeds contain an abundance of oil, which

might be substituted for olive oil; it is procured from them in Egypt in great quantities.

indicum	Pa pur 7, S.	A. 1 $\frac{1}{2}$ E. Ind. 1781
luteum	Yellow 7, S.	A. 1 $\frac{1}{2}$ E. Ind. 1825

SÉSSEL, *Linn.* The Greek name of an umbelliferous plant. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. The species of Meadow-saxifrage are of very little interest. A sandy or chalky soil suits them, and they are readily increased by seeds. *Synonymes*: 1, *Bubon siculum*; 2, *S. Athamántia*, *Bubon buchtornense*; 3, *S. annuum*; 4, *B. dichotomum*; 5, *Athamántia Libanotis*; 6, *S. glaucum*; 7, *S. crassifolium*; 8, *S. proliferum*; 9, *B. rigidum*; 10, *S. tauricum*—Boccóni 1, buchtornense 2, campestre, cervariaefolium, cherophyloides, coloratum 3, dichotomum 4, divaricatum, elatum, fragile, græcile, gummiferum, Hippomarathrum, leucospermum, Libanotis 5, Lobelianum, montanum, m. glaucum 6, Pallásii 7, peucedanifolium 8, rigidum 9, striatum, strictum, tortuosum, triternatum, varium 10. See *Bubon*, *Ptychotis*, and *Selinum*.

SESLERIA, *Arduini*. In honour of M. Sesler, a physician and botanist of the eighteenth century. *Linn.* 3, Or. 2, Nat. Or. *Gramineae*. Uninteresting grasses. *Synonyme*: 1, *Cynosurus cæruleus*—cærulea 1, cylindrica, disticha, elongata, nitida, tenella, tenuifolia, sphaerocéphala. See *Echinaria*.

SESSILE, without stalks.

SESUVIUM, *Linn.* Not explained. *Linn.* 12, Or. 2, Nat. Or. *Tetragoniaceae*. These succulent plants require to be grown in sandy loam and peat. They increase freely by cuttings, dried a little, and planted in the same kind of soil, under a glass. They must be sparingly watered. *Synonymes*: 1, *S. pedunculatum*; 2, *S. sessile*, *S. Portulacastrum*.

revolutifolium	Rd. wt. 7, S. Her. P. 2	S. Amer.

SETACEOUS, shaped like a bristle.

SETÆ, bristles.

SETARIA, *Beauvois*. From *seta*, a bristle; the involucre is bristly. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. These grasses are of no interest. They are nearly all annuals—*aspera*, *auricoma*, *cenchroides*, *compōsita*, *cylindrica*, *erubescens*, *geniculata*, *germanica*, *glauca*, *hélvola*, *intermedia*, *italica*, *macrochæta*, *maritima*, *maricata*, *Pennisetum*, *polystachya*, *pumila*, *purpurascens*, *scandens*, *sericea*, *setosa*, *tenuissima*, *verticillata*, *viridis*, *Weinmanni*.

SETHIA, *Kunth*. In honour of S. Sethi, author of a work on culinary vegetables. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. This plant thrives well in turfy loam and peat, and cuttings will root in sand, under a glass, in a moist heat. *Synonyme*: 1, *Erythroxylon monogynum*.

indica . . Yellow 6, S. Ev. T. 40 E. Indies . 1824

SETIFORM, formed like bristles.

SETIGEROUS, bearing bristles.

SETOSE, covered with bristles.

SEVERINIA, *Tenore*. Meaning unknown. *Linn.* 18, Or. 4, Nat. Or. *Aurantaceæ*. For the culture of this desirable old greenhouse plant, see *Citrus*. *Synonyme*: 1, *Citrus buxifolia*.
buxifolia 1 . . White 5, G. Ev. S. 3 China . .

SEVILLE ORANGE. See *Citrus vulgaris*.

SEYMERIA, *Pursh*. In honour of Henry Seymour, an English naturalist. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. The seeds should be sown in a bed of peat soil. The plants are very pretty when in blossom, but rather difficult to cultivate. *Synonymes*: 1, *Azelia casoides*, *Gerardia Afzelia*.

pectinata . . Yellow 7, H. A. 1 N. Amer. 1820
tenuifolia 1 . Yellow 7, H. A. 1 N. Amer. 1730

SHARP CEDAR. See *Juniperus oxycedrus*.

SHAVE-GRASSES, or LEAFLESS FERNS. See *Equisetum*.

SHEATH, the lower part of the leaf that surrounds the stem.

SHE-OAK. See *Casuarina quadrivalvis*.

SHEEP-LAUREL. See *Kalmia angustifolia*.

SHEEP'S BEARD. See *Arnopogon*.

SHEEP'S SCABIOUS. See *Jasione*.

SHEEP'S SORREL. See *Rumex acetosella*.

SHELL-BARK HICKORY. See *Juglans sulcata*.

SHEPHERDIA, *Nuttall*. In honour of the late Mr. John Shepherd, curator of the Botanic Garden of Liverpool. *Linn.* 22, Or. 4, Nat. Or. *Elæagnaceæ*. Ornamental trees. For culture, &c., see *Hippophææ*. *Synonymes*: 1, *Hippophæa argentea*; 2, *H. canadensis*.
argentea 1 . . Apetal 4, H. De. T. 8 Missouri, 1820
canadensis 2 . Apetal 4, H. De. T. 8 N. Amer. . 1759

SHEPHERD'S BEARD. See *Arnopogon*.

SHEPHERD'S CLUB. See *Verbascum Thapsus*.

SHEPHERD'S PURSE. See *Capella*.

SHEPHERD'S PURSE. See *Thlaspi*.

SHERARDIA. Named by Dillenius in honour of his patron, William Sherard, LL.D., consul at Smyrna. *Linn.* 4, Or. 1, Nat. Or. *Galiaceæ*. Uninteresting plants. The seed has only to be sown in the open ground. *Synonyme*: 1, *Galium murale*—*arvensis*, *murale* 1.

SHERBOURNIA, *G. Don*. See *Gardenia Sherbourniana*.

SHERDS, fragments of pots, employed to drain the soil supplied to potted plants.

SHIELD, a broad table-like process in the flowers of *Stupelia*.

SHIELD FERN. See *Aspidium*.

SHINGLE-OAK. See *Quercus imbricata*.

SHOREVEED. See *Littorella*.

SHORTLY-ACUMINATED, having a short tapering point.

SHORTLY-BIFID, } slightly cleft at the apex
SHORTLY-TWO-CLEFT, } into two parts.

SHRUBBY TREFOIL. See *Ptelea*.

SHUTERIA, *Choisy*. Named in honour of Dr. Shuter, formerly a physician at Madras. This beautiful twiner may be raised from seeds on a hotbed in spring, and the young plants, when of a sufficient size, should be placed in separate pots, and trained to sticks. Unless a very warm sheltered situation can be found, they require to be placed in a stove or greenhouse to blossom and ripen their seeds. *Synonyme*: 1, *Ipomœa bicolor*.

bicolor 1 . . Yel. pur. 8, S. Ev. Tw. 10 E. Ind. 1812

SHUTTLECOCK. See *Periptera punicea*.

SIBBALDIA, *Linn.* In honour of Robert Sibbald, professor of physic at Edinburgh. *Linn.* 5, Or. 5, Nat. Or. *Rosaceæ*. Small alpine plants; succeeding best when grown in pots in a mixture of loam, peat, and sand, and increased by dividing the roots. *Synonymes*: 1, *Chamaerhodos erecta*; 2, *Chamaerhodos polygyna*.

erecta 1 . . Pink . 7, H. Her. P. 3 Siberia . 1806

SIDA, *Linn.* Theophrastus gave this name to an aquatic plant, supposed to be identical with *Althæa*. *Linn.* 16, Or. 8, Nat. Or. Malvaceæ. Mostly free-flowering plants, of no beauty, thriving in any rich soil; and increased by seeds, which they produce in abundance. The shrubby kinds may be increased by cuttings, placed in sand, under a glass. They are for the most part stove plants. *S. cordifolia*, mixed with rice, is used to alleviate the bloody flux. The bark of several of the species is so tenacious as to be manufactured into cordage. *Synonymes*: 1, *Abutilon Avicennæ*; 2, *A. acerifolium*; 3, *A. albidum*; 4, *A. americanum*; 5, *A. arborescens*; 6, *A. asiaticum*; 7, *A. auritum*; 8, *A. crispum*; 9, *Napæa dioica*; 10, *A. ferrugineum*; 11, *S. viscosa*; 12, *A. giganteum*; 13, *A. glaucum*; 14, *A. globiflorum*; 15, *A. hernandioides*; 16, *S. pilosa*, *A. hirtum*; 17, *A. incanum*; 18, *A. indicum*; 19, *A. SILÄUS, *Besser*. A name given to an umbelliferous plant by Pliny. *Linn.* 5, Or. 3, Nat. Or. *Apiaceæ*. Hardy herbaceous plants, of no interest; increased by divisions or seeds. *Synonymes*: 1, *Stum peucedanoides*; 2, *Ligusticum longifolium*; 3, *Peucedanum Siläus*, *Cnidium Siläus*; 4, *Pastinaca rigida*, *Stum rigidum*; 5, *S. Mathrioli* — *carvifolius* 1, *longifolius* 2, *pratensis*, *triflora* 3, *rigidus* 4, *tenuifolius* 5. See *Cnidium*.

SILENE, *Linn.* From *salon*, saliva; in allusion to the viscid moisture on the stalks of many of the species, by which the smaller kinds of flies are entrapped; hence, also, the English name of the genus, *Catchfly*. *Linn.* 10, Or. 3, Nat. Or. *Caryophyllaceæ*. Elegant flowering plants, succeeding best in a light, rich soil. The shrubby kinds are readily increased by young cuttings, planted in sand or soil, under a glass. The hardy herbaceous kinds may be planted in the open border; the dwarfier species thrive well on rock-work, but duplicates should be kept in small pots, as alpine, that they may be sheltered by a frame in winter. The seeds of the hardy annual and biennial kinds only have to be sown, about the beginning of April, where they are intended to remain. They may all be easily multiplied by seeds, and some of the herbaceous sorts by dividing the plants at the root in spring. *Synonymes*: 1, *S. conoidea*; 2, *S. hirsuta*; 3, *Cucubalus chloræfolius*.

SILER, *Scopol.* *Siler*, withy, from *salio*, to spring; alluding to the rapid growth of the plants. *Linn.* 5, Or. 1, Nat. Or. *Apiaceæ*. This species is quite worthless, and flourishes in the commonest soil. *Synonymes*: 1, *Laserpitium trilobum*, *Siler aquilegifolium*—*trilobum* 1. See *Agasyllis*, *Sison*, and *Laserpitium*.

SILICEOUS, flinty.

SILICLE, the small short pod of *Cruciferae*.

SILIQUA, the long cylindrical pod of *Cruciferae*.

SILICUSTRUM. See *Cercis Silicustrum*.

SILK COTTON-TREE. See *Bombax*.

SILKEN PUBESCENCE, a very soft kind of pubescence.

SILK TREE. See *Acacia julibrissin*.

SILPHIUM, *Linn.* From *silphion*, the Greek name applied to an Asafetida plant. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. Tall-growing plants, of little beauty, and best adapted for the back of flower-borders. Any common soil suits them; and they may be increased freely by dividing the plants at the root. *Synonymes*: 1, *Coreöpsis latifolia*; 2, *S. tomentosum*.

erythrochaalon Yellow. 8, H. Her. P. 4 N. Amer.
glabrum 1. Yellow. 8, H. Her. P. 4 N. Amer. 1786

SILVER-WOOD. See *Mouriria Guiana*.

SILYBUM, *Vaillant*. A name applied by Greek writers to a plant now unknown. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. These plants succeed in any common soil, and are propagated by seeds. *Synonymes*: 1, *Cnicus cernuus*; 2, *Carduus marianus*.

cernuum 1. Yellow. 6, H. Her. P. 4 Siberia. 1775
Marianum 2 Purple. 7, H. B. 4 Brit., banks.

SIMABA, *Aublet*. The native name of *S. guianensis*. *Linn.* 10, Or. 1, Nat. Or. *Simarubaceæ*. These shrubs should be grown in a mixture of turfy loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat.

guianensis. White 5, S. Ev. S. 10 Guiana. 1826
orinocensis. White 5, S. Ev. S. 10 Orinoco. 1818

SIMARUBA, *Aublet*. *Simarouba* is the Caribbean name of *S. officinalis*. *Linn.* 10, Or. 1, Nat. Or. *Simarubaceæ*. Valuable plants, on account of their medical properties. For culture and propagation, see *Quassia*. The *Simarouba* in *Materia Medica*, is the bark of the root of *S. officinalis*; it is much used in curing obstinate dysenteries and diarrheas. Fluxes, induced by warm climates, are speedily cured by this bark. *Synonymes*: 1, *Quassia excelsa*; 2, *Quassia Simarouba*.

excelsa 1. Yel. wht. 5, S. Ev. T. 35 Jamaica. 1818
glabra. White. 5, S. Ev. S. 10 Cuba. 1824
officinalis 2 Yel. wht. 5, S. Ev. S. 10 W. Indies. 1789

SIMARUBACEÆ, or **QUASSIADS**, are trees and shrubs, with intensely bitter wood: they are all natives of tropical climates, and are much used in medicine.

SIMETHIS, *Kunth*. Name not explained. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Heath-mould and sand suit this plant well; and increase is by division of the roots. *Synonyme*: 1, *Anthëricum planifolium*.

planifolium 1 Purple. 6, H. Her. P. 1 Brit., heaths.

SIMPLE, not divided.

SÍMSIA, *Pers.* In honour of J. Sims, M.D., editor of *Bol. Mag.* *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. *Synonyme*: 1, *Coreöpsis amplexicaulis*. See *Coreöpsis* and *Ximeniësia*. *amplexifolia* . Yellow . 6, G. Ev. S. 4 N. Holl. . 1825 *amplexicaulis* 1, *ficifolia*.

SINÁPIS, *Tournefort*. From the Celtic *nap*, a designation applied to all plants resembling the cabbage or turnip. *Linn.* 15, Nat. Or. *Brassicææ*. Principally annual plants; the seeds of which have only to be sown in the open ground in spring. Mustard (the use of which is familiar to every one) is the ground seed of *S. nigra*. *S. alba* is extensively cultivated as a small salad. The seeds are also swallowed whole, to the quantity of a table-spoonful, or more, to stimulate the stomach in some cases of dyspepsia, and to excite the peristaltic motion of the intestines, when they are torpid. See *Dilésmsis*, *Diplótaxis*, and *Erucária*.

SINGANA, *De Candolle*. *Singasinga* is the name of the tree in Guiana. *Linn.* 13, Or. 1, Nat. Or. *Clusiaceæ*. This pretty shrub grows well in a mixture of loam and peat; and ripened cuttings, planted in sand, and placed under a hand-glass in heat, will soon strike root. *Synonyme*: 1, *Stereöckia laterifolia*.

guianensis . White . 6, S. Ev. Cl. 3 Guiana . 1827

SINGHARA NUT. See *Trapa bispindsa*.

SINGLE-SEEDED CUCUMBER. See *Sicyos*.

SINNÍNGIA, *Nees*. In honour of William Sinning, gardener to the University of Bonn, on the Rhine. *Linn.* 24, Or. 2, Nat. Or. *Gesneraceæ*. This genus of very pretty plants ought to be in every collection. Their culture and propagation is the same as that recommended for the genus *Gloxinia*. *Synonyme*: 1, *S. violöæa*, *Gloxinia violöæa*.

SIPHONANTHUS. See *Clerodëndron*.

SIPHONIA, *Richard*. From *siphon*, a pipe; the use made of the exudation, which constitutes Indian rubber. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. This plant grows freely in sandy loam and peat; and cuttings of the half-ripened wood will root in sand, under a glass, in heat. The Caoutchouc of Para is obtained from this species. *Synonymes*: 1, *S. elastica*, *Jatropha elastica*, *Hevea guianensis*.

Cañtchu 1. Grn. wht. . 5, S. Ev. S. 6 Guiana . 1823

SIRIBÖA. See *Piper Siriböa*.

SIR JOSEPH BANKS' PINE. See *Araucária imbricata*.

SÍSARUM. See *Stum Sisarum*.

SISON, *Linn.* From the Celtic *sisun*, a running stream; some plants formerly in this genus were found in running streams. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. The seeds merely require sowing in common garden soil in spring. *Synonyme*: 1, *Stum verticillatum*—*amönum*, *arvense*, *capillaceum*, *flexuosum*, *verticillatum* 1. See *Cörum*, *Chærophýllum*, *Helosciadum*, *Ligüsticum*, *Petroselinum*, *Schältzia*, *Smýrnium*, and *Trágium*.

SÍSÖO. See *Dalbergia Sísöo*.

SISTOTRÉMA, *Fries*. From *sisto*, to place, and *trema*, orifice; alluding to the pores being in rows. *Linn.* 24, Or. 9, Nat. Or. *Agaricææ*. This species is found by the waysides—*confluens*.

SISYMBRIUM, *Allioni*. An old Greek name of unknown origin. *Linn.* 15, Nat. Or. *Brassicææ*. *S. Millefolium* is a pretty shrub, growing freely in any light soil; and readily increased by cuttings. The others are worthless annuals and biennials, flourishing in the open ground, in any soil. *Synonymes*: 1, *S. sinapioides*, *Sinäpis pyrenaica*; 2, *S. altissimum*; 3, *S. orientale*; 4, *S. Loesëlii*; 5, *S. gallicum*; 6, *S. glabrum*; 7, *Erysimum officinale*; 8, *S. affine*; 9, *S. contortum*. See *Andreöskia*, *Barbarea*, *Brässica*, *Diplótaxis*, *Leptanthum*, *Leptocarpæa*, and *Nasturtium*.

SLIPPER-PLANT, or SLIPPER-SPURGE. See *Pedicularis*.

SLIPPERWORT. See *Calceolaria*.

SLOÆNEA, *Linn.* In honour of Sir Hans Sloane, once President of the Royal Society, founder of the British Museum, and Chelsea Botanical Garden: died in 1753. *Linn.* 13, Or. 1, Nat. Or. *Tiliaceæ*. A genus of fine lofty-growing trees, with large leaves. They succeed best in a mixture of loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat.

dentata . . . White . . . 5, S. Ev. T. 35 S. Amer. . . 1752

SMEATHMANNIA, *De Candolle*. In honour of Smeathman, a naturalist, who travelled in Africa, and collected many botanical specimens. *Linn.* 13, Or. 6, Nat. Or. *Passifloraceæ*. A very beautiful genus, which ought to be in every stove. A compost of loam, peat, and sand, suits it; and half-ripened cuttings root freely in sand, under a glass, in heat. *Synonymes*: 1, *Bulowia insignis*.

pubescens 1 . . . White . . . 2, S. Ev. S. 6 S. Leone . . . 1845

SMEGMARIA. See *Quillaja*.

SMILACEÆ, or SARSAPARILLAS. These plants are not ornamental, they have a climbing habit, inconspicuous flowers, and are only worth cultivating in botanical collections.

SMILACINA, *Desfontaines*. From *smile*, a scraper;

alluding to the roughness of the stems. *Linn.* 6, Or. 1, Nat. Or. *Smilacæ*. Interesting plants, succeeding well in any light soil; and increased readily by divisions.

SMILAX, *Linn.* From *smile*, a scraper; the stems are rough from prickles. *Linn.* 22, Or. 6, Nat. Or. *Smilacæ*. Climbers, of little beauty. They grow well in loam and peat; and increase readily by suckers. *S. Sarsaparilla* is well known as a restorative of health, after the use of mercury. *Synonymes*: 1, *S. mauritānica*; 2, *S. lanceolata*, *Watsōni*.

SÔJA, *Mench.* From *soofa*, the name given to a sauce prepared from the seeds in Japan. *Linn.* 17, Or. 4, Nat. Or. *Fabacæ*. The seeds of this plant may be sown in a warm sheltered situation in May, or raised with the tender annuals, and afterwards planted out. *Synonyme*: 1, *Dolichos Sôja*.

<i>hispida</i> 1 . . .	Violet . 7, H. A. 3	E. Indies . 1790
------------------------	---------------------	------------------

SOLANACÆ, or **NIGHTSHADES**. This forms a considerable group of plants of which the potato (*Solanum tuberosum*), tobacco (*Nicotiana*), henbane (*Hyoscyamus*), the winter cherry or Cape gooseberry (*Physalis*), the love-apple or tomato (*Lycopersicum*), and the deadly nightshade (*Atropa Belladonna*), may be taken as examples of the order.

SOLANDRA, *Linnaeus*. In honour of Daniel Charles Solander, LL.D., F.R.S., a Swede, companion of Sir Joseph Banks in his voyage round the world, and collector of the botanical notes made during that expedition. They are preserved in the British Museum, and exhibit great learning and deep research. *Linnaeus* 5, Or. 1, Nat. Or. *Solanaceae*. This is a splendid genus of plants; the foliage being very fine, and the flowers large, like those of the *Brugmansia*. The best way to induce them to flower is to grow them in two parts turfy loam and one of peat, liberally applying heat and water till they have perfected a good growth; then gradually withhold water until the leaves drop off from drought, and they will flower profusely. Cuttings, planted in mould or tan, will root without any difficulty. Those taken from the flowering shoots are more likely to produce flowers while small.

SOLANUM, *Linnaeus*. The derivation of this word is quite uncertain; some derive it from *Sol*, the sun; others say it is *Sulanum*, from *sus*, being serviceable in disorders of swine; and others assert that it is from *solor*, to comfort, referring to its soothing, narcotic effects. *Linnaeus* 5, Or. 1, Nat. Or. *Solanaceae*. All the more showy species of this extensive genus thrive best in a light rich soil, and are readily increased by seeds, or by cuttings, in sand, under a glass. A great number of them are highly deserving of cultivation, on account of their ornamental appearance. The seeds of the tender annual species should be raised on a hotbed, and planted out in the open ground about the end of May in a sheltered, dry situation. *S. tuberosum* is that well-known and invaluable root, the potato, which, in a state of putrefaction, is said to give out a most vivid light, sufficient to read by. This was particularly remarked by an officer on guard at Strasburg, who thought the barracks were on fire, in consequence of the light thus emitted from a cellar full of potatoes. *S. nigrum* and some others are highly virulent poisons. *S. Dulcamara* is a very dangerous plant; when first bruised or chewed it is bitter, which quickly gives place to a considerable degree of sweetness, hence its name, *Dulcamara*, or *Bitter-sweet*. The berries may be readily taken for currants by children; they excite vomiting and catharsis. Floyer states that thirty of them killed a dog in less than three hours, remaining undigested in the stomach. *Synonymes*: 1, *Nyctærium amazonicum*; 2, *S. Quilense*; 3, *S. violaceum*; 4, *N. cornutum*; 5, *N. Fontanesianum*; 6, *N. lobatum*; 7, *N. heterodoxum*; 8, *S. undatum*; 9, *S. miniatum*; 10, *S. longifolium*; 11, *S. ovigerum*; 12, *S. insaanum*; 13, *S. uniflorum*; 14, *S. melanocerasum*; 15, *S. Cervantesii*; 16, *S. spinosissimum*; 17, *N. rostratum*; 18, *S.*

oleraceum; 19, *N. cordifolium*; 20, *S. dulcamaroides*. See *Lycopersicum* and *Nyctærium*.

montana	Purple	. 4, H. Her.	P. 1	Bohemia	1816
pusilla	Blue	. 4, F. Her.	P. 1	Switzerl.	1820

SOLDEVILLA, Lagasca named this genus in honour of one of his friends. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. This plant is of common culture, and propagated by divisions or seeds. See *Hispidilla*.

setosa . . . Yellow . . . 5, H. Her. P. 1 Spain . . . 1822

SOLDIER-WOOD. See *Ingá purpurea*.

SOLÉA, Sprengel. In honour of W. Solé, author of an essay on the genus *Mentha*. *Linn.* 5, Or. 1, Nat. Or. *Violaceae*. A curious little plant, requiring protection during severe frosts. A limestone soil seems to suit it best; and it is increased by divisions or seeds. *Synonymes* : 1, *Vidua cóncolor*. See *Ionidium*.

cóncolor 1 . . Green . . . 6, H. Her. P. 1 N. Amer. 1788

SOLÉNA. See *Posoqueria*.

SOLENÁNTHA, Don. See *Cryptandra spinescens*. **SOLENÁNTHUS, Don.** From *solen*, a tube, and *anthos*, a flower. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceae*. For culture, see *Borago*.

circinata . . . Purple . . . 6, H. Her. P. 2 Altai . . . 1837

SOLÉNA, Hoffman. From *solen*, a tube; on account of the tubular nature of the fronds. *Linn.* 24, Or. 7, Nat. Or. *Conferveae*. These plants are found in ditches and in the ocean—*clathrata*, *c. uncinata*, *compressa*, *c. crinata*, *intestinalis*, *i. maxima*, *Linza*, *L. lanceolata*.

SOLENÍDIUM, Lindley. From *solen*, a tube.

Linn. 20, Or. 1, Nat. Or. *Orchidaceæ*. This curious genus is nearly related to *Oncidium* and *Brassia*; from both of which it is distinguished by its narrow stalked wartless lip, three-lobed anther-lid, and very peculiar pollen masses which are bent down upon the caudicle, while in the anthers. For culture, &c., see *Oncidium*.
racemösium . Yel. red . 11, S. Epi. $\frac{1}{2}$ Pamplona

SOLIDAGO, *Linn.* From *solidare*, to unite; on account of the vulnerary qualities of the plants. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An extensive genus of coarse flowering plants, suitable for the back of flower-borders. Any common soil suits them; and they are readily increased by divisions of the root. *Synonymes*: 1, *S. montana*; 2, *S. argentea*; 3, *S. retrorsa*; 4, *Conyza rugosa*. See *Aster*, *Caledacte*, and *Euthamia*.

SOLITARIUS, alone, distinct.

SOLIVA, *Ruiz and Pavon*. In honour of Salvator Soliva, a Spanish physician and botanist. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. Annuals of little beauty. *S. anthemifolia* requires the treatment common to half-hardy annuals. *Synonymes*: 1, *Gymnöstyles anthemifolia*; 2, *G. stolonifera*.

<i>anthemifolia</i> 1	Apetal . 6, H.	A. $\frac{1}{2}$ N. Holl.	1818
<i>stolonifera</i> 2	Apetal . 6, H.	A. $\frac{1}{2}$ Portugal	1816

SOLLYA, *Lindley*. In honour of Richard Horsman Solly, a vegetable physiologist and anatomist. *Linn.* 5, Or. 1, Nat. Or. *Pittosporaceæ*. Ornamental plants, succeeding in loam and peat; and increased by cuttings, planted in sand, under a glass. *Synonymes*: 1, *Billardiera fusiformis*; 2, *B. heterophylla*; 3, *B. heterophylla linearis*.

<i>angustifolia</i> 1	Blue . . . 7, G. Ev. Tw. 6	V. D. L.	1823

SOLOMON'S SEAL. See *Convallaria*.

SOLORINA, *Acharius*. From *solos*, solid, and *rhinos*, skin; in allusion to the firm texture of the fronds. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. Leafy fronds, found on the soil upon the tops of mountains—*crœcea*, *saccata*.

SOMNIFEROUS, causing sleep.

SÖNCHUS, *Linn.* From *somphos*, hollow; the stems are hollow. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Plants of easy culture, in any common soil. The shrubby kinds are increased by cuttings, placed in sand, under a glass; the herbaceous species by divisions. The seeds of the annual and biennial kinds only require to be sown in the open ground. *Synonymes*: 1, *S. Jacquinii*; 2, *Mulgedium multiflorum*. See *Agathærus*, *Picridium*, and *Mulgedium*.

SOPHORA, R. Brown. Altered from *sophora*, the Arabic name of a papilionaceous tree. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. *S. chinensis* and *S. japonica* are two of the most handsome species, and well adapted for growing singly on lawns. When young, they require a slight protection in winter. They are sometimes increased by layers, but generally by seeds. The stove and greenhouse kinds thrive well in a light loamy soil; and cuttings will root, if planted in sand, under a glass. The hardy herbaceous kinds are increased by dividing the roots in spring. *Synonyme*: 1, *Astragalus carnosus*. See *Anmodendron, Cyclophia, Edwardsia, Thermopsis*, and *Virgilia*.

SPARGÁNÍUM, *Linn.* From *sparganon*, a fillet; because of the riband-like leaves. *Linn.* 21, Or. 3, Nat. Or. *Typháceæ*. The common *Bur Reed*, found in ditches and stagnant waters; increased by seeds—*alpinum*, *nátans*, *ramósum*, *simplex*.

SPARGANÓPHORUS, *Gartner*. From *sparganon*, a fillet, and *phoreo*, to bear; shape of the seeds. *Linn.* 19, Or. 1, Nat. Or. *Asteráceæ*. Tender annuals, not worth cultivating—*Stráichium*, *Vaillántii*, *verticillatus*.

SPARMÁNNA, *Thunberg*. In honour of Andrew Sparmann, M.D., a Swedish botanist, who accompanied Captain Cook in his second voyage round the world. *Linn.* 13, Or. 1, Nat. Or. *Filiáceæ*. These beautiful early-flowering shrubs succeed best in a mixture of loam and

peat; and cuttings root freely in sand, under a glass.

SPÁRTÍUM, *Linn.* From *sparton*, cordage; use made of the plant in early ages. *Linn.* 16, Or. 6, Nat. Or. *Fabáceæ*. These plants, from being very ornamental when in flower, are well adapted for planting in shrubberies. They are usually increased by seeds, but cuttings of the young wood will root, if planted under a glass. See *Adenocárpus*, *Calycótome*, *Cytisus*, and *Génista*.

SPÁTHA, a broad sheathing leaf, enclosing flowers arranged on a spadix.

SPATHÉLIA, *Linn.* From *spathe*, a palm-tree; similarity of habit. *Linn.* 5, Or. 3, Nat. Or.

Amyridaceæ. This tree succeeds best in a mixture of loam and peat; and ripened cuttings will root in sand, under a glass, in heat.
simplex . . Red . . 4, S. Ev. T. 30 Jamaica 1778

SPATHICARPA, *Hooker*. From *spatha*, a spathe, and *karpas*, a fruit. *Linn.* 21, Or. 7, Nat. Or. *Aracææ*. For culture, see *Caladium*.
hastifolia . . White . 7, S. Her. P. 1 S. Amer.

SPATHODEA, *Beauvois*. From *spatha*, a spathe, in reference to the form of the calyx. *Linn.* 14, Or. 2, Nat. Or. *Bignoniaceæ*. This is a genus of truly splendid plants when in flower. For culture and propagation, see *Bignonia*.
Synonymes: 1, *Bignonia fraxinifolia*; 2, *B. chelonoides*; 3, *B. spathacea*; 4, *B. quadrilobaris*; 5, *B. uncata*; 6, *B. serrulata*; 7, *S. tulipifera*, *Bignonia tulipifera*.

SPATHULEA, *Fries*. From *spathula*, a spreading-knife; so named from the form of the plant. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. This species is found in autumn upon dead leaves—*flavida*.

SPÁTULA, a spatulate-shaped process.

SPATULARIA. See *Saxifraga*.

SPATULATE, like a spatula, a knife having the upper end broadest.

SPEARWORT. See *Ranunculus flammæa*.

SPEAR-MINT. See *Mentha viridis*.

SPECKLÍNIA, *Lindley*. Named after Rudolph Speckin, the artist who drew the woodcuts in Fuchs's *Historia Plantarum*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Small plants, with dull green, purple-spotted flowers. For culture and propagation, see *Burlingtonia*. See also *Pleurothallis*.

SPÉCULUM. See *Prismatocarpus Speculum*.

SPEEDWELL. See *Veronica*.

SPELT. See *Triticum spelta*.

SPÉNNERA, *De Candolle*. In honour of M. Spenner, a distinguished botanist. *Linn.* 8, Or. 1, Nat. Or. *Melastomaceæ*. Pretty plants, requiring to be grown in a mixture of peat and sand, and the pots to be placed in pans of water; they are propagated by seeds.

fragilis . . White . 6, S. Ev. S. 2 Trinidad 1822
glandulosa . White . 3, S. Ev. S. 2 Guiana . 1824
paludosa . . Rose . 6, S. Her. P. 1 1/2 Brazil . 1825
pendulifolia . Rose . 3, S. Ev. S. 2 Guiana . 1826

SPÉRGULA, *Linn.* From *spargo*, to scatter; because it expels its seeds. *Linn.* 10, Or. 4, Nat. Or. *Illecebreææ*. None of these plants are worth cultivating, except in botanical gardens. They grow in any moist situation—*glabra*, *laricina*, *maxima*, *nodosa*, *pilifera*, *saginoides*, *subulata*. See *Arenaria*.

SPERGULARIA, *Persoon*. Altered from *Spergula*, which see for explanation. *Linn.* 10, Or. 4, Nat. Or. *Caryophyllaceæ*. Worthless plants, undeserving of the culturist's care—*arvensis*, *pallida*, *pentandra*.

SPERGULÁSTRUM, *Michaux*. From *spergula*, spurry, and *astrum*, an affixed term, signifying like. *Linn.* 10, Or. 3, Nat. Or. *Caryophyllaceæ*. This species is of no interest, except in botanical collections. Sandy peat suits it, and young plants may be obtained by dividing the roots or by seeds. *Synonyme*: 1, *Micropetalon lanuginosum*.

lanuginosum 1 Wt. pur. 6, H. Her. P. 1/3 N. Amer. 1821

SPERMACŒCE, *Dillenius*. From *sperma*, a seed, and *akoke*, a point; in allusion to the capsule being crowned by the calycine points. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. The species of *Spermaceæ* are of the simplest culture. Any light soil suits them; and cuttings of the shrubby and perennial kinds root freely in the same kind of soil, in a little heat. The annual species require the treatment common to hardy and tender annuals. *Synonymes*: 1, *S. lævis*; 2, *S. strigosa*. See *Bigelovia*, *Hedyotis*, and *Knöxia*.

glabra . . White . 7, H. A. 1 N. Amer. 1823

SPERMADICTYON. See *Hamillénia*.

SPERMÁXYRUM, Labillardière. From *sperma*, a seed, and *axyra*, an anchor; the umbilical funicle is shaped like an anchor. *Lin.* 3, Or. 1, Nat. Or. *Oleaceæ*. This species succeeds best in loam and peat; and cuttings will root in sand, under a glass.

strictum . . . White . . . 6, G. Ev. S. 4 N. HbL. 1820

SPÉRMODERM, the outer covering of a seed.

SPERMOEDIA, Fries. From *sperma*, a seed, and *anoidco*, to swell; the diseased seeds. *Lin.* 24, Or. 9, Nat. Or. *Mucoraceæ*. This very minute species is found in autumn on the glumes of grasses—*clavus*.

SPEYSIDE PINE. See *Pinus sylvestris* *horizontalis*.

SPHÆCELATE, withered, or dead.

SPHACÈLE, Bentham. From *sphakos*, sage; similarity. *Lin.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Free-flowering plants, of easy culture in any light rich soil. Cuttings root readily in earth, under a glass. *Synonyme*: 1, *Stachys Salvia*.

campanulata . . . Pa. blue 7, G. Ev. S. 2 Chile 1795
Lindleyi . . . Violet . . . 7, G. Ev. S. 2 Chile 1825

SPHACELLARIA, Lyngbye. From *sphakelos*, gangrene; appearance of the truncate extremities of the fronds. *Lin.* 24, Or. 7, Nat. Or. *Fucaceæ*. These species are found in the ocean, on the sea-shore, &c.—*cirrhosa*, *c. patentissima*, *disticha*, *Mertensii*, *plumosa*, *racemosa*, *radicans*, *scoparia*.

SPHÆRÁLCEA, St. Hilaire. From *sphaira*, a globe, and *alcea*, marsh-mallow. The carpels are disposed in a round head. *Lin.* 16, Or. 8, Nat. Or. *Malvaceæ*. Ornamental plants. For culture and propagation, see the greenhouse species of *Malva*. *Synonymes*: 1, *Malva abutiloides*; 2, *M. angustifolia*; 3, *M. caroliniana*, *Modiola caroliniana*; 4, *Malva decumbens*, *Modiola decumbens*; 5, *Malva elegans*; 6, *M. obtusiloba*; 7, *M. prostrata*, *Modiola prostrata*; 8, *Malva umbellata*.

SPHÆRÁNTHUS, Linn. From *sphaira*, a globe, and *anthos*, a flower; alluding to the globular heads of flowers. *Lin.* 19, Or. 1, Nat. Or. *Asteraceæ*. Stove plants, not worth growing—*africanus*, *cochinchinensis*, *hirtus*, *indicus*, *mollis*.

SPHÆRIA, Linn. From *sphaira*, a globe; their shape. *Lin.* 24, Or. 9, Nat. Or. *Helvellaceæ*. An extensive genus of very minute plants, found at all seasons on a variety of decayed substances, as on the leaves and trunks of trees, honeysuckle leaves, fir cones, &c.—*acervata*, *acuminata*, *acuta*, *Agopodii*, *affinis*, *alutacea*, *ambiens*, *Angelica*, *anserina*, *aquifolia*, *aquila*, *arbuticola*, *artocreas*, *arundinacea*,

aspera, *atropurpurea*, *atrovirens*, *Avellaneæ*, *aurantia*, *aurea*, *Berberidis*, *biformis*, *bifrons*, *bombarda*, *botryosa*, *Brassicæ*, *brunneola*, *dulata*, *byssiseda*, *calva*, *canescens*, *capitata*, *carpophila*, *ceratosperma*, *ceuthocarpa*, *ceuthosporoides*, *cinnabarina*, *cirrhosa*, *citrina*, *clypeata*, *coccinea*, *coherens*, *comata*, *complanata*, *concentrica*, *convergens*, *cornicola*, *corniculata*, *coronata*, *Coryli*, *crinita*, *culmifraga*, *cupularis*, *curvirostra*, *Dematium*, *deusta*, *Dianthi*, *digitata*, *dioca*, *disciformis*, *discutiens*, *ditopa*, *doctolum*, *dothidea*, *duplea*, *elliptica*, *elongata*, *Empetri*, *enteroleuca*, *entipa*, *entomorrhiza*, *excupuliformis*, *favacea*, *ferruginea*, *fibrösa*, *filicina*, *fimbriata*, *fineti*, *flavovirens*, *fragiformis*, *frondicola*, *fuliginosa*, *furfuracea*, *fusca*, *gelatinosa*, *gnomon*, *gracilis*, *Graminis*, *gyrosa*, *Hederae*, *hederica*, *herbarum*, *hirsuta*, *hispida*, *Hookeri*, *hypodermica*, *hypoxylon*, *hystria*, *Ilicis*, *immersa*, *inguinans*, *inquinata*, *irregularis*, *juglandis*, *Junci*, *Kerria*, *Laburni*, *lata*, *lephemia*, *leucostoma*, *lignaria*, *lirella*, *livida*, *longissima*, *Lonicerae*, *maculaeformis*, *malorum*, *mammæformis*, *melogramma*, *microscopica*, *militaris*, *millenpunctata*, *milliaria*, *moriformis*, *myriiformis*, *myricocampa*, *nebulosa*, *nidula*, *nigrella*, *nivea*, *nucula*, *nummularia*, *obdicens*, *obturata*, *ocellata*, *ochracea*, *ophioglossoides*, *ostreuthis*, *ovina*, *pellita*, *petiolorum*, *Peziza*, *pilifera*, *pilosa*, *Pinastri*, *Pisi*, *Platascæ*, *polymorpha*, *pomiformis*, *populina*, *profusa*, *pruinosa*, *Prunastri*, *pulchella*, *pulveracea*, *pulvis*, *pyræus*, *punctatus*, *punctiformis*, *quaternata*, *quercina*, *Racodidum*, *ramosa*, *recutita*, *rubicina*, *Rubis*, *rosella*, *rostellata*, *rubella*, *rubiginosa*, *rudis*, *rufa*, *salicella*, *salicina*, *sanguinea*, *s. cicatricum*, *scirpicola*, *scrophulariæ*, *semiimmersa*, *sepicola*, *serpens*, *setacea*, *Solanii*, *Sorbi*, *sordaria*, *spermoides*, *sphærocéphala*, *spinosa*, *stellulata*, *stilbostoma*, *striefiformis*, *strigosa*, *strobilina*, *styginea*, *succenturiata*, *Taleola*, *Tamariscinus*, *Taxi*, *Tiliae*, *Trifolii*, *tristis*, *tubæformis*, *üda*, *umbrina*, *undulata*, *Vaccinii*, *velata*, *verruceformis*, *verrucosa*, *vibratilis*, *Yuccæ*.

SPHÆROBOLUS, Tode. From *sphaira*, a globe, and *ballo*, to eject; the plant becomes elastic and emits a spherical sporangium. *Lin.* 24, Or. 9, Nat. Or. *Lycoperdaceæ*. Found in autumn, on dead wood, shavings, sawdust, &c.—*stellatus*.

SPHÆROCÁRPU, Michaux. From *sphaira*, a globe, and *karpos*, a fruit; the seed-vessel is globular. *Lin.* 24, Or. 6, Nat. Or. *Ricciaceæ*. This species is found during winter, in damp places—*terrestris*. See *Trichia*.

SPHÆROCÓCCUS, Agardh. From *sphaira*, a globe, and *kokkos*, fruit; the theca is round. *Lin.* 24, Or. 7, Nat. Or. *Ceramidaceæ*. The species of *Sphærococcus* are found in the ocean, and on the sea-shore. *Synonyme*: 1, *Chondria pusilla*—*acicularis*, *Brodiaei*, *cartilagineus*, *confervoides*, *c. albidus*, *c. geniculatus*, *c. procerrimus*, *c. cornus*, *c. clavatus* 1, *c. clavifer*, *c. nereideus*, *c. pinnatus*, *c. pulchellus*, *coronopifolius*, *crispus*, *cristatus*, *c. linearis*, *gigartinus*, *Griffithsiae*, *lichenoides*, *mammillösus*, *membranifolius*,

norvægicus, plicatus, purpurascens, rubens, Teedii.
SPHEROLBIDIUM, *Smith*. From *sphaira*, a sphere, and *lobos*, a pod; the pods are spherical. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. These plants succeed best in a mixture of loam and peat; and young cuttings root freely in sand, under a glass. *Synonyme*: 1, *S. minus*.
acuminatum . Orange . 5, G. Ev. S. 2 Swan R. 1842
medium . . Red . . 7, G. Ev. S. 2 N. Hol. 1803
vimineum 1 . Yellow . 7, G. Ev. S. 2 N. Hol. 1802

SPHEROMORPHÆA, *De Candolle*. See *Grægea minima*.

SPHERONEMA, *Fries*. From *sphaira*, a sphere, and *naima*, gelatine; in allusion to the mucous receptacle in which the sporules are inclosed. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Found on dead wood—*blepharistoma, subulatum*.

SPHEROPHORON, *Persoon*. From *sphaira*, a globe, and *phoreo*, to bear; form of fructification. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. A very elegant genus of *Lichens*, easily known by its branched, smooth habit. The species are found on rocks—*compressum, coraloides, fragile*.

SPHEROPHYSA, *De Candolle*. From *sphaira*, a sphere, and *physa*, a bladder; the pods are spherical and bladdery. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. This species succeeds in common garden soil; but is difficult to preserve on account of the want of that saline principle in which it grows in its native country; the plants should, therefore, be occasionally watered with salted water: they are increased by seeds, which are sometimes ripened in this country. *Synonymes*: 1, *Colutæa cæspicia, Phaca salsula*.
cæspica 1 . Red . . 7, H. Her. P. 2 Siberia 1818

SPHEROPTERIS, *Wallich*. From *sphaira*, a globe, and *ptēris*, a fern. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove fern. *Synonyme*: 1, *Peranema barbata*.
barbata . . Yellow . 6, S. Her. P. 1 Nepaul .

SPHEROSTEMMA, *Blume*. From *sphaira*, a globe, and *stemma*, a crown; the filaments of the stamens are coadunated into a fleshy solid mass, the anthers only being at liberty, and nestling in a number of little excavations of the mass. *Linn.* 22, Or. 12, Nat. Or. *Schizandraceæ*. These interesting plants succeed well in a mixture of sandy peat and loam; and cuttings root in sand, under a glass, in heat. *Synonyme*: 1, *Kadsura propinqua*.
marmoratum Yellow . 7, S. Ev. Cl. 6 Borneo .
propinquum 1 Yellow . 7, S. Ev. Cl. 6 Nepal . 1828

SPHEROSTIGMA, *Fischer and Meyer*. From *sphaira*, a globe, and *stigma*, a stigma. *Linn.* 8, Or. 1, Nat. Or. *Onagraceæ*. Same cultivation as for *Enothera*. *Synonyme*: 1, *Enothera spiralis*.

SPHÆRÓTELE, *Presl*. From *sphaira*, a sphere; the stigma is round. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. For cultivation of this genus, see *Amarillis*. *Synonyme*: 1, *Stenomesson coccineum*.
coccineum 1 . Scarlet . 5, G. Bu. P. 1 Peru . 1853

SPHAGNUM, *Linn.* A name used by Pliny for some kind of moss. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. The species belonging to this genus are found in bogs at all seasons. The leaves are nerveless, and of a singularly whitish colour. *Synonymes*: 1, *S. capillifolium*; 2, *S. latifolium*—*acutifolium* 1, *cuspidatum*, *obtusifolium*, o. vulgare 2, o. fluitans, o. minus, squarrosum.

SPHENÁNDRA. See *Buchnera*.

SPHENODÉSME, *Jack*. From *sphen*, a wedge, and *desme*, fascicle; in allusion to the fascicles of flowers. *Linn.* 5, Or. 1, Nat. Or. *Verbenaceæ*. This species succeeds in sandy loam; and is increased by cuttings, planted in sand, under a glass, in heat.

pentandra . . White . 6, S. Ev. Cl. 6 E. Ind. . 1823

SPHENOGYNE, *R. Brown*. From *sphen*, a wedge, and *gyne*, a female; in allusion to the wedge-shaped stigmas. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. This is a genus of very elegant under-shrubs, and half-hardy annuals. They succeed best in a mixture of loam and peat; and cuttings of the shrubby kinds root readily in sand, under a glass. *Synonymes*: 1, *Ursinia feniculacea, Arcotis feniculacea*; 2, *Arcotis leucanthemoides*.

SPHENOTOMA, *R. Brown*. From *sphenoo*, to cleave, and *tome*, a section; in allusion to the deeply-divided limb of the corolla. *Linn.* 5, Or. 1, Nat. Or. *Epacridaceæ*. Ornamental shrubs. For culture and propagation, see *Epacris*. *Synonymes*: 1, *Dracophyllum capitatum*; 2, *D. gracile*.

capitatum 1 . White . 4, G. Ev. S. 1 N. Holl. 1830
gracile 2 . . White . 5, G. Ev. S. 2 N. Holl. 1822

SPHERICAL, round, like a sphere.

SPHERULES, minute spheres, or globules.

SPICATE, having a spike.

SPICKNEL. See *Athamanta*.

SPIDER OPHRYS. See *Ophrys aranifera*.

SPIDERWORT. See *Tradescantia*.

SPIELMÁNNTA, *Medicus*. In honour of R. S. Spielmann, professor of medicine and botany at Strasburg. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. This species will thrive in any light rich soil; and young plants are easily obtained from cuttings, planted in sand, under a glass.

africana . . White . 7, G. Ev. S. 3 C. G. H. 1710

SPIGELLA, *Linn.* In honour of Adrian Spigelius,

professor of anatomy and surgery at Padua, and a botanical author; died 1625. *Linn.* 5, Or. 1, Nat. Or. *Loganiaceæ*. These plants are showy when in blossom, and therefore worth growing; a compost of loam and peat suits them best, and cuttings of the herbaceous species root freely in the same kind of soil, under a glass. The roots of *S. marilandica* are used in North America as a vermifuge, and if administered in large doses, it acts as a powerful cathartic.

Anthelmia . Red . 7, S. A. 1½ S. Amer. 1759
marilandica . Scarlet . 7, H. Her. P. 1½ N. Amer. 1694
splendens . Crimson 7, G. Her. P. 1½ Mexico . 1860

SPIGNELL. See *Athamanta*.

SPIKE, a long rachis of sessile flowers.

SPIKELETS, in grasses, are collections of florets.

SPIKENARD. See *Nardostachys Jatamansi*.

SPIKE RUSH. See *Eleocharis*.

SPILANTHES, *Jacquin*. From *spilos*, a spot, and *anthos*, a flower; in allusion to the original species having yellow flowers and a brown disk. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Worthless plants, requiring the treatment commonly given to stove annuals. *Synonyme*: 1, *Acmella lanceolata*—*Acmella*, *alba*, *brasilensis*, *débilis*, *exasperata*, *oleracea*, *Pseudocmella*, 1, *uliginosa*. See *Acmella*, *Petrobium*, and *Platypteris*.

SPILOCEÆA, *Fries*. From *spilos*, a spot. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. This plant grows upon apples, whence its specific name—*pomi*.

SPILOMA, *Acharius*. *Spiloma*, a spot; appearance of the fructification. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. The species of *Spiloma* are generally found on the bark of trees and decaying wood—*auratum*, *decolorans*, *dispersum*, *melanospum*, *microclonum*, *microscopicum*, *murale*, *punctatum*, *tuberculosum*, *tumidulum*, *t. concolor*, *t. detritum*, *t. dibium*, *t. marginatum*, *t. microstigma*, *t. rosaceum*, *variolosum*, *versicolor*.

SPINACH. See *Spinacia*.

SPINACIA, *Linn.* From *spina*, a prickly; in allusion to the prickly processes of the fruit. *Linn.* 22, Or. 5, Nat. Or. *Chenopodiaceæ*. Valuable herbs, of the commonest culture, and well known by the English name *Spinach*.

oleracea . . . Green . 6, H. A. 1½ . 1568
glabra . . . Green . 6, H. A. 1½
spinosa . . . Green . 6, H. A. 1½

SPINA-CHRISTI. See *Zizyphus Spina-Christi*.

SPINDLE-MOULD. See *Fusarium*.

SPINDLE-TREE. See *Eubonymus*.

SPINES, indurated and pointed branches or processes, which do not fall off from the part that bears them.

SPINOUS, furnished with spines.

SPIRÆA, *Linn.* From *spira*, to become spiral; in allusion to the flexile branches being suitable for twisting into garlands. *Linn.* 12, Or. 2, Nat. Or. *Rosaceæ*. An extensive genus of very handsome plants, when in flower. The shrubby kinds are well adapted for planting in ornamental shrubberies; and are increased by layers, or cuttings of the young wood. The

herbaceous species look well in the flower border; and are easily increased by dividing the plants at the roots. *Synonymes*: 1, *S. hypericifolia acuta*; 2, *S. media*; 3, *S. oblongifolia*; 4, *S. sororia*; 5, *S. Besseriána*; 6, *S. Ulnaria denudata*; 7, *S. allaiensis*; 8, *S. hypericifolia crenata*; 9, *S. carpinifolia*; 10, *S. salicifolia alba*; 11, *S. hypericifolia savranica*; 12, *S. grandiflora*; 13, *S. triloba*; 14, *S. hypericifolia uralensis*, *S. crenata*; 15, *S. argentea*; 16, *S. canescens*; 17, *S. corymbosa*; 18, *Amelanchier racemosa*; 19, *S. flexuosa*; 20, *S. decumbens*. See *Gillenia*, *Holcia*, and *Schizandrus*.

SPIRÁNTHERA, *St. Hilaire*. From *speira*, a spire, and *anthera*, an anther; the anthers are spiral-shaped. *Linn.* 5, Or. 1, Nat. Or. *Rutaceæ*. A very handsome flowering, sweet-scented shrub, thriving in a mixture of sandy loam and peat; and cuttings of the half-ripened wood will root in sand, under a glass; but they must be planted thinly, and the glass occasionally removed to allow them to dry, as they are very liable to damp. *Synonyme*: 1, *Terpnanthus jasminoides*.
odoratissima 1. Wht. red. 7, S. Ev. S. 6 Brazil. 1823

SPIRÁNTHESES, *Richard*. From *speira*, a spiral, and *anthos*, a flower; in allusion to the spiral manner in which the flowers are arranged. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of *Spiránthes* (*Lady's Traces*) require the same treatment as the *Nocttia*. *Synonymes*: 1, *Ophrys cernua*, *Nocttia cernua*, *N. gemmipara*, *S. gemmipara*. See *Nocttia* and *Sarcoglottis*.

SPIRONEMA, *Lindley*. From *speira*, spiral, and *nema*, filament. *Linn.* 6, Or. 1, Nat. Or. *Commelynaceæ*. A Mexican herbaceous plant, introduced by Mr. Barker, with something of the appearance of a *Sansevieria*; the flowers are very fragrant.
fragrans . . . White . 5, S. Her. P. 2 Mexico. 1839

SPLACHNUM, *Linn.* From *splachnum*, one of the Greek names for moss. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. These plants are chiefly found growing on mountains. *Synonymes*: 1, *S. Turnerianum*; 2, *S. fastigiatum*; 3, *S. ovatum*; 4, *Grimmia splachnoides*—*ampullaceum* 1, *angustatum*, *mnioides*, *m. majus* 2, *m. minus*, *sphaericum* 3, *tenua* 4, *vasculosum*, *v. rugosum*. See *Cyrtodon* and *Dissodon*.

SPLEENWORT. See *Asplenium*.

SPÓNDIAS, *Linn.* The Greek name for a kind of plum; the fruit resembles a plum. *Linn.* 10, Or. 4, Nat. Or. *Spondiaceæ*. The species of *Spóndias* succeed best in a mixture of loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat. The fruit of some of the species is eatable. *Synonymes*: 1, *S. Myrobálanus*; 2, *Mangifera pin-nata*; 3, *S. Mombin*. See *Buchanania*.

SPONGE-TREE. See *Acacia farnesiána*.

SPÓNIA, *Commerson*. *Linn.* 23, Or. 1, Nat. Or. *Ulmaceæ*. This plant will grow readily in any common soil, but requires to be planted in a sheltered place.

Willdenowiana. Green. 5, H. De. S. 4 China.

SPORENDONEMA, *Desmazières*. From *sporos*, a seed, *endon*, within, and *nema*, a thread. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceæ*. Minute species; the first is found on cheese, the last on flies—*cæsi*, *mûsca*.

SPORIDERMUM, *Link.* From *sporos*, a sporule, and *derma*, a skin. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. A minute plant, found on some species of *Theléphora*—*atrum*.

SPOROBOLUS, *R. Brown*. From *sporos*, a seed, and *ballo*, to cast forth; its seeds are loose and easily scattered. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Annual grasses, of simple culture in any common soil, and propagated by seeds. *Synonymes*: 1, *Agrostis diandra*; 2, *A. purpurascens*.

diandrus 1	Apetal	S. Grass	1	E. Ind. 1820	
elongatus	Apetal	S. Grass	1 1/2	N. Hol. 1820

purpurascens 2	Apetal	S. Grass	1 1/2	W. Ind. 1806	
tenacissimus	Apetal	S. Grass	3	E. Ind. 1801	
micranthus	Apetal	S. II.	A. 1	Monte Vid. 1825	

SPORÓCHNUS, *Agardh*. From *sporos*, seed, and *chnous*, wool; because of its reproductive organs being tufted with hair. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. Marine plants—*aculeatus*, *Cabrera*, *ligulatus*, *pedunculatus*, *rhizodes*, *r. major*, *villosus*, *viridis*.

SPOROCYBE, *Fries*. From *sporos*, a seed, and *kube*, a head. *Linn.* 24, Or. 9, Nat. Or. *Botryaceæ*. Found on the decaying stems of plants—*byssoides*, *Calcioides*.

SPORÓTRICHUM, *Link.* From *spora*, a sporule, and *thrix*, a hair; alluding to the filamentous sporules. *Linn.* 24, Or. 9, Nat. Or. *Botryaceæ*. Very minute species, found in various situations, chiefly on decaying substances—*aureum*, *badium*, *fenestræle*, *latebrarum*, *macrosporum*,

minutum, stercorarium, sulphureum, tenuissimum.

SPORULES, in cryptogamic plants, those parts which are analogous to the seeds of other plants.

SPREKELIA, *Herbert. Linn. 6, Or. 1, Nat. Or. Amaryllidaceæ.* For culture, &c., see *Amaryllis*.

brævis . . . Grn. red 6, S. Bl. P. 1 Bolivia . . . 1839

SPRENGELIA, *Smith.* In honour of Christian Conrad Sprengel, of Brandenburg, who published, in 1793, an ingenious work on the manner in which insects promote the impregnation of plants. *Linn. 5, Or. 1, Nat. Or. Epacridaceæ.* This very elegant little shrub requires the same treatment as is recommended for *Epacris*.

incarnata . . . Flesh . . . 5, G. Ev. S. 2 N. S. W. 1793

SPRING GRASS. See *Anthoxanthum*.

SPRING SALAD-ONION. See *Allium Cœpa*.

SPUMARIA, *Persoon.* From *spuma*, froth; appearance of the species. *Linn. 24, Or. 9, Nat. Or. Lycoperidaceæ.* This plant is found in autumn on grass, rotten wood, &c.—*mucilago.* See *Dichosporium*.

SPUMOSUS, frothy.

SPURS, long processes, like horns, produced by various parts of a flower.

SPURGE. See *Euphorbia*.

SPURGE LAUREL. See *Daphne Laureola*.

SPURIOUS, counterfeit.

SPURLESS VIOLET. See *Erpotion*.

SPURREY. See *Spérgula*.

SQUALIDUS, mean, unseemly.

SQUAMARIA, scaly, covered with scales.

SQUAMARIA, *Hooker.* From *squama*, a scale; the thallus is scaly. *Linn. 24, Or. 8, Nat. Or. Parmeliaceæ.* These plants are found on rocks, stones, and trees—*candelaria*, *c. polycarpa*, *cæsia*, *c. dubia*, *circinata*, *Oleventiana*, *crassa*, *eterna*, *elegans*, *epigæa*, *fulgens*, *gelida*, *Hookeri*, *hypnidrum*, *lanuginosa*, *lentigera*, *miniata*, *murorum*, *muscorum*, *rubiginosa*, *saxicola*, *tribacea*.

SQUAMIFORM, { formed like scales.

SQUAMOSE, }

SQUARE PARSLEY. See *Mèrum Bivius*.

SQUARROSE, spreading rigidly at right angles, or in a yet greater degree.

SQUASH. See *Cucurbita Melopepo*.

SQUILLA. See *Ornithogalum Squilla*.

SQUILL. See *Scilla*.

SQUINANCY, an inflammation in the throat.

SQUIRREL GRASS. See *Hordeum murinum*.

SQUIRTING CUCUMBER. See *Momordica Elæterium*.

SQUITCH. See *Agrostis vulgaris* and *Stolonifera*.

STAÄVIA, *Dahl.* In honour of Martin Staaf, a correspondent of Linnaeus. *Linn. 5, Or. 1, Nat. Or. Bruniaceæ.* Elegant little shrubs, succeeding best in a sandy peat soil; cuttings of the young wood will root readily in sand, under a glass. *Synonymes*: 1, *Brunia ciliata*;

2, *B. glutinosa*; 3, *B. radiata*, *Phlegma radiata*.

STACHYDIUM, *Fries.* From *stachys*, a spike, and *eidos*, similar; in allusion to the manner in which the sporules are fixed on the filaments. *Linn. 24, Or. 9, Nat. Or. Botrytaceæ.* Found on dead wood—*bicolor, terrestre*.

STACHYS, *Linn.* From *stachys*, a spike; mode of flowering. *Linn. 14, Or. 1, Nat. Or. Lamidaceæ.* A genus of rather weedy-looking plants, hardly worth cultivating for ornament. They all succeed in common garden soil. The greenhouse species require to be treated as other greenhouse plants. The perennial kinds are easily increased by dividing the root in spring or autumn. The seeds of the annual kinds should be sown in spring, in the open border. *Synonymes*: 1, *S. crética, intermedia, orientalis, sibirica*; 2, *S. tenuifolia*; 3, *S. diffusa, Iberica, scordifolia*; 4, *S. arvensis, hispida*; 5, *S. latifolia*; 6, *Hyssopus anisatus*; 7, *S. biennis, lusitânica, polystachia*; 8, *S. phlomisoides*; 9, *Ambleia inflata*; 10, *S. salvicifolia*; 11, *Sideritis decumbens*; 12, *Sideritis calycantha*; 13, *Stachys ambigua*; 14, *S. Balbisii*; 15, *Sideritis linearifolia*. See *Sphacelle* and *Zizania*.

STAFF-TREE. See *Celastrus*.

STAG'S-HORN. See *Cenomyce cervicornis*.

STALAGMITIS, Murray. From *stalagnos*, a running up; the trees exude a yellow resinous juice when cut. *Linn.* 18, Or. 2, Nat. Or. *Chesiaceæ*. A genus of very fine ornamental trees, thriving well in a mixture of turfy loam and peat, and requiring to be kept in a strong heat. Cuttings of the ripened wood will root in sand, under a glass, in a moist heat. The fruit of some of the species is eatable. The trees yield a yellow viscid juice, hardly distinguishable from gamboge, and used for the same purposes by painters. *Synonymes*: 1, *Xanthochymus edulis*; 2, *X. guineensis*; 3, *X. luteus*; 4, *X. macrophyllus*; 5, *X. ovalifolius*; 6, *X. purpureus*; 7, *X. tinctorius*.

STALAGMITIS. See *Garcinia*.

STALKS, the foot-stalks of leaves or flowers.

STAMEN, the male organ of a flower.

STANDARD, the upper petals in a pea-flower.

STANHØPEA, Hooker. In compliment to Earl Stanhope, president of the Medico-botanical Society. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of *Stanhopea* are splendid plants when in flower, particularly *S. Devonienensis* and *S. tigrina*, both of which are at present rare in collections. The flowers of all the species are more or less fragrant. The following is the method of cultivating these favourite plants at Chatsworth:—Over the drainage-hole of the pot to be used for large plants, is inverted one of a smaller size, generally covering about half the bottom of the pot; above and around this is carefully thrown a quantity of broken pots, sufficient to fill the remaining cavity to within one third of the top. A sufficient quantity of fibrous, moderately-sandy peat is next selected, and placed on the top of the drainage, being first broken into various forms and sizes, but none of them less than a walnut.

In placing these, care is taken to dispose of each, so as to leave a passage for the escape of water; this is more effectually secured by introducing, as the process of potting goes on, a few pieces of broken pots between every layer, more or less, according to the size of the plant; indeed, it is an excellent plan to continue a connexion of broken pots all the way up the centre, to the bottom of the pseudo-bulbs. After the peat becomes level with the summit of the pot, the successive external layers are made fast by means of small pegs, varying from four to six inches long: these pegs penetrate the layers of peat, and thus secure the whole firmly together. At eight inches above the edge of the pot the plant is placed on the top, the roots are carefully laid out, and covered up to the bulbs very carefully with smaller pieces of peat and potsherds, continuing to fasten the peat as before described, until the whole is finished; when it will be a foot or fifteen inches above the top of the pot;—small plants are not potted so high. When a single pseudo-bulb is first potted, it should be but very slightly raised above the level, and when a small plant of two or three bulbs is potted, it should not, at first, be raised more than two or three inches, but as it grows larger it is progressively elevated. In building up, as is here described, with peat, it does not terminate in the shape of a cone, but is carried up nearly square, being merely rounded a little at the top. Unless the plants are very healthy, water is given but sparingly at the roots, and in winter very little or none is supplied; the great desideratum in the cultivation of *Orchidaceæ* being to preserve the roots, which, by over-watering, especially in winter, are almost sure to be destroyed. The general temperature

of the house ranges from 60 to 85 degrees; in the afternoon, during the growing season, it is shut up early, and the paths well watered, and once or twice a week a little water is sprinkled over the plants. They may also be grown well in open wire baskets filled with fresh moss and potsherds, the baskets being hung from the roof of the house, the flowers are seen to great advantage. Young plants are obtained by taking off one or more of the bulbs, potting them in proper sized pots, in the above soil, well drained, and placing them in a warm situation; being careful, in watering, not to allow the smallest quantity to rest upon the young buds. After they have formed roots, increase the size of the pots, and in other respects attend to them as before recommended. *Synonymes*: 1, *Ceratophylus grandiflorus*; 2, *C. insignis*; 3, *C. oculatus*; 4, *Epidendrum grandiflorum*, *Angulda grandiflora*; 5, *S. maculosa*, *Maxillaria lyncæa*, *Angulda Hernandezii*; 6, *Stanhopeastrum eorumum*. STANLEYA. Nuttall named this genus in compliment to Edward Stanley, Earl of Derby, F.R.S., V.P.L.S., President of the Zoological Society, and a munificent patron of the sciences, especially botany and ornithology. *Linm.* 15, Nat. Or. *Brassicaceæ*. A pretty little plant, succeeding well in the open border in vegetable mould; and increased by divisions of the root or by seeds. *Synonyme*: 1, *Cleome pinnata*. *pinnatifida* 1. Yellow . 6, H. Her. P. 1 Louisiana 1816

STÄNNIA. See *Posoquëria*.

STAPÉLIA. Named by *Linnaeus* after Boderus Stapel, a physician of Amsterdam, and commentator on Theophrastus. *Linm.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. An extensive genus of plants, well worth cultivating for their grotesque appearance, and their singularly beautiful starlike flowers, which have usually a very fetid smell. The soil best suited for them is sandy loam and old brick or lime rubbish. The pots should be well drained, and the plants at all times carefully watered, except in winter, when they must be kept in a perpetually dry state. They are readily increased by cuttings, which should, if possible, be only taken off in spring, when the plants are dormant. They should be allowed to dry for a few days after they are taken from the mother plant; after which they may be planted in separate pots, in the same compost as before recommended, when they will strike root in a very short time. *Synonymes*: 1, *S. deflexa*; 2, *S. grandiflora*. See *Caralluma*, *Caruncularia*, *Dudallia*, *Dictyanthus*, *Goniostemon*, *Huëria*, *Obisia*, *Orbea*, *Pectinaria*, *Piaranthus*, *Podanthes*, *Tridénæa*, and *Trombiche*.

STAPHISAGRIA. See *Delphinium Staphisagria*.

STAPHYLÉA. *Linm.* Abridged from *Staphylo-dendron*, its ancient name, from *staphyle*, a bunch, and *dendron*, a tree; the flowers and fruit are disposed in clusters. *Linm.* 5, Or. 3, Nat. Or. *Staphyleaceæ*. Shrubs of very little beauty. They succeed well in any common soil, and are readily increased by suckers from the roots, by layers, or by cuttings, planted in autumn. See *Bumalda*.

Bumalda . . . White . 6, G. De. S. 6 Japan . 1804

occidentalis. White	. 6, S. Ev. T. 25 Jamaica. 1824
pinnata . . . White	. 6, H. De. S. 6 Eng. hedges.

STAPHYLEACEÆ, or BLADDER-NUTS. These are ornamental trees, of small size, and shrubs common in our collections. Very little is known of their uses.

STAR APPLE. See *Chrysophyllum*.

STAR FISH. See *Stapelia Asterias*.

STAR-HEAD. See *Asterociphalus*.

STAR-FRUIT. See *Actinocarpus*.

STARKEA, Willdenow. In honour of the Rev. M. Starke, of Gros Tschirna, in Silesia, a cryptogamic botanist. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A stove herbaceous perennial, growing in any light rich soil, and increased by divisions. *Synonyme*: 1, *Amellus umbellatus* — *umbellata* L.

STAR OF BETHLEHEM. See *Ornithogalum*.

STAR OF THE EARTH. See *Plantago Coronopus*.

STARRY, in the manner of a star, radiating.

STAR THISTLE. See *Centaurus calcitrapa*.

STARWORT. See *Aster*.

STÁTICE, Linn. From *statizo*, to stop; in allusion to the powerful astringency of some of the species. *Linn.* 5, Or. 6, Nat. Or. *Plumbaginaceæ*. The species of *Státice*, or Sea Lavender, ought to be in every garden, on account of their lively little flowers. The greenhouse and frame kinds succeed best in sandy loam and peat, and may be increased by cuttings. The hardy herbaceous species are very suitable for ornamenting the front of flower-borders; they increase freely by division, or seeds, which latter some of them produce in abundance. The root of *S. caroliniana* is one of the most powerful astringents known. *Synonymes*: 1, *Taxanthema australis*; 2, *Státice lyrata*; 3, *S. spatulata*. See *Armeria* and *Acantholimon*.

STAUNTONIA, De Candolle. In honour of Sir George Staunton, Bart., who introduced numerous plants from China. *Linn.* 21, Or. 6, Nat. Or. *Lardizabalaceæ*. A species of easy growth, potted in a mixture of peat and loam, and requiring plenty of room for the roots to run. Cuttings strike freely in sand or soil, under a glass, in heat.

latifolia . . . Lil. grn. . 4, G. Ev. Cl. 10 China . 1846

STAUROCANTHUS, Link. From *stauros*, a cross, and *akantha*, a spine; the spines have each two smaller spines at the side; which give them the appearance of a cross. *Linn.* 16, Or. 5, Nat. Or. *Fabaceæ*. A very beautiful dwarf shrub, well suited for the front of shrubberies; it is easily increased by young cuttings, planted in sand, or by seeds. *Synonyme*: 1, *Ulex genistoides*.

aphyllus 1 . . . Yellow . 5, H. Ev. S. 2 Portugal. 1823

STAVESACRE. See *Delphinium Staphisagria*.

STEGANIA. See *Lomaria*.

STEGANÓTROPIS, Lohm. From *steganos*, covered, and *tropis*, a keel; keel covered with the vexillum. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. A climbing plant, with but little beauty, requiring similar treatment to *Clitoria*.

conjugatus . . . Yellow . 6, S. Cl. A. 3 S. Amer. 1827

STELIS, Swartz. Not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of *Stelis* are small, and rather interesting plants. For culture and propagation, see *Pleurothallis*. *Synonyme*: 1, *S. ciliaris*. See *Physosiphon*.

STELLARIA, *Linn.* From *stella*, a star; the flowers are star-like. *Linn.* 10, Or. 3, Nat. Or. *Caryophyllacée*. Weeds, of no known use. *Synonymes*: 1, *S. uliginosa*; 2, *S. multicaulis*; 3, *S. dichotoma*—aquatica 1, arenaria, bulbosa, cerastoides, c. triflora 2, crassifolia, dahurica, elegans, glauca, graminea, Holóstea, humifusa, latifolia, Laxmanni, longipes, media 3, multicaulis, muralis, nemorum, scapigera, velutina, viscosa. See *Larbræa*.

STELLERA, *Linnæus*. In honour of G. W. Steller, a celebrated botanical collector. *Linn.* 8, Or. 1, Nat. Or. *Thymelacée*. Annuals of easy culture, in sandy peat. *Synonymes*: 1, *Passerina Stellera*; 2, *P. annua*.

Passerina 2 .	Yellow .	7, H. A.	1 S. Eur.	1759

STEMARIA. See *Acrostichum Stemaria*.

STEM-CLASPING, when applied to a leaf, signifies that its base surrounds the stem.

STEMODIA, *Linn.* From *stemon*, a stamen, and *dis*, double; in allusion to each stamen bearing two anthers. *Linn.* 14, Or. 2, Nat. Or. *Serophulariacée*. Plants of little beauty, growing well in any light rich soil, and increased by cuttings or seeds. The annual species are half-hardy. *Synonymes*: 1, *Capraria durantifolia*; 2, *Colamnea trifoliata*.

chilensis . . .	Red . .	9, F. De. Cr.	1 Chile .	1829
suffruticosa 2	Blue . .	7, S. Ev. S.	1 1/2 Grnad.	1820

durantifolia 1, *maritima*, *parviflora*, *verticillaris*, *viscosa*.

STEMONACANTHUS. From *stemon*, a stamen, and *acanthus*; stamens prominent. *Linn.* 14, Or. 2, Nat. Or. *Acanthacée*. For culture and propagation, refer to *Ruellia*. *Synonyme*: 1, *Ruellia macrophylla*.

macrophyllus 1	Scarlet .	6, S. Ev. S.	2 N. Gren.	1840
----------------	-----------	--------------	------------	------

STEMONITIS, *Gleditsch*. From *stemon*, a stamen; the plant may be compared to the male organ of a flower. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiacée*. Found upon rotten wood. *Synonyme*: 1, *Trichia nuda*—fasciculata 1, obtusata, papillata.

STENACTIS, *Nees*. Probably from *stene*, narrow, and *aktis*, a sunbeam; from the narrow and sunlike rays of the expanded flower. *Linn.* 19, Or. 2, Nat. Or. *Asteracée*. This is a very showy plant, well adapted for planting in beds; it grows in any common garden soil; and is readily increased by dividing the root, or by seeds, which it produces in great abundance.

speciosa . . .	Purple .	7, H. Her. P.	2 Californ.	1831
----------------	----------	---------------	-------------	------

STENANTHERA, *R. Brown*. From *stenos*, narrow, and *anthera*, an anther; the filaments are broader than the anthers, which causes the latter to appear narrow. *Linn.* 5, Or. 1, Nat. Or. *Eupacridacée*. This beautiful greenhouse genus requires a soil composed of one third sandy loam, and two thirds very sandy peat. The pot should be well drained, as the fine roots of the plants are easily injured by much wet; it should be kept in a shaded part of the house in summer. Cuttings taken from the young shoots, will strike with ease, if planted in sand, under a glass.

ciliata	Red . .	4, G. Ev. S.	6 Swan R.	1836
pinifolia . . .	Scarlet .	6, G. Ev. S.	6 N. S. W.	1811

STENANTHIUM, *Kunth*. From *stenos*, narrow, and *anthos*, a flower. *Linn.* 23, Or. 1, Nat. Or. *Melanthacée*. This plant is said to be very poisonous, and to furnish a part of the sabadilla seeds of commerce, from which *Veratrum* is procured. The plant grows freely in sandy loam and peat, and is increased by dividing the roots. *Synonyme*: 1, *Veratrum frigidum*.

frigidum 1 .	Black .	6, G. Her. P.	1 1/2 Angangulo	1846
--------------	---------	---------------	-----------------	------

STENIA, *Lindley*. From *stenos*, narrow; in allusion to the form of the pollen masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidacée*. This is rather a pretty genus, requiring to be treated the same as the species of *Maxillaria*.

Beaumontii .	Yellow .	8, S. Epi.	1/2	
palifolia . . .	Yellow .	8, S. Epi.	1/2	Demerara . 1837

STENOCARPUS, *R. Brown*. From *stenos*, narrow, and *karpos*, fruit. *Linn.* 4, Or. 1, Nat. Or. *Proteacée*. An equal mixture of sandy loam and peat suits this genus, and cuttings of the ripened wood will root in sand, under a glass. *Synonymes*: 1, *Agnostus sinuatus*; 2, *Embothrium umbellatum*.

Cunninghami 1	Scarlet 6,	G. Ev. S.	4 Moreton B.	1828
Forsteri 2 . .	White .	6, G. Ev. S.	3 N. Caledon.	1850
salignus . . .	Green .	6, G. Ev. S.	5 N. Holl.	1819

STENOCHILUS, *R. Brown*. From *stenos*, narrow, and *cheilos*, a lip; in allusion to the narrow lip of the flower. *Linn.* 14, Or. 2, Nat. Or. *Myoporacée*. Pretty little greenhouse shrubs, thriving in sandy loam and peat; and readily increased by cuttings, planted in sand, under a glass.

STENOCORYNE, *Lindley*. From *stenos*, narrow,

and *koryne*, a club. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. For culture, see *Maxillaria*.
Synonymes: 1, *Bifrenaria longicornis*.
longicornis 1. Or. spot. 4, S. Epi. 1 Demerara. 1843

STENOMÉSSON, *Herbert*. From *stenos*, narrow, and *messon*, middle; flowers. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. The members of this genus should be grown in a soil composed of peat and sandy loam, in equal proportions. When they are growing abundance of water should be given them, gradually withholding it and keeping them dry when in a state of rest. A stove temperature is necessary for some of the species, and that of the greenhouse for others. *Synonymes*: 1, *Chrysiphiola flava*; 2, *Sphaerotele coccinea*; 3, *Paneratium aurantiacum*; 4, *Chrysiphiola parviflora*. See *Sphaerotele*.

tomentosum White	. 5, S. Ev. S. 6 Jamaica	. 1822

STENOTÁPHRUM, *Kunth*. Meaning unexplained. *Linn.* 23, Or. 1, Nat. Or. *Graminaceæ*—*américum*, *complanatum*.

STEPHANIA, *Willdenow*. In honour of S. Stephan, once a professor at Moscow, died 1817. *Linn.* 6, Or. 1, Nat. Or. *Capparidaceæ*. Well worth cultivating, on account of the beauty of the flowers. It thrives in loam, peat, and sand, and cuttings of the young wood will root in sand, under a glass, in heat. *Synonyme*: 1, *Capparis paradoxa*, *Steriphoma paradoxum*, *cleomoides* 1 Yellow . 6, S. Ev. S. 3 Caraccas . 1823

STEPHANŌUS, *Thouars*. From *stephanos*, a crown, and *ototis*, eared, from the auricles of the staminal crown. *Linn.* 5, Or. 1, Nat. Or. *Asclepiadaceæ*. A genus of charming twiners;

S. floribunda is a delightful plant; both species are well adapted for planting out in the stove, or for cultivating in pots; they should be favoured with a brisk heat in the growing season, both to their roots and tops, and be potted in a mixture of turfy loam, and heath-mould, or leaf-mould. Increase is easily effected by cuttings in the usual way.

floribunda . . . White	. 5, S. Ev. Tw. 10 Madagas.	1839
Thouarsii . . . White	. 5, S. Ev. Tw. 10 E. Ind.	. 1842

STERCULIA, *Linn.* From *Sterculus*, a God, derived from *stercus*; the flowers and leaves of some of the species are fetid. *Linn.* 21, Or. 10, Nat. Or. *Sterculiaceæ*. These plants succeed best in light turfy loam; or a mixture of loam and peat; and cuttings of the ripened wood, with the leaves left entire, will root freely in sand, under a glass, in heat. The seeds of *S. acuminata* afford the *Cola* or *Kola* of tropical Africa, so much spoken of by African travellers; and which, when chewed or sucked, enhances the flavour of anything that may be eaten afterwards; and is even said to render putrid water agreeable. The seeds are brown, and about the size of a pigeon's egg. *Synonymes*: 1, *Cola acuminata*; 2, *Courtenia Afzelii*; 3, *S. heterophylla*, *Brachychiton diversifolia*; 4, *Helicteres apétala*; 5, *S. crinita*; 6, *S. Balanphas*, *Southwellia nobilis*; 7, *S. pubescens*.

STERCULIACEÆ, or **STERCULIADS**, are large trees or shrubs, natives of the warmer parts of the world. To this group belongs the Baobab tree (*Adansonia digitata*), the Silk-cotton tree (*Bombax Cœiba*), and the Durion tree (*Durio Zebethinus*), the fruit of which is highly esteemed. These may be named as examples of the character of the order.

STEREOCAULON, *Schreber*. From *stereos*, rigid, and *caulon*, a stem, firm branching fronds. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. This is the first of its tribe found clothing the lava of volcanoes—*botrydium*, *Cerolus*, *paschale*.

STEREOXYLON. See *Escallonia*.

STERIGMA, *De Candolle*. From *sterigma*, a fork; the larger stamens are joined at the base, and forked at the top. *Linn.* 15, Nat. Or. *Brassicaceæ*. The species of this genus are well adapted for ornamenting rock-work. They require to be treated as other alpine plants.

Synonymes: 1, *Cheiranthus tomentosus*; 2, *C. torulosus*.

acanthocarpum Yellow . 4, H. B. 1 Iberia . 1837
tomentosum 1. Yellow . 6, H. B. 1 Astracan 1823
torulosum 2 . Yellow . 6, H. B. 1 Iberia . 1823

STERILE, barren.

STERIPHOMA. See *Stephania*.

STERNÉCKIA. See *Singana*.

STERNÉRGIA, *Waldstein and Kitaibel*. In honour of Count Caspar Sternberg, a celebrated botanist. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. Handsome hardy bulbs, though seldom met with in ordinary collections. They succeed well with common treatment, in any rich garden soil, and are increased by offsets.

STERNUTATORY, possessing qualities which provoke sneezing.

STEVENIA, *Adanson*. In honour of Christian Stephen, Counsellor of the University of Moscow, and author of a paper on some new plants from Caucasus, published in the *Linnean Transactions*. *Linn.* 15, Nat. Or. *Brassicaceæ*. The seeds of these plants should be sown on rock-work, but not sooner than the beginning of April—*alyssoïdes*, *cheiranthoides*.

STEVIA, *Cavanilles*. In honour of Peter James Esteve, M.D., professor of botany at Valencia. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Pretty autumnal flowering plants, succeeding well in the flower border during summer; they require the protection of a frame in severe weather, and are increased by cuttings, divisions, or seeds. *Synonyme*: 1, *S. canescens*. See *Hymenopappus*, and *Palafolia*.

STEWARTIA, *Cavanilles*. In honour of John Stewart, Marquis of Bute, once a distinguished patron of botany. *Linn.* 16, Or. 8, Nat. Or. *Ternstroemiaceæ*. This beautiful genus deserves a place in every collection of ornamental shrubs. For culture and propagation, see *Malachodendron*. *Synonyme*: 1, *S. Malachodendron*; 2, *M. ovatum*.

pentagyna 2 . White . 6, H. De. T. 10 N. Amer. 1785
virginica 1 . White . 7, H. De. T. 10 N. Amer. 1743

STICTA, *Schreber*. From *stiktos*, dotted: in allusion to the little pits on the under surface of the fronds. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. A handsome genus of Lichens, found growing upon trees. *S. pulmonacea* possesses the same qualities as the Iceland moss of the shops—*aurata*, *ciliata*, *crocata*, *fuliginosa*, *limbata*, *macrophylla*, *pulmonacea*, *scrobiculata*, *sylvatica*.

STICTIS, *Persoon*. From *stiktos*, dotted; the dot-like appearance of many of the species. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. Very minute species, found on dead branches—*abietina*, *longa*, *pallida*, *radiata*, *sicciostoma*, *sphaeratis*, *versicolor*.

STIFFTIA, *Mikan*. Named after some unknown botanist. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A fine showy genus, requiring the same treatment as the shrubby species of *Baccharis*. *Synonymes*: 1, *Augusta grandiflora*, *Plazia braziliensis*.

chrysantha 1 Yellow . 4, S. Ev. S. 10 Brazil . 1840
insignis . . Red wht. 4, S. Ev. S. 10 Brazil . 1833

STIGMA, the female organ of a flower.

STIGMAPHYLLON, *Jussieu*. From *stigma*, a stigma, and *phyllon*, a leaf; stigma foliaceous. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. These handsome plants produce their fine yellow flowers, from three to five together, in an umbel. For culture and propagation, see *Banisteria*. *Synonyme*: 1, *Banisteria auriculata*; 2, *B. ciliata*.

STIGMATOSE, when the stigma is long, lateral, or on one side of the style.

STIGONEMA, *Agardh*. From *stigon*, dotted, and *nema*, a filament, alluding to the regular annular dots of the filaments. *Linn.* 24, Or. 7, Nat. Or. *Conferaceæ*. Small dark green tufts, found on rocks—*atrovirens*, *panniforme*.

STILAGO, *Linn.* From *stylos*, a style; probably alluding to its length. *Linn.* 22, Or. 3, Nat. Or. *Stilaginaceæ*. Ornamental trees, thriving in a mixture of sandy loam and peat; cuttings will root in sand, under a glass, in heat.

Binius . . Apetal . 8, S. Ev. T. 20 E. Ind. 1757
diandra . . Apetal . 8, S. Ev. T. 20 E. Ind. 1800

STILBACEÆ, or STILBIDS, are Cape shrubs resembling the *Phytica*, having a resinous secretion. Little is known of their uses.

STILBOSPORA, *Persoon*. From *stilbo*, to shine,

and *spora*, a sporule; the naked sporules are imbedded in a black substance, flowing from dead trunks and branches of trees. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceae*.—*betulina*, *biloculata*, *profusa*.

STILBUM, *Tode*. From *stilbos*, shining; the species are found upon old rotten wood, and are at first watery and gelatinous, but become opaque as they ripen. *Linn.* 24, Or. 9, Nat. Or., *Botrytaceae*—*anomalum*, *bicolor*, *citrinum*, *erythrocephalum*, *nigrum*, *pellucidum*, *piliforme*, *tomentosum*, *vulgare*.

STILLINGIA, *Gardener*. In honour of Dr. Benjamin Stillingfleet, an eminent English botanist. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceae*. The species of *Stillingia* should be grown in a mixture of sandy loam and peat; and cuttings will root in sand, under a glass, in heat. *S. sebifera* is the Tallow-tree of China; its kernel contains an oil, which, when expressed, consolidates through the cold to the consistence of tallow, and by boiling, it becomes as hard as bees-wax.

populnea . Yellow . 7, S. Ev. T. 15 Ceylon . 1823

STËKESIA, *L'Heritier*. In honour of Jonathan Stokes, M.D., the coadjutor of Withering, in his arrangement of British plants. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. A very handsome herbaceous plant, succeeding well in the open border during the summer months. It is increased by seeds or by division of the roots.
cyanea . . . Blue . 8, G. Her. P. 2 Carolina . 1766

STOLONIFEROUS, bearing runners which root at the joints.

STOLONS, runners, which root at the joints.

STOMACHIC, agreeable to the stomach.

STOMATA, or **STOMATE**. An organic aperture in the skin of a plant by means of which respiration is maintained.

STONECROP. See *Sedum*.

STONE-PINE. See *Pinus Pinea*.

STONE-WORTS. See *Chæra* and *Nitella*.

STORAX. See *Styrax*.

STORK'S BILL. See *Pelargonium*.

STRAMONIUM. See *Datura Stramonium*.

STRANGURY, a disease produced on plants by tight ligatures.

STRANVÆSIA. Lindley named this genus in honour of the Honourable William Fox Strangways, F.R.S., a learned and indefatigable investigator of the Flora of Europe. *Linn.* 12, Or. 2, Nat. Or. *Pomaceae*. This species is better known under the name of *Cratægus glauca*; it is ornamental, and succeeds best when planted against a south wall, with a slight protection in severe weather. It is readily increased by grafting or budding upon the common thorn. Synonyme: 1, *Cratægus glauca*.

glaucescens l White . 6, H. Ev. T. 20 Nepal . 1828

STRAPWORT. See *Corrigiola*.

STRATA, layers, beds.

STRATIOTES, *Linn.* From *stratos*, an army; in allusion to its long sword-like leaves. *Linn.* 22, Or. 10, Nat. Or. *Hydrocharidaceae*. An ornamental aquatic, increasing so fast in the ponds where it is planted as to become almost a troublesome weed.

alismoides . White . 7, S. Aq. P. 2 E. Ind. . 1806
aloides . . White . 6, H. Aq. P. 2 Eng., ditches.

STRAVADIUM, *Jussieu*. From *Tsjeria Samstravadi*, the Malabar name of one of the species. *Linn.* 16, Or. 8, Nat. Or. *Myrtaceae*. Fine ornamental trees. For culture and propagation, see *Barringtonia*. Synonymes: 1, *Bar-*

ringlōnia acutāngula, *Eugēnia acutāngula* ;

STRAWBERRY. See *Frāgaria*.

STRAWBERRY BLITE. See *Blitum*.

STRAWBERRY PEAR. See *Cactus triangularis*.

STRAWBERRY TREE. See *Arbutus*.

STREAKS, little furrowed lines.

STREBLORRHIZA. See *Chianthus*.

STRELITZIA. Named by Aiton in honour of the Queen of George III., from the house of Meeklenburgh-Strelitz. *Linn.* 5, Or. 1, Nat. Or. *Musaceæ*. A genus of splendid plants, generally found in our stoves, though they will thrive equally as well in the greenhouse. A very turfy loam suits them, and they may be increased slowly by suckers; but young specimens are more readily obtained by impregnating the stigma when the plants are in bloom.

STRİÆ, small streaks.

STRİARIA, Greville. From *stria*, a groove, the plant is marked with grooves. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. Found in the ocean—*attenuata*.

STRİATED, having streaks.

STRİCT, upright, straight.

STRİGÆ, little upright unequal, stiff hairs, swelled at their bases.

STRİGOSE, covered with strigæ.

STROBILANTHES, Blume. From *strobilos*, the cone of a pine, and *anthos*, a flower: the inflorescence in the bud state resembles the cone of a pine. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. This beautiful stove genus is well deserving of a place in every collection, on account of its very showy purple flowers, and the deep purple colour of the under side of the leaves. For culture and propagation, see *Ruellia*. *Synonyme*: 1, *Ruellia Sabiniāna*; 2, *Ruellia grandis*.

pennsylvanica.	. Brown 8, H. Her. P. 2	N. Amer. 1812

STRUTHIUM. See *Gypsophila Struthium*.

STRYCHNOS, Linn. The Greek name of the *Solanum*. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. Valuable plants, on account of the medicinal properties ascribed to them. They all succeed well in a mixture of loam and sandy peat, and half-ripened cuttings will root in sand, under a glass, in heat. *S. colubrina* is given as an antheimintic in intermitting fevers. The seeds of *S. Nax-vómica* are well known by the latter name, as possessing a dangerous narcotic property, which depends upon the presence of a peculiar principle called *Strychnia*. It has been administered in a great number of cases with different degrees of success: small quantities have been given for mania, gout, epilepsy, hysteria, and dysentery. It is a most violent poison, and its energy so great, that half a grain blown into the throat of a rabbit, occasions death in five minutes. Its operation is always accompanied with symptoms of locked jaw and other tetanic affections. The seeds of *S. potatidrum* are sold in the Indian bazaars for the purpose of clearing muddy water; the vessels containing the water being rubbed for a minute or two round the inside with one of the seeds; after which, by allowing the water to settle for a short time, however impure and

muddy it may have been before, it becomes clear and wholesome.

STRYCHNINE is the product of different species of *Strychnos*.

STUARTIA, Cavanille. See *Stewartia*.

STÛPA, filamentose matter.

STYLÁNDRA, Nuttall. From *stylos*, a column, and *aner*, a male; the gynostegium is pedicellate. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. For culture and propagation, see *Asclepias*. *Synonymes*: 1, *Podostigma pubescens*, *Asclepias pedicellata*.

pumila 1.	. Grn. yel. 7, F. Her. P. 4	N. Amer. 1824
-----------	-----------------------------	---------------

STYLE, the stalk which bears the stigma, and intervenes between that and the ovary.

STYLIADIACEÆ, or STYLEWORTS. A small order of herbaceous plants or undershrubs, chiefly found in the swamps of New Holland. They are curious plants and deserve cultivation.

STYLIDIUM, Swartz. From *stylos*, a column; the stamens and style are joined. *Linn.* 20, Or. 2, Nat. Or. *Styliadiaceæ*. Beautiful and rare little plants, succeeding best in sandy loam and peat. Cuttings of the shrubby kinds root very readily in sand, under a glass; a few of the herbaceous kinds are increased by divisions of the root, but chiefly by seeds. *Synonymes*: 1, *S. setigerum*; 2, *S. glandulosum*; 3, *S. mucronifolia*; 4, *Ventenatia minor*; 5, *S. longifolium*, *Dicksonii*; 6, *S. assimile*; 7, *S. laricifolium*.

STYPTIC, having the power to staunch blood.

STYRACÆÆ, or **STORAX**-WORTS. To this small order belongs the Gum-Storax tree (*Styrax officinale*), the Benzoin tree (*Styrax Benzoin*), and the Snow-drop tree (*Halesia tetraptera*), so common in our shrubberies.

STYRAX, *Linn.* A mere alteration of *Asshirak*, the Arabic name of *S. officinale*. *Linn.* 10, Or. 1, Nat. Or. *Styracaceæ*. The species of *Styrax* are very handsome when in flower, and are, therefore, well suited for ornamenting shrubberies. A light soil suits them best, and they are readily increased by layers, in spring or autumn. *S. officinale* is remarkable for producing the very powerful and fragrant balsam known by the name of storax: it is bitter and pungent to the taste, and possesses a strong, agreeable odour. *Synonyme*: 1, *S. glabrum*.

SUB, in composition, signifies somewhat; as *subumbellate*, somewhat umbellate, *sub-rotund*, somewhat round or roundish, &c.

SUBALATE, with a narrow wing, or margin.

SÜBER. See *Quercus Süber*.

SUBEROSE, corky.

SUBULARIA, *Linn.* From *subula*, an awl; shape of the leaves. *Linn.* 15, Nat. Or. *Brassicaceæ*. This little annual is very remarkable from expanding its flowers two or three feet under water, and impregnation taking place in that element. It only requires planting in a pond or rivulet, with a gravelly bottom; or it may be grown in pots filled with sand, and plunged in water.
aquatica . . . White . 7, H. Aq. A. ½ Brit. ponds.

SUBULATE, awl-shaped, tapering to a point.

SUCCEDANEUS, taking the place of another.

SUCCISA, *Vaillant*. From *succisus*, lopped; appearance of the roots. *Linn.* 4, Or. 1, Nat. Or. *Dipsacaceæ*. Plants of no great beauty, and of very common culture. *Synonymes*: 1, *Cephalaria albescens*; 2, *C. alpina*; 3, *C. attenuata*; 4, *C. coriacea*, *Lepicéphalus leucantha*; 5, *C. corniculata*; 6, *C. cretacea*; 7, *Scabidsa glabrata*; 8, *Scabidsa decurrens*, *Cephalaria graeca*; 9, *C. lævigata*, *Succisa centaureoides*; 10, *C. leucantha*; 11, *C. leucanthema*, *Lepicéphalus leucantha*; 12, *Scabidsa succisa*; 13, *Cephalaria rigida*; 14, *C. scabra*; 15, *C. syriaca*; 16, *C. tatarica*; 17, *C. transylvanica*; 18, *C. uralensis*. See *Cephalaria*, and *Scabidsa*.

SYÁGRUS, *Martius*. The first who wrote the history of the Trojan war in verse. *Linn.* 21, Or. 5, Nat. Or. *Palmaceae*. This palm succeeds in sandy loam and a moist heat; it is multiplied by seeds.

cocoides . . . Straw . . 6, S. Palm. 15 Brazil . 1823

SYCAMORE. See *Acer Pseudo-Platanus*.

SYCOMORE. See *Ficus sycomorus*.

SYMPHIANÐRA, *A. De Candolle*. From *Symphio*, to grow together, and *aner*, an anther; the anthers are connate. *Linn.* 5, Or. 1, Nat. Or. *Campanulaceæ*. For culture and propagation, see *Campanula*. *Synonyme*: 1, *Campanula pëndula*; 2, *Campanula armënia*.

pëndula 1. Cream . 7, H. B. 2 Caucasus 1823
armënia 2. Blue . . 6, H. Her. P. 2 Caucasus 1826

SYMPHORIA. See *Symphoricarpus*.

SYMPHORICARPUS, *Dillenius*. From *symporeo*, to accumulate, and *karpos*, fruit; in allusion to its clustered bunches of fruit. *Linn.* 5, Or. 1, Nat. Or. *Caprifoliaceæ*. The species of St. Peter's Wort are handsome dwarf shrubs, suitable for the fronts of ornamental shrubberies. They are readily increased by cuttings, planted in autumn or spring, or by suckers, which they throw up in abundance. *Synonymes*: 1, *Symphoria montana*; 2, *S. racemosa*; 3, *Lonicera Symphoricarpus*, *Symphoria glomerata*; 4, *Symphoria glomerata fol. variegatis*.

SYMPIEZA, *Lichtenstein*. From *sympiezo*, to press; in reference to the stamens, which adhere to the tube of the corolla. *Linn.* 4, Or. 1, Nat. Or. *Ericaceæ*. A pretty little plant, thriving in turf peat and sand; and readily increased by young cuttings, placed in sand, under a glass. *Synonyme*: 1, *Blæxia bracteata*.

capitellata 1 . Pink . 7, G. Ev. S. 1½ C. G. H. 1812

SYMPLOCARPUS, *Salisbury*. From *symploke*, connection, and *karpos*, fruit. *Linn.* 4, Or. 1, Nat. Or. *Orontiaceæ*. This is a curious species, bearing large, handsome leaves. It succeeds in a marshy situation, in peat soil; and is increased by division. The roots and seeds are powerful antispasmodics; they are also expectorant, and useful in phthisical coughs. *Synonymes*: 1, *Pothos fetidus*, *Dracontium fetidum*.

fetidus 1 . Apetal . 5, H. Aq. P. 1 N. Amer. 173

SÝPLOCOS, *Linn.* From *Symploke*, a connection; the stamens are united at the base. *Linn.* 18, Or. 2, Nat. Or. *Ebenaceæ*. These plants thrive well in a mixture of loam, peat, and sand; and cuttings root without difficulty in sand, under a glass; the stove species requiring heat. *Synonyme*: 1, *S. lœcida*.

TACAMAHACA. See *Calophyllum Tacamahaca*, *Feica Tacamahaca*, and *Populus balsamifera*.

TACCA, *Forster*. The Malay name of the species. *Linn.* 6, Or. 1, Nat. Or. *Taccaceæ*. Interesting plants, thriving well in a mixture of loam, peat, and sand; and readily increasing by division of the roots. They must be very sparingly watered whilst in a dormant state. The large fleshy roots, when scraped and frequently washed, yield a nutritive fecula resembling arrow-root. See *Arum*, and *Ataccia*.

aspera . . .	Brown . 7, S. BL P. 2	E. Ind. . 1816

TACCACEÆ, or TACCADS, are large perennial herbs, with tuberous roots, which contain a large quantity of fecula, which is prepared and used as food after the manner of sago.

TACCADA. See *Scævola Taccada*.

TACHIA, *Aublet*. From *Tachi*, which, it is said, signifies an ant's nest; a name applied in its native country to *T. Guianensis* on account of its trunk and branches being usually full of ants; this species, we believe, is not yet introduced to this country. *Linn.* 5, Or. 1, Nat. Or. *Gentianaceæ*. These plants will grow freely in a mixture of peat, sand, and loam; a small portion of the last will suffice; cuttings planted in sand, under a hand-glass, in heat, will strike root readily. The species are rather difficult to keep through the winter, in this country, on account of their being liable to damp off; and in order to prevent this, they should be very sparingly watered in damp weather. *Synonymes*: 1, *Lisianthus cordifolius*; 2, *L. longifolius*; 3, *L. exsertus*. See *Amorphophallus*.

cordifolia 1 . . .	Yellow . 5, S. Ev. S. 2	Jamaica. 1816

TÁGERA. See *Cassia Tägera*.

TÁGETES, Linn. From the beauty of its flowers, this genus is named after *Tages*, a Tuscan divinity. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A genus of elegant plants when in flower, and, therefore, well deserving a place in every garden. The annual species should be raised on a hotbed in spring, and planted out about the end of May. *T. patula* is the French marigold, and *T. erecta* is the African marigold of our gardens. The herbaceous kinds thrive in any rich, light soil; and may be increased by cuttings or divisions.

TAMAQUARINA. See *Tavernanmontana*.

TÁMARA. See *Nelumbium Támara*.

TAMARICACEÆ, or TAMARISKS, are small shrubs and herbs. *Tamarix mannifera* is stated to produce a kind of manna in the neighbourhood of Mount Sinai. The species chiefly grow in moderate climates.

TAMARIND-TREE. See *Tamarindus*.

TAMARÍNDUS, Linn. *Tamar*, in Arabic, is the name of the date, and *Indus*, Indian; *Indian-date*. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. The species of *Tamarind* thrive in a mixture of sandy loam and peat; and are readily increased by seeds, which are annually imported from the East and West Indies; they should be sown on a hotbed, and planted singly into pots, when about three inches high. Cuttings root readily in sand, under a glass, in heat.

The preserved pulp of the tamarind is well known as a delicious confection. *Synonyme* : 1, *T. officinatis*.

TAMARISK. See *Tamarix*.

TAMARIX, Linn. So named on account of the plants growing on the banks of the Tamaris, now Tambro, on the borders of the Pyrenees. *Linn.* 5, Or. 3, Nat. Or. *Tamaricaceæ*. This is a genus of very elegant shrubs. The hardy species is well suited for ornamenting shrubberies; it grows well in any soil or situation; and increases freely by cuttings, planted in the open ground, in spring or autumn. *T. orientalis* succeeds well in a mixture of loam and peat; and cuttings root readily in sand, under a glass, in heat. The bark of all the species is slightly bitter, astringent, and probably tonic. The manna of Mount Sinai is produced by a variety of *T. gallica*: it consists wholly of pure mucilaginous sugar. *Synonymes* : 1, *Myricaria dahurica*; 2, *T. articulata*. See *Myricaria*.

TAMONIA. See *Chitonia Tamonia*.

TÂMUS, Linn. A name applied by Columella to a plant resembling a vine. *Linn.* 22, Or. 6, Nat. Or. *Dioscoridaceæ*. Hardy twining plants, of no interest, succeeding in common garden soil; division of the roots—*communis*, *crética*. See *Testudinaria*.

TANACETUM, Linn. Said to be altered from *Athanasia*. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. The species of *Tanacetum* or *Tansy* are not possessed of much beauty. The hardy kinds succeed in any common soil; and are readily increased by division. The greenhouse species should be grown in a light, rich soil. They increase freely by cuttings. Withering asserts, that if meat be rubbed with the leaves of *tansy*, the flesh-fly will not touch it. *Synonymes* : 1, *Achillea filipendula*; 2, *A. bipinnata*. See *Balsamita*, and *Pentzia*.

TANAHOU. See *Poinciana regia*.

TANEKHA. See *Phylloladus rhomboidalis*.

TANGHINIA, Du Petit Thouars. From *Tanghin*, the Madagascar name of *T. veneniflua*, the seed of which is the ordeal nut of that island. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. These remarkable plants may be referred to *Tabernaemontana* for culture and propagation. *T. veneniflua* is the celebrated ordeal tree of Madagascar. The fruit is yellow; and incloses a fibrous stone or nut; the kernel inclosed in this stone, or nut, is said by some to be the part used for the ordeal, and to be infused in a liquid of which the accused person is made to drink; others say the infusion is made of the entire fruit. The custom of administering *Tanghin* as an ordeal, in Madagascar, has recently become far more universal than at any former period of the Huwa government. When her late Majesty, in the beginning of 1830, came to the resolution of cleansing her lands from sorcerers, an ordeal was commanded in every town and village; and in Tannanarivoo scarcely any class of the inhabitants escaped. On the 9th of May, 1830, in compliance with the sovereign's mandate, a notable administration of Tanghin took place. The accused persons amounted to about thirty, including some of the highest rank in the kingdom. All the nobility recovered, while the unknown plebeians, who, according to the common jugglery, had been compelled to drink with them, died. The former made the usual triumphant entry into the town, on the 17th, borne in open palanquins, amongst the shouting, dancing, and grimaces of the many thousands of people. In the following month, about an equal number of Malagassy ladies submitted to the same ordeal; but all survived, and, in due course, made a grand entry into the town. The Tanghin is administered in private, as well as in public. A subject so deeply rooted in the minds of all the Malagassy people, from the sovereign down to the slave, is the belief in witchcraft; and so blindly are they led on by this belief, that a whole nation may be considered as labouring under a spell, as powerful as the fascination which they attribute to the unfortunate sorcerers themselves. *Synonymes* : 1, *Cerbera dichotoma*; 2, *C. laurifolia*; 3, *C. lactaria*; 4, *C. Odollam*; 5, *C. Tanghin*.

TAXACEE, TAXADS or YEWs. Are well-known trees and shrubs; the common Yew (*Taxus baccata*) may be given as an example of the order.

TAXÁNTHEMA. See *Státice*.

TAXÓDIUM, Richard. From *taxus*, the yew, and *eidos*, like; trees resembling the yew. *Linn.* 21, Or. 8, Nat. Or. *Pinaceae*. Ornamental, lofty-growing trees, well suited for planting singly on lawns. They grow best in a rich moist soil; and are readily increased by seeds, layers, or by cuttings, with the leaves left whole, placed in a vessel of water, where they will root in a few weeks. The *Deciduous Cypress* is universally employed, throughout the United States, for making the best kind of shingles; and in Louisiana it is used for almost every other purpose to which timber is applied. *Synonymes*: 1, *Schubertia capensis*; 2, *S. disticha*; 3, *S. d. pendula*; 4, *T. sinense pendulum*; 5, *T. sinense*. See *Schubertia*.

TÁXUS, Linn. From *toxon*, a bow; being formerly used in making them; or from *taxis*, arrangement; the leaves are arranged on the branches like the teeth of a comb. Yew is supposed to be from the Celtic word *ivo*, signifying verdure; alluding to the yew being an evergreen. *Linn.* 22, Or. 13, Nat. Or. *Taxaceae*. Ornamental trees, well adapted for underwood, as they thrive under the shade and drip of other trees; they are also very ornamental when planted to form hedges. They will grow in any moist soil, but succeed best in loams and clays. They are chiefly propagated from seeds, which should be sown as soon as ripe; they may also be increased by cuttings, formed of either one or two years' wood, and planted in a shady border in the beginning of April or end of August. *Synonymes*: 1, *T. fastigiata hibernica*, *T. baccata hibernica*. See *Podocarpus*, *Cephalotaxus*, and *Torreya*.

TELÓPEA, *R. Brown*. From *Telopos*, seen at a distance; alluding to the great distance from which its crimson-coloured blossoms are discernible in its native country. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. This magnificent plant is considered to be rather difficult of culture. A light soil, composed of equal parts of sandy loam and heath mould, with a good proportion of sand and gritstone, well incorporated, appears to suit it best. The pot in which it is grown must be well drained; and in watering, care must be taken never to allow the plant to flag, nor yet to over-water it. Though it requires very little water in the winter season, it must have a good supply in the summer months, particularly while growing freely. It should always be kept in a light, airy part of the house. It may be propagated by cuttings, in sand, under a glass; but young plants may be obtained readier, and with greater certainty, by layers; as the plants naturally produce an abundance of suckers, which may be easily laid down into small pots, introduced round the one in which the plant is growing. In summer, the *Warratah* succeeds well in an airy part of the greenhouse, but in winter, it subsists better in a cool, airy part of the stove.

speciosissima . . Scarlet 6, G. Ev. T. 12 N. S. W. 1789

TEMPLETÓNIA, *R. Brown*. In honour of Mr. John Templeton, of Orange Grove, near Belfast, an excellent botanist. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. Interesting plants, thriving well in a mixture of sandy loam and peat; and increased by young cuttings, in sand, under a glass.

TEREBÍNTHUS. See *Pistachia Terebintus*.

TEREBINTHINATE, consisting of turpentine.

TERETE, round and long, like a taper.

TERGEMINATE, three-paired.

TERMINAL, ending, bounding.

TERMINÁLIA, *Linn.* The leaves are in bunches at the ends of the branches; hence the name, from *terminus*, end. *Linn.* 23, Or. 1, Nat. Or. *Combretææ*. Interesting plants. For culture and propagation, see *Bucida*. The fruit and bark of several of the species are astringent and tonic. The fruit and galls of *T. Chebula* are highly valued by dyers, creating, when mixed with alum, a durable yellow. The bark and leaves of *T. Catappa* yield a black pigment, with which Indian ink is made. A milky juice is said to flow from *T. angustifolia*, which, when dried, is fragrant, and resembling Benzoin is used as a kind of incense in the churches in the Mauritius. *Synonymes*: 1, *T. Benzoin*; 2, *T. rotata*, *T. Myrobálana*; 3, *T. subcordata*; 4, *T. madagascariensis*, *Myrobálanus Patræa*.

TERN, in threes, or three in a whorl.

TERNARY, consisting of threes.

TERNATE, applied to a leaf consisting of three leaflets.

TERNÁTEA. See *Chlidia Ternatea*.

TERNSTRÖMIA, *Mutis*. In honour of Ternström, a Swedish naturalist and traveller, who died at Palicandre, in 1745. *Linn.* 13, Or. 1, Nat. Or. *Ternströmiææ*. Interesting plants, succeeding in loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat.

TERNSTRÖMIÆÆ, or HEADS and CAMELLIAS. For the beauty of many of the species of this order, the plants are highly esteemed. The tea-tree (*Thea*) and *Camellia* may be taken as examples.

TERPNÁNTHUS. See *Spiranthera*.

TERRA-JAPONICA. See *Ancari Gambier*.

TERRA-ORELLANA. See *Bixa Orellana*.

TESSELATED, variegated by squares, chequered.

TESTA, the skin or integument of a seed.

TESTACEOUS, light brown.

TESTUDINÁRIA, *Salisbury*. From *testudo*, a tortoise; resemblance of the outside roots. *Linn.* 22, Or. 6, Nat. Or. *Dioscoridiææ*. Curious and interesting plants, succeeding well in turfy loam and peat. They should be kept dry when

not growing. Roots are frequently received from the Cape of Good Hope. The plants being diœciois, there is no chance of obtaining seeds in this country, unless specimens of both sexes should happen to flower at the same time. *Synonyme*: 1, *Tamus elephântipes*.

elephântipes 1 . . . Yel. 7, G. De. Cl. 10 C. G. H. 1774
mexicana . . . Yel. 7, G. De. Cl. 6 Mexico

TÊTA. See *Peliosânthes Têta*.

TETANUS, lockjaw.

TETRÁCERA, *Linn.* From *tetra*, four-fold, and *keras*, a horn; the four capsules are recurved like as many horns. *Linn.* 22, Or. 12, Nat. Or. *Dilleniaceæ*. These handsome climbers are well suited for covering rafters or pillars in stoves. They succeed well in turfy loam and peat; and cuttings of the ripened wood root freely in sand, under a glass, in heat. *Synonyme*: 1, *Dillenia scândens*. See *Delima*, and *Doliciarpus*.

TETRACHÔTOMOUS, a stem that ramifies in fours.

TETRADËNIA, *Nees*. From *tetra*, four, and *aden*, a gland. *Linn.* 22, Or. 8, Nat. Or. *Lauraceæ*. A neat growing plant, requiring in every respect the same treatment as *Cinnamônum*. *Synonyme*: 1, *Laurus involu-crata*.

involuerata . Grn. yel. 1, S. Ev. S. 20 E. Ind. 1820

TETRADIUM, *Loureiro*. From *tetradion*, quaternary; parts of flowers and fruit in fours. *Linn.* 22, Or. 4, Nat. Or. *Connaraceæ*. For culture and propagation, see *Brucea*. *Synonyme*: 1, *Brucea trichôtoma*.

trichôtomum 1 White 6, S. Ev. T. 15 Chn. China 1820

TETRAGONAL, having four angles.

TETRAGONIA, *Linn.* From *tetra*, four, and *gonia*, an angle; in allusion to the fruit being four angled. *Linn.* 12, Or. 2, Nat. Or. *Tetragoniaceæ*. Plants not worth cultivating, except in general collections. *T. expansa* has been used as a substitute for spinach—*cristallina*, *decumbens*, *echinata*, *expansa*, *fruticosa*, *herbacea*, *linearis*, *obovata*, *spicata*, *Tetrayteris*.

TETRAGONIACEÆ, or AIZOONS. Are an order of succulent plants of no great beauty, and nearly related to *Mesembryaceæ*. *Tetragonia* is well known in our gardens under the name of New Zealand spinach.

TETRAGONÔLOBUS, *Scopoli*. The legumes are furnished with four wings or angles; whence the name, from *tetra*, four, *gonia*, an angle, and *lobos*, a pod. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Ornamental plants, succeeding in common garden soil; and increased by seeds. The perennial kinds are well adapted for ornamenting rock-work, and the annual kinds for flower borders. *Synonymes*: 1, *Lôtus conjugatus*, *biflorus*; 2, *L. conjugatus*; 3, *L.*

Tetragonôlobus; 4, *L. Requieni*; 5, *L. siliquodusus*.

TETRAGONOTHËCA, *Dillwyn*. From *tetragonos*, quadrangular, and *theca*, case; the four-angled grains. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An interesting plant, growing well in any rich light soil; and increased by divisions or seeds.

helianthoides Yellow 8, H. Her. P. 2 Virgin. . 1726

TETRAGYNOUS, having four styles.

TETRÂHIT. See *Galeopsis Tetrâhit*.

TÉTRALIX. See *Erica Tétralix*.

TETRAMËRIUM. See *Coffea*.

TETRAMËRIUM. See *Paramea*.

TETRAMICRA, *Lindley*. See *Brassavola elegans*.

TETRANDROUS, having four stamens.

TETRANËMA, *Benth.* From *tetra*, four, and *nema*, filament; on account of there being but four filaments in this genus, whilst the neighbouring genus, *Pentstemon*, has five. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. A very pretty dwarf greenhouse plant, producing a profusion of little corymbs of showy purple and white flowers, which rise up from among the leaves on long purple scapes. It requires a warm greenhouse in winter; and in spring it should be potted in leaf-mould and sandy loam, and placed in the greenhouse, where it will flower the greater part of the summer; it is readily propagated by seed or cuttings. *Synonyme*: 1, *Pentstemon mexicanus*.

mexicana 1 . . . Pur. wht. 6, G. Ev. S. 1 Mexico 1843

TETRANTHËRA, *Jacquin*. From *tetra*, four, and *aner*, an anther. *Linn.* 9, Or. 1, Nat. Or. *Lauraceæ*. Ornamental plants, requiring to be grown in a mixture of turfy loam, peat, and sand, and ripened cuttings root readily in sand, under a glass, in heat. *Synonymes*: 1, *Litsea citrifolia*; 2, *L. Cervantesii*; 3, *L. glaucescens*; 4, *L. japonica*, *Tomax japonica*, *T. monopetala*; 5, *L. chinensis*; 6, *T. involu-crata*; 7, *zeylanica*.

TETRÂNTHEUS, *Swartz*. From *tetra*, four, and *anthos*, a flower. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A pretty plant, thriving in sandy loam; and readily increased by division.

littoralis . . . White . 8, S. Ev. Cr. 1 W. Ind. 1820

TETRAPÉLTIS, *Wallich*. From *tetra*, four, and *pelte*, a buckler; the pollen masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is an interesting and highly fragrant species. For culture and propagation, see *Calogyne*.

fragrans . . . White . 6, S. Epi. 1 E. Ind. . 1836

TETRAPÉTALOUS, having four petals.

TÉTAPHIS, *Hedwig*. From *tetra*, four, in allusion to the teeth of the peristome being in fours. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. Broad tufts, found on dry banks. *Synonymes*: 1, *T. ovata*, *Grönwallia Browniana*—*Browniana* 1, *pellucida*.

TETRAPŒGON, *Desfontaines*. From *tetra*, four, and *pogon*, a beard. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A curious hardy annual species, of common culture.

villosus . . . *Apetal* . 7, H. Grass 1 Barbary . 1818

TETRAPŒMA, *Turcz.* From *tetra*, four, and *poma*, a cover; the capsule is four valved. *Linn.* 15, Or. 1, Nat. Or. *Brassicaceæ*.

barbareafolia . *Yel.* 6, H. B. 3 Siberia . 1835

TETRAPŒGON, *Cavanilles*. From *tetra*, four, and *pteron*, a wing; the carpels are each four winged. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. Interesting plants, seldom seen in blossom. For culture and propagation, see *Malpighia*. *Synonymes*: 1, *Triopteris buxifolia*; 2, *T. citrifolia*.

TETRAQUÉTROUS, having four angles or sides.

TETRASEPÁLOUS, having four sepals.

TETRATHÉCA, *Smith*. From *tetra*, four, and *theca*, a cell; alluding to the anthers being four-celled. *Linn.* 8, Or. 1, Nat. Or. *Tremandraceæ*. A genus of very pretty undershrubs, rather difficult to cultivate. A mixture of loam, peat, and sand, in equal parts, seems to suit them best; and cuttings of the young wood root in sand, under a glass. See *Tremandra*. *Synonymes*: 1, *Tremandra Hügelii*, *T. nasuta*, *T. verticillata*.

TEUCRIUM, *Linn.* Named after Teucer, son of

Scamander, and father-in-law of Dardanus, king of Troy. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Interesting plants, of very easy culture. The perennial herbaceous kinds succeed well in common garden soil; and are readily increased by division and by seeds.

Most of the shrubby kinds require the protection of a frame or greenhouse in winter; they are easily increased by young cuttings. The seeds of the annual species only require to be sown in the open border in spring. *Synonymes*: 1, *Scutellaria cretica*; 2, *T. orchideum*; 3, *T. latifolium*; 4, *T. supinum*; 5, *T. capitatum*, *flavum*; 6, *T. aureum*; 7, *T. pseudo-hyssopus*; 8, *T. orchideum*. THALLUS. The cellular mass of which the lower cryptogamous plants are entirely composed.

THÁMNEA, *Brongniart*. From *thamnos*, a shrub. *Linn.* 5, Or. 1, Nat. Or. *Bruniaceæ*. A pretty little green-house plant, thriving in a mixture of peat and sand, and propagated by cuttings of the young wood planted in sand under a glass.
uniflora . . . White . 4, G. Ev. S. 1 C. G. H. . 1810

THAMNÍDIUM, *Link.* From *thamnos*, a twig; the appearance of the plant when under the microscope. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceæ*. A minute plant found on putrid substances—*Elegans*.

THAMNOCHÓRTUS, *Bergius*. From *thamnos*, a shrub, and *chortos*, grass; habit of the plant. *Linn.* 22, Or. 3, Nat. Or. *Restiaceæ*. This genus succeeds well in sandy peat; and is readily increased by division. *Synonyme*: 1, *Restio dichotomus*.

dichotomus 1 . . . Apetal 6, G. Her. P. 2 C. G. H. 1817
scariosus . . . Brown 6, G. Her. P. 2 C. G. H. 1821

THÁPZIA, *Tournefort*. So named from the first species being discovered in the Isle of Thapsus. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. These plants will grow in any common soil. They can only be increased by seeds, which should be sown in autumn as soon as ripe. *Synonymes*: 1, *Laserpitium gummiferum*; 2, *L. thapsoides*.

THÁPZIUM, *Nuttall*. From the Isle of Thapsus, which gave the name to the *Thápsia* of the ancients; in allusion to its affinity with that genus. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. These plants will grow in any common soil, and are readily increased by divisions or seeds. *Synonyms*: 1, *Ligusticum actæifolium*; 2, *Thápsia trifoliata*.

actæifolium 1 . . . White 6, H. Her. P. 2 Canada . 1810
atropurpureum . . . Pur. . 6, H. Her. P. 2 Carolina. 1810
barbinode 2 . . . Yel. . 6, H. Her. P. 2 Philadel. 1700

THÁPZUS. See *Verbascum Thápsus*.
THEA, *Linn.* Derived from *Tcha*, the Chinese name for tea. *Linn.* 16, Or. 8, Nat. Or. *Ternstroemiaceæ*. For the culture and propagation of these valuable plants, see *Camellia*. They only require to be protected from severe frost.
 "Mr. Fortune has proved that the Chinese manufacture black and green tea from the same plant; and it is now generally agreed that the

two supposed species, *T. Bohea* and *T. viridis*, are nothing more than varieties of one species, for which Linnaeus' name *T. chinensis* is adopted, and of which the Assam tea plant, sometimes called *Thea assamica*, is merely a third variety, or perhaps, indeed, the wild type. The black and green teas are, however, mainly the growth of different districts of China, but the two kinds may be produced in either district, the difference being caused solely by the diverse methods of preparation."

Dr. Edward Smith, the most recent investigator of the action of tea, sums up its action thus:—"It increases the assimilation of food, both of the flesh and heat-forming kinds; and with abundance of food it must promote nutrition, whilst in the absence of sufficient food it increases the waste of the body."

Bohea 1 . . . White . 10, G. Ev. S. 4 China . 1768
latifolia . . . White . all G. Ev. S. 4 China . 1825
viridis 2 . . . White . 6, G. Ev. S. 4 China . 1768

THECE, the cases that contain the sporules of cryptogamic plants.

THÉCAPHORE, an elongated receptacle, which bears the ovary only, but not the petals nor stamens.

THEET-TSEE, or **ZIT-SI**. See *Melanorrhæa usitatissima*.

THEEZAN TEA. See *Rhâmrus Thezans*.

THELEBOLUS, *Tode*. From *thèle*, a nipple, and *boleo*, to eject. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdaceæ*. This species is found on cowdung, after rain, in June and July—*stercoreus*.

THELÉPHORA, *Ehrhart*. From *thèle*, a nipple, and *phoreo*, to bear; in allusion to the papillose surface of all the species. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. The species of *Theléphora* are common upon old roots and branches of trees. *Synonymes*: 1, *Himantia cándida*; 2, *Auricularia nicotiana*—*acerina*, *avellaneæ*, *biennis*, *byssoides*, *cálcea*, *carbönaria*, *caryophyllæa*, *cinérea*, *cómedens*, *córium*, *coryléa*, *doméstica*, *élegans*, *epidérmea*, *fraxinéa*, *fúsca*, *gigantæa*, *granulôsa*, *hepática*, *hirsûta*, *incarnata*, *incrûstans*, *intybacea*, *lacinia*, *lâctea* 1, *lactescens*, *Lauro-cérasi*, *livida*, *miniata*, *nûda*, *ochracea*, *ochroleuca*, *Padi*, *pannôsa*, *purpurea*, *puteana*, *quercina*, *radiata*, *r. rimôsa*, *rosea*, *rubiginôsa*, *Sambûci*, *sanguinolénta*, *sínuans*, *spadicea*, *tabacina* 2, *terréstris*, *Tiliæ*, *viscosa*.

THELOTREMA, *Acharius*. From *thèle*, a nipple, and *trema*, orifice; the protuberances of the thallus are perforated. *Linn.* 24, Or. 8, Nat. Or. *Graphidaceæ*. These plants are found on the bark of trees—*ecanthemáticum*, *Hutchinsonia*, *hyménium*, *lepadinum*, *melaleucum*, *variolarioides*, *v. agelæum*.

THELYGONUM, from *thelys*, woman, and *gonu*, a knee; supposed resemblance in the joints. *Linn.* 21, Or. 9, Nat. Or. *Chenopodiaceæ*. Common garden soil suits this species; seeds—*cynocrámbe*.

THELYMITRA. Forster, who named the genus, is said to have derived it from *thelys*, woman, and *mitra*, a cap. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a tuberous-rooted

genus, requiring precisely the same treatment as *Diasa*.

THELYPTERIS. See *Aspidium Thelypteris*.

THENÁRDIA. Kunth named this genus in honour of his friend, L. J. Thenard, a Frenchman, who has written on the chemical physiology of plants. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. An interesting plant. For culture and propagation, see *Echites*.

floribunda . Blue . 6, S. Ev. Tw. 10 Mexico 1823

THEOBROMA, *Linn.* From *theos*, god, and *broma*, food; celestial food. *Linn.* 18, Or. 1, Nat. Or. *Sterculiaceæ*. The species of *Theobroma*, or chocolate-nut, grow well in a mixture of loam and peat; and cuttings root readily in sand, under a glass, in heat. Seeds do not retain their vegetative power for a great length of time. The seeds of *T. Cacao* furnish the chocolate of the shops. The seeds are very nourishing and agreeable to most people, and are, therefore, kept in the majority of the houses in America as a necessary part of the provisions of the family. See *Guazuma*.

THEOPHRÁSTA, *Linn.* Named after *Theophrastus*, the father of natural history. *Linn.* 5, Or. 1, Nat. Or. *Myrsinaceæ*. A small, handsome tree, with a tuft of long, evergreen branches at the top of its simple stem, something like a palm-tree. It is well worth cultivating, on account of its long, holly-like leaves. A mixture of peat, loam, and sand, suits it best; and cuttings, with the leaves entire, root readily in sand, under a glass, in heat. Bread is said to be prepared from the pounded seeds of this tree in St. Domingo, where it is called *Le Petit Coco*. See *Clavijs*.

Jussieui . White . 7, S. Ev. T. 3 St. Domingo 1813

THERËSIA, *Koch*. Meaning not explained by author. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. For culture and increase of this species, refer to *Fritillaria*.

pérsica . Pa. pink . 6, F. Bl. P. 2 Mt. Ararat . 1840

THERMÓPSIS, *R. Brown*. From *thermos*, a lupine, and *opsis*, resemblance; because of the resemblance of the species to lupines. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. The species of *Thermopsis* are very elegant, but rather difficult to preserve. They succeed best in a light, rich soil; and the safest way of increasing them is by seed; for when the plants are separated at the roots they are very liable to suffer.

Synonymes: 1, *Anagallis barbata*; 2, *Podalyria alpina*, *Sophora alpina*; 3, *S. fabacea*, *T. rhombifolia*; 4, *T. Lupinoides*, *P. lupinoides*. See *Anagallis*.

THOMSONIA, *Wallich*. In honour of Dr. A. Thomson, author of an introduction to Botany. *Linn.* 21, Or. 7, Nat. Or. *Araceæ*. For cultivation, see *Caladium*.

guineensis . Yel. brn. 3, S. Her. P. 1½ Guinea. 182

THORA. See *Ranunculus Thora*.

THORN APPLE. See *Datura*.

THOROUGH WAX. See *Bupleurum rotundifolium*.

THOUÍNIA, *Poiteau*. In honour of André Thouin, a distinguished professor of Agriculture in the Jardin des Plantes of Paris; died in 1820. *Linn.* 8, Or. 1, Nat. Or. *Sapindaceæ*. This shrub grows well in a mixture of sandy loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat. *pinnata* . . White 6, S. Ev. S. 6 N. Spain. 182

THREADS, long hairs like threads.

THRIFT. See *Statice*.

THRINAX, *Linn.* From *thrinax*, a fan; form of the leaves. *Linn.* 6, Or. 1, Nat. Or. *Palmaceæ*. This species succeeds in turfy loam, and is increased by seeds.

parviflora . Wht. grn. 5, S. Palm. 15 Jamaica. 177

THRÍNICA, *Roth*. From *thrigkos*, battlement the seed crown of the marginal florets. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Uninteresting plants, succeeding in common garden soil and increased by seeds. *Synonymes*: 1, *Hyoseris hispida*; 2, *Apargia tuberosa*, *Leontodon tuberosus*, *Thrinica pruinosa*—*hirta*, *hispida*.

maroccana 1, *tuberosa* 2.

THROAT, the orifice of a flower.

THROATWORT. See *Campánula Cervicaria*.

THROATWORT. See *Campánula Trachelium*.

THROATWORT. See *Trachelium*.

THRYÁLLIS, *Linn.* A name given by the Greeks to *Verbascum*, which is derived from *thrauo* to break; however, the present plant has nothing to do with the plant of the Greeks except in having yellow flowers. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. This plant succeeds in a mixture of loam and peat; and ripened cuttings root in sand, under a glass in heat.

brachystachys . Yel. 8, S. Ev. Cl. 6 Rio Jan. 182

THÚA, *Linn.* From *thyon*, a sacrifice; the resin of the Eastern variety is used instead of incense at sacrifices. Why it is called *Arbo Vita* is not known, unless it be on account of the supposed medicinal qualities of its berries. In the East, the cypress is called the tree of life; and its berries are considered a cure for

all diseases. *Linn.* 21, Or. 10, Nat. Or. *Pinnaceae*. In Britain the species of *Arbor Vitæ* can only be considered as ornamental, low shrubs or trees, well deserving of being cultivated, especially *T. pëndula*; which, on account of its very graceful, long, slender, pendulous shoots, ought to be in every collection. The American and European kinds succeed well in any soil or situation, but prefer low, sheltered, and swampy places. The more tender species, natives of China, require, when young, the protection of the greenhouse. They are all readily increased by seeds, either imported from the places of their natural growth, or gathered from the trees in this country; some of the rarer kinds, as *T. pëndula*, are propagated by cuttings. *Synonymes*: 1, *Libocèdus chilensis*; 2, *L. chilensis*; 3, *T. pyramidalis*; 4, *T. tatarica*; 5, *L. tetragona*; 6, *T. Menziesii*, *T. Craigiana*, *Libocèdus decurrens*. See *Cupressus*, *Biota*, *Cálitris*, *Frenèla*, *Libocèdus*, and *Widdringtonia*.

THYMBA, *Linn.* *Thymbra* is the Greek name of a sweet-scented herb. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. This genus is well adapted for rock-work, or growing in pots among alpine plants. A gravelly soil suits it best, and it is readily increased by young cuttings or seeds. *Synonyme*: 1, *T. verticillata*.

cihiata	Violet 6, F. Ev. S. 1½	S. Eur.	1824
spicata 1	Pa pur. 6, F. Ev. S. 1½	Levant	1699

THYMBA. See *Satureja Thymbra*.

THYME. See *Thymus*.

THYMELEACEÆ, or **DAPHNADS**. The Mezereon (*Daphne Mezereum*) and Spurge laurel (*Daphne Laureola*) are two types of the habits of the order; the bark of all the species is so caustic, that, if chewed, it causes excessive pain. They all deserve cultivation.

THYMUS, *Linn.* From *thumos*, courage, strength, the smell of thyme being reviving; or from *thuo*, to perfume, being formerly used for incense in the temples. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Well-known under shrubs or herbs, preferring an exposed situation, and a dry, light, sandy soil. They are of very easy culture, and may be increased with facility either by divisions, slips, cuttings, or by seeds sown in March or April. Some of the rarer species may be grown in pots among alpine plants, and protected in winter. The different purposes to which Thyme is applied are so well known, as not to require any notice here. *Synonymes*: 1, *T. aciculàris*, *odoratissimus*, *Zygis*; 2, *T. crèticus*, *marinòsci*, *Satureia capitata*; 3, *Thymbra ciliata*; 4, *Thymus Marschallianus*; 5, *T. exsèrens*; 6, *T. citriodòrus*; 7, *T. lanuginòsus*; 8, *T. montànus*, *nummularius*; 9, *T. colimius*. See *Acyos*, *Calamintha*, *Méntha*, *Melissa*, *Micromèria*, *Népeta*, and *Pycnanthemum*.

TILE ROOT. See *Geissorhiza*.

TILIA, *Linn*. The etymology of this word is entirely unknown; in Dutch it is called *Linden*, in Anglo-Saxon *Lind*, and in English *Lime-tree*. *Linn*. 13, Or. 1, Nat. Or. *Tiliaceæ*. Ornamental, lofty-growing trees, well suited for avenues and parks. They thrive well in any soil, and are increased by layers or seeds if by layers, the tree must be cut down close to the ground, and from its roots a great number of shoots are produced, in the following year; these will be strong enough to lay down the following autumn. Trees raised from seed are far preferable to those raised from layers. The Russian bass-mats are made from the inner bark of the lime-tree; while the wood from its being light and white, is much used by the carver, and musical instrument-maker.

scabra . . .	Pa. blue. 6, G. Ev. S.	. 3	Mortn. B.	1830

TORÉNIA. See *Vandellia*.

TÓRILIS, Sprengel. Not explained. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. The seed of these plants may be sown in the open ground. *Synonymes*: 1, *Caucalis Anthriscus*; 2, *C. arvensis*, *helvética*; 3, *Scândix trichosperma*—*anthriscus* 1, *infesta* 2, *neglecta*, *nodosa*, *trichosperma* 3, *tuberculata*.

TORMENTÍLLA, Linn. From *tormentum*, pain; alluding to its supposed efficacy in tooth-ache, as well as to its being supposed to cure diseases of the bowels. *Linn.* 12, Or. 3, Nat. Or. *Rosaceæ*. British herbaceous plants, not worth growing, except in botanical gardens. The roots of *T. erecta* are so astringent as to be used in the western isles of Scotland for tanning leather; for which purpose they are superior to oak bark. The root is likewise one of the most efficacious of our indigenous aromatic astringents, and may be used with great effect in cases where medicines of this class are proper. It is usually given in decoction.

Synonymes: 1, *T. officinalis*; 2, *Potentilla humifusa*—*erecta* 1, *humifusa* 2, *réptans*. **TOROSE**, uneven, alternately elevated and depressed.

TORRÊTA, Arnott. In honour of Dr. John Torrey, author of "American Flora." *Linn.* 22, Or. 13, Nat. Or. *Taxaceæ*. *T. taxifolia* is usually known as the Stinking Cedar, on account of its unpleasant smell when burnt. The treatment same as *Táxus*. *Synonyme*: 1, *Táxus montana*.

Humboldtii . . .	Apetal 4, H. Ev. T.	30 Mexico	. 1848
myristica . . .	Apetal 4, H. Ev. T.	30 Californ.	1851
nucifera . . .	Apetal 4, H. Ev. T.	25 Japan	. . .

TÔRTULA, Hedwig. From *torqueo*, to twist; in allusion to the singular manner in which the teeth of the peristome are twisted together. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. Small plants, generally found in thick tufts. They are common to nearly all situations. The character from which the genus has received its designation will always faithfully indicate the species. *Synonymes*: 1, *Zigotrichia cylindrica*; 2, *T. rigida*; 3, *T. imberbis*, *unguiculata*; 4, *T. nervosa*; 5, *T. apiculata*, *aristata*, *barbata*, *humilis*, *mucronulata*—*brevirostris*, *convoluta*, *cuneifolia*, *cylindrica* 1, *enervis* 2, *fallax* 3, *f. brevicaulis*, *linoides*, *gracilis*, *viridis*, *muralis*, *m. brevipila*, *revoluta* 4, *rigida*, *rutilis*, *r. lævipila*, *stellata*, *subulata*, *s. obtusa*, *tortuosa*, *unguiculata* 5.

TÓRULA, Persoon. A diminutive of *torus*, a twisted cord; appearance of the filaments. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Found upon dead stems of plants—*cylindrica*, *Eriophori*, *herbarum*, *monilioides*, *ovalispora*. See *Stréptium*.

TORULOSE, slightly torose.

TORUS, the same as *Thalamus*.

TOUCH-ME-NOT. See *Impatiens*.

TOURNEFORTIA, Linn. In memory of Joseph Pitton de Tournefort, the distinguished author of an arrangement of plants under the title of "*Institutiones Rei Herbariæ*," and other botanical works, from 1694 to 1717; his first work "*Institutiones*," laid the foundation of the arrangement now followed, called the *Jussienan*, or *Natural System*. *Linn.* 19, Or. 1, Nat. Or. *Ehretiaceæ*. The species of *Tournefortia* are hardly worth cultivating for ornament. They are of the easiest management; and are readily increased by cuttings, in sand, those of the stove species in heat. *Synonymes*: 1, *Messerschmidia caracasana*; 2, *Heliotropium gnaphalodes*; 3, *Messerschmidia umbellata*, *M. velutina*; 4, *Argusia montana*, *Messerschmidia Arguzia*, *T. Arguzia*. See *Heliotropium* and *Messerschmidia*.

TOURRÉTTIA, Dombey. In honour of Marc Antoine Louis Claret de la Tourrette, a friend of Rousseau, author of some botanical works. *Linn.* 14, Or. 2, Nat. Or. *Bignoniaceæ*. The seed should be sown on a hotbed, early in spring, and when the young plants are sufficiently strong, they may be planted in light soil, against a wall or pillar. *Synonymes*: 1, *Dombeya lappacea*.
lappacea 1 . . . Ro. grn. 7, H. Cl. A. 6 Peru . . 1788

TOVOMITA. See *Micranthéra*.

TOWER MUSTARD. See *Tarritis*.

TOWER MUSTARD. See *Arabis Tarrita*.

TOXICODENDRON. See *Rhus Toxicodendron* and *Hyenanche globosa*.

TUZA. See *Quercus pyrenaica*.

TRACHÉLIUM, Linn. From *trachelos*, the neck; for its supposed efficacy in diseases of the *Trachea*; hence the English name of the genus, *Throatwort*. *Linn.* 5, Or. 1, Nat. Or. *Campanulaceæ*. This genus is very showy when in flower. It thrives best in light soil, against a south wall; and is easily increased by seeds, or by cuttings, planted under a glass, in spring.

coeruleum . . .	Blue	8, H. Her. P.	1 1/2 Italy	1640
diffusum . . .	Blue	7, G. Her. P.	2 C. G. H.	1787

TRACHYMÈNE, Rudge. From *trachys*, rough, and *hymen*, a membrane; channels of the fruit. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. All the species will succeed well in a mixture of loam and sandy peat; and they may be increased by young cuttings, in the same kind of soil, under a glass, or by seeds. *T. cœrulea* is raised from seed, sown on a gentle hotbed; and afterwards treated like other greenhouse plants. *Synonymes*: 1, *Didiscus cœruleus*.

albida . . .	Br. cream	7, G.	A. 1 1/2 N. Hol.	1838

TRACHYSPERMUM, Link. From *trachys*, rough, and *sperma*, a seed; in reference to the muricated fruit. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. An uninteresting plant, of very simple culture, and increased by seeds. *Synonymes*: 1, *Bunium rigens*, *Conium rigens*—*rigens* 1.

TRACHYSTEMON. See *Borago*.

TRACHYTÉLIA, De Candolle. From *trachytes*, roughness; because the leaves, which have a very rough surface, are used for polishing wood, and also metal. *Linn.* 13, Or. 5, Nat. Or. *Dilleniaceæ*. This species succeeds well in a mixture of peat and loam, and ripened cuttings root freely in sand, under a glass.
actaea . . . White . . . 6, G. Ev. Cl. 5 China . . 1823

TRADESCANTIA, Linn. In honour of John Tradescant, gardener to Charles I. *Linn.* 6, Or.

1, Nat. Or. *Commelynaceæ*. Interesting plants, succeeding well in any rich, light soil; and readily increased by division. *Synonymes*: 1, *T. multiflora*; 2, *Cyanotis vittata*. See *Camphelia* and *Cyanotis*.

TRAGORIGANUM. See *Thymus Tragoriganum*.

TRAGUS. See *Caléndula Tragus* and *Salsola Tragus*.

TRANSVERSELY-FLEXUOSE, waved in a cross direction.

TRĀPA, *Linn.* Abridged from *calciſtrapa*, the Latin name of an instrument called *caltraps*, furnished with four spines, formerly used in war to impede the progress of cavalry; the fruit of some of the species is furnished with four spines. *Linn.* 4, Or. 1, Nat. Or. *Onagraceæ*. Aquatic plants, requiring a rich, loamy soil, and to be grown in a cistern, or large pot or tub of water; increased by seeds. The large seeds of *T. bispinosa* are sweet and eatable; they form an extensive article of cultivation. In Cashmere and other parts of the East, they are common food, and known under the name of *Singhara* nuts.

bicornis . . . White . 7, G. Aq. A. ½ China 1790

Trapeziform, shaped like a trapezium.

TRAVELLER'S JOY. See *Clématitis Vitalba*.

TRAVELLER'S JOY. See *Clématitis Viorna*.

TREACLE MUSTARD. See *Clypeola*.

TREE BEARD. See *Usnea*.

TREE CELANDINE. See *Boccònia frutescens*.

TREE KALE, or **CÆSAREAN COW-CABBAGE**. See *Brássica*.

TREE MALLOW. See *Lavatera arborea*.

TREE OF SADNESS. See *Nyctánthes arbor tristis*.

TREE ONION. See *Allium proliferum*.

TREE SORREL. See *Rumex Lunaria*.

TREFOIL. See *Trifolium*.

TREÍSLIA. See *Euphòrbia*.

TREMÁNDRA. See *Tetralhæca*.

TREMANDRACEÆ, or **PORE-WORTS**, are small slender shrubs, something like heaths. They are all natives of New Holland, and are worth a place in plant collections.

TREMBLING AMERICAN-TREE. See *Pópulus tremula*.

TREMÉLIA, *Dillenius*. From *tremo*, to tremble; in allusion to the gelatinous texture of the plants. *Linn.* 24, Or. 9, Nat. Or. *Aguricææ*. Found growing on fallen branches of trees—*albida, biparasitica, cerebrina, clavariæformis, clavata, fimbriata, foliacea, f. violacea, intrumescens, mesenterica, sarcoides*.

TRENTÉPÓHLIA, *Agardh*. In honour of M. Trentepohl, an obscure German botanist. *Linn.* 24, Or. 7, Nat. Or. *Bryacææ*. Found on rocks, on the sea-coast—*aurea, a. ilicicola, pulchella, p. chalybæa, purpurea*.

TRESIA. See *Euphòrbia*.

TREVIRÂNIA, *Willdenow*. In honour of Lud. Christ. Treviranus, M.D., professor of botany in the university of Bonn. *Linn.* 14, Or. 2, Nat. Or. *Gesneracææ*. This species is extremely handsome when in flower. It requires to be grown in a light, rich soil, and when the blossoms have withered, the plants should not have any more water till the roots begin again to vegetate; when they must be taken out of the pots and divided. After they are potted, they require moisture and heat to make them grow and flower in perfection. *Synonymes*: 1, *Cyrilla pulchella*. *T. coccinea*. See *Achimenes pulchella* 1. . Scarlet 8, S. Her. P. 1½ Jamaica 1778

TREVÒA, *Hooker*. *Trevo*, the name of a Spanish botanist. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. Interesting plants, thriving in sandy loam and peat; and increased by young cuttings, in sand, under a glass.

quinquenervia . White . 6, G. Ev. S. 4 Chile . 1827
trinervis . . . Grn. yel. 6, G. Ev. S. 3 Chile . 1828

TREWIA, *Linn.* In honour of C. J. Trew, of Nuremberg, a botanical author. *Linn.* 22, Or. 12, Nat., Or. *Euphorbiacææ*. This species succeeds well in sandy loam and peat; and is readily increased by cuttings, in sand, under a glass, in heat. *Synonyme*: 1. *T. macrophylla*.
nudiflora 1 . . Pink . 5, S. Ev. S. 5 E. Ind. 1796

TRIANDROUS, having three stamens.

TRIANTHEMA, *Linn.* From *treis*, three, and *anthos*, a flower; flowers usually disposed in threes. *Linn.* 10, Or. 2, Nat. Or. *Portulacacææ*. Plants of little interest. Any common garden soil suits them; increase is by seeds.

decandra . . . Green . 7, S. A. 1½ E. Ind. 1824

TRICERATIA. See *Lacépèdia*.

TRÍCEROS. See *Lacépèdia*.

TRICHATA, *Link.* From *treis*, three, and *chaete*, a bristle. *Linn.* 3, Or. 2, Nat. Or. *Grami-*

nāceæ. A mere weed; increased by seeds. *Synonymes*: 1. *Brōmus ovātus*, *Trisetum ovātum*, *Avena ovāta*—ovāta 1.

TRICHIA, *Hall*. From *thrix*, a hair; in allusion to the internal mass of elastic fibres gradually expanding after the head bursts. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. Small, pin-headed plants, found upon rotten wood. *Synonyme*: 1. *Sphærocarpus fragilis*—fallax 1, nitens, ovāta, reticulāta. See *Arcyria*, and *Stemonitis*.

TRICHILIA, *Linn.* From *tricha*, ternary; the stigma is three-lobed, and the capsule three-celled and three valved. *Linn.* 10, Or. 1, Nat. Or. *Meliaceæ*. These trees succeed in a mixture of loam and peat; and cuttings of the ripened wood, with the leaves entire, will root in sand, under a glass, in heat. *Synonyme*: 1. *T. glābra*.

TRICHOCLĀDUS, *Persoon*. From *thrix*, a hair, and *klados*, a branch; the branches are clothed with stellate hairs. *Linn.* 22, Or. 1, Nat. Or. *Hamamelidaceæ*. For culture and propagation, see *Treada*.

crinitus	. . Green	. 8, G. Ev. S. 2 C. G. H.	1823
----------	-----------	---------------------------	------

TRICHODÉRMA, *Persoon*. From *thrix*, a hair, and *derma*, a skin; downy covering. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. Powdery masses, found upon dead branches—*viride*.

TRICHODÉSMMA, *R. Brown*. From *thrix*, a hair, and *desmos*, a bond; the anthers are bound to each other by hairs. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceæ*. Worthless half-hardy annuals, of the easiest culture. *Synonymes*: 1. *Borago zeylanica*, *T. kotschyannum*—africanum, indicum, zeylanicum 1.

TRICHODIUM, *Schrader*. From *thrix*, a hair, and *eidos*, like; hair-like appearance of inflorescence. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Worthless plants, readily increased by seeds in common soil—*alpinum*, *caninum*, *decumbens*, *diffusum*, *elegans*, *flavescens*, *hybridum*, *laxiflorum*, *neglectum*, *rubrum*, *rupesire*, *setaceum*.

TRICHOGLŌTTIS, *Lindl.* From *thrix*, hair, and *glotta*, a tongue. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A small epiphyte, not possessing much beauty, and requiring similar treatment to *Maxillaria*.

pallens	. . . Yel. grn.	8, S. Epi.	1/2	Manilla	1849
---------	-----------------	------------	-----	---------	------

TRICHŌGYNE, *De Candolle*. From *thrix*, hair, and *gyne*, a style; styles covered with hairs. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Sow the seeds in any common garden soil.

cauliflōra	. . White	. 6, H.	A. 1 1/2	Egypt
------------	-----------	---------	----------	-------

TRICHOLĒNA, *Schrader*. From *thrix*, a hair, and *chlaina*, a cassock. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A pretty grass, succeeding in loam and peat; and increased by seeds. *Synonymes*: 1. *Saccharum Teneriffæ*, *Panicum Teneriffæ*.

micrantha	1 . . Apetal	. 6, F. Grass	1	Teneriffe	1825
-----------	--------------	---------------	---	-----------	------

TRICHŌMANES, *Linn.* From *thrix*, a hair, and *manos*, soft; the shining stems appear like fine hair. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. A genus of elegant ferns. A mixture of loam and peat suits them best; and they are increased by division or seeds. *Synonyme*: 1. *Hymenophyllum alatum*. See *Davallia*.

TRICHOPETALUM, Lindley. From *thrix*, a hair, and *petalon*, a petal; the inner series of the perianth is fringed. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. This curious genus succeeds best if planted out in a pit, or frame effectively drained, with a southern aspect, and from which the frost is entirely excluded; it will also succeed in pots, well drained, in a light, rich soil; increased by divisions. *Synonyme*: 1, *Anthericum plumosum*.

gracile.	Grnsh.	. 7, F. Her. P. 2 Chile. 1828
stellatum	1 White.	. 4, F. Her. P. 1 Chile. 1829

TRICHOPHORUM, Richard. From *thrix*, a hair, and *phoreo*, to bear; the inflorescence resembles a bunch of hair. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceae*. The species are found in peat bogs. Their seeds are covered with a silky down, of which cloth, paper, and wicks of candles have been made; and with which pillows and cushions are sometimes stuffed. *Synonyme*: 1, *Eriophorum montevidense*.

TRICHORHIZA. See *Sarcanthus* and *Vanda*.

TRICHOSACHME, Zucc. From *thrix*, hair, and *achme*, a point. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceae*. The culture of this genus is the same as other Stove-climbers, and increase is by cuttings.

lanata.	Purple.	. 7, S. Ev. Tw. 8 S. Amer. 1850
---------	---------	---------------------------------

TRICHOSANTHES, Linn. From *thrix*, a hair, and *anthos*, a flower; the corollas are ciliated. *Linn.* 21, Or. 10, Nat. Or. *Cucurbitaceae*. The seeds of the *Snake-Gourd* should be sown on a hotbed in spring, and afterwards treated like cucumbers. *Synonyme*: 1, *Cucumis anguineus*. See *Cerasolanthus* and *Melothria*.

cordata, cucumerina, lobata.

TRICHOSMA, Lindley. From *thrix*, hair, and *kosmos*, ornament. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. A very pretty epiphyte, which thrives if fixed upon a block of wood or fern roots. *Synonyme*: 1, *Calogyne coronaria*.

suavis	1	Wht. yel. 6, S. Epi. 1 E. Indies. 1840
--------	---	--

TRICHOSPERMUM. See *Eschymanthus*.

TRICHOSPORUM. See *Eschymanthus*.

TRICHOSTEMA, Linn. From *thrix*, a hair, and *stema*, a stamen; in allusion to the slender, hair-like stamens. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceae*. The seeds of *Trichostema* should be sown in the open border. See *Isanthus*.

dichotomum	Blue	. 6, H. A. 1 N. Amer. 1759
lineare.	Blue	. 7, H. A. 1 N. Amer. 1759

TRICHOSTOMUM, Hedwig. From *thrix*, a hair, and *stoma*, the mouth; the divisions of the mouth of the theca are very fine. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. Dark green tufts, found on mountains. *Synonymes*: 1, *Dicranum aciculare*; 2, *T. ericoides*; 3, *D. ellipticum*; 4, *D. patens, obtusum*; 5, *D. polyphyl- lum, cirrhatum*—*aciculare* 1, canescens 2, ellipticum 3, fasciculare, heterostichum, lanuginosum, microcarpon, patens 4, polyphyl- lum 5. See *Dicranum* and *Didymodon*.

TRICHOTHECIUM, Link. From *thrix*, a hair, and *theca*, a seed-case; the thecae are intermixed with a mass of hair-like filaments. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceae*. Found upon decayed wood—*heterosporum, roseum*.

TRICHOTOMOUS, divided into threes.

TRICOCCLUS, a fruit of three one-seeded cells, as that of *Euphorbia*.

TRICORYNE, *R. Brown*. From *treis*, three, and *koryne*, a club; in allusion to the form of the capsules. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. The species of this genus thrive well in a light rich soil; and are readily increased by division; *T. simplex* is raised from seeds.

TRICRATUS. See *Abronia*.

TRICUSPIDATE, having three points.

TRICUSPIS, *Beauvois*. From *treis*, three, and *cuspis*, a point; in allusion to the structure of the flowers. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. According to Pursh, this is a very valuable grass for mountain meadows. In Pennsylvania it produces two excellent crops every year, and lasts many years without manure, even upon indifferent soils; increased by seeds. *Synonyme*: 1, *Poa cærulescens*. quinquëfida 1. Apetal 6, H. Grass. 3 N. Amer. 1820

TRIDACTYLITES. See *Saxifraga*.

TRIDAX, *Linn.* From *tridaknos*, thrice-bitten: the rays of the flower are divided into three. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A hardy annual, of no interest. *Synonyme*: 1, *Balbisia elongata*—procumbens 1.

TRIDENS, *Roemer*. From *tridens*, a trident. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. *Synonymes*: *Triddia culprea*, *Poa quinquëfida*—quinquëfida.

TRIDENTATE, having three teeth.

TRIDÉNTEA, *Haworth*. From *tridens*, a trident; the segments of the outer corona are tridentate. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. Nearly allied to the genus *Stapelia*; which see, for culture and propagation. *Synonymes*: 1, *Stapelia gemmiflora*; 2, *S. hircosa*; 3, *S. rugosa*; 4, *S. vetula*.

TRIENTALIS, *Linn.* From *triens*, one-third; probably in allusion to the humble growth of the species. *Linn.* 7, Or. 1, Nat. Or. *Primulaceæ*. Interesting little plants, thriving in a light rich soil; and readily increased by division or seeds.

americana . . . White 7, H. Her. P. 1 N. Amer. 1816
europæa . . . White 5, H. Her. P. 1 Brit., woods.

TRIFARIOUS, arranged in three rows.

TRIFID, divided into three.

TRIFOLIOLATE, having three leaflets.

TRIFOLIUM, *Linn.* From *tres*, three, and *folium*, a leaf; all the species of the genus have trifoliate leaves. The French call it *trèfle*, and the English *trefoil*, or clover. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The white, red, and yellow clover are among the most valuable herbage plants adopted in European agriculture. *Lucern* has been recommended as superior to clover, and *saintfoin* and various other

leguminous plants have been highly extolled; yet the red clover for mowing, and the white for pasturage, far excel all other plants in these respects. All the species thrive in common garden soil, and many of them, being very showy, are well suited for ornamenting the flower-borders. The perennial kinds are readily increased by dividing the plants at the root in spring, or by seeds. The seeds of the annual and biennial kinds only require sowing in the open border. Those species marked frame and greenhouse, require protection only in winter. *Synonymes*: 1, *T. Cupdini*; 2, *T. gracile*; 3, *T. hispidum*; 4, *T. pictum*; 5, *T. Molinieri*; 6, *T. cœnicum*; 7, *T. cœnicum*; 8, *T. obscurum*; 9, *T. aristatum*; 10, *Lupinaster pentaphyllum*; 11, *T. albens*; 12, *T. irregulare*; 13, *Lupinaster macrocephalum*; 14, *T. strictum*; 15, *T. campestre*; 16, *Lupinaster oblongifolium*; 17, *T. squarrosum*; 18, *T. pratense flavicans*; 19, *T. recurvum*. See *Melilotus*, *Pocockia*, *Stylosanthes*, and *Trigonella*.

TRIGONAL, having three angles.

TRIGONELLA, *Linn.* From *treis*, three, and

gonu, an angle; the vexillum of the flower is flat, while the wings spread and give it a triangular appearance. *Linn.* 17, Or. 4, Nat. Or. *Rabaceae*. These plants are not very ornamental. They all succeed best in a light sandy soil; the perennial kinds are readily increased by dividing the plants at the root, or by seeds; while the annual kinds only require sowing in the open border in spring. The seeds of *T. Féniumgræcum* are used in fomentations, for softening, maturing, and dispersing tumours. *Synonymes*: 1, *Melilotus procumbens*; 2, *M. cæruleus*; 3, *Trigonella flexuosa*; 4, *Trifolium ornithopodioides*; 5, *Trigonella media*; 6, *M. hamosa, uncinata*. See *Lotus*.

TRIGONIDIUM, *Lindley*. From *trigona*, a triangle, and *eidos*, like; in allusion to the triangular form of several parts of the plant. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. This is rather an interesting genus of easily cultivated, though slow growing plants. They require to be grown in good fibrous peat, raised a little above the pot, which must be thoroughly drained.

TRIGUERA. Cavanilles named this genus after D. Trigueros, a Spanish botanist who first discovered the plant. *Linn.* 5, Or. 1, Nat. Or. *Malvaceae*. For culture and propagation, see *Verbascum*. *Synonyme*: 1, *Verbascum Osbeckia*, *ambrosiaca* 1 . Pursh. vio. 7, H. A. 2 Spain 1762

TRIGYNOUS, having three styles.

TRILLIUM, *Linn.* From *trilix*, triple; the calyx has three sepals, the corolla three petals, the pistil three styles, and the stem three leaves.

Linn. 6, Or. 3, Nat. Or. *Melanthaceæ*. Curious little tuberous-rooted plants, succeeding best in a bed of peat soil, and rather slowly increased by dividing the roots, or by seeds. The roots of all the species are violently emetic, and their mawkish, rather nauseous berries, are at least suspicious. *Synonymes*: 1, *T. rhomboideum*; 2, *T. pendulum*; 3, *T. pictum*; 4, *T. erythrocarpum*; 5, *T. erectum* var.; 6, *T. pusillum*.

TRILLIACEÆ, or PARIDS. A small group nearly related to *Sarsaparillæ*; they are all natives of temperate climates. The *Paris quadrifolia*, of our woods, gives their general character.

TRILOCULAR, having three cells.

TRIMEZIA, *Hubert*. Meaning unknown. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. For culture, &c., see *Iris*. *Synonyme*: 1, *Iris martinicensis*.

meridensis 1 . Yellow . 4, H. Bl. P. 1 Merida. 1848

TRÍNIA, *Hoffmann*. In honour of Dr. Trinius, a famous Russian botanist. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Worthless hardy biennials. *Synonymes*: 1, *Pimpinella dioica*; 2, *P. dichotoma*, *ramosissima*, *glauca*; 3, *T. Henningii*—*Hoffmanni* 1, *Kitaibeli* 2, *vulgaris* 3.

TRIDIA, *R. Brown*. From *treis*, three, and *odous*, teeth; the palea. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A perennial hardy grass, increased by seeds. *Synonyme*: 1, *Poa decumbens*—*decumbens* 1.

TRIDNUM. See *Hibiscus Tridnum*.

TRIPTERIS, *Linn.* From *treis*, three, and *pteron*, a wing; the carpels are each furnished with three wings. *Linn.* 16, Or. 6, Nat. Or. *Malpighiaceæ*. A genus of very elegant twiners, extremely difficult to bring into flower in this country. They grow well in a mixture of loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat. See *Tetrapteris*.

jamaicensis. Yellow 5, S. Ev. Tw. 10 Jamaica . 1822

sericea . Yellow 5, S. Ev. Tw. 8 S. Amer. . 1823

lucida . Pink . 5, S. Ev. Tw. 8 Cuba . 1822

TRIÓSTEUM, *Linn.* From *treis*, three, and *osteon*, a bone, in allusion to the three hard seeds. *Linn.* 5, Or. 1, Nat. Or. *Caprifoliaceæ*. The species thrive well in a light rich soil; and are increased by cuttings, or by parting at the roots. *T. perfoliatum* is a mild cathartic.

Its dried and roasted berries have been used as coffee.

angustifolium Yellow 6, H. Her. P. 1 Virginia 1699

perfoliatum . Dk. red 6, H. Her. P. 1 N. Amer. 1730

TRIPE ROCK. See *Gyróphora*.

TRIPETALOUS, having three petals.

TRIPHASIA, *Loureiro*. From *triphasios*, triple; the calyx is three-toothed, and there are three petals. *Linn.* 6, Or. 1, Nat. Or. *Aurantiaceæ*. This plant succeeds well in turfy loam and peat; but it must be carefully watered during winter. Cuttings, ripened at the base, will root in sand, under a glass, in heat. *Synonymes*: 1, *T. aurantiola*; 2, *Limnoria trifoliata*.

trifoliata 1 . White 6, G. Ev. S. 2 China . 1798

TRIPHORA. See *Pogonia*.

TRIPHYSARIA, *Fischer*. From *tris*, three, and *physa*, a bladder; three segments of the lower lip of corolla saccate. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. A hardy annual, growing in any common light soil, and propagated by seeds.

versicolor . Wht, red 6, H. A. 2 California 1837

TRIPINNARIA. See *Tanacetum*.

TRIPINNATE, thrice pinnate.

TRIPLARIS, *Linn.* From *triplex*, triple; the parts of fructification are disposed in threes. *Linn.* 22, Or. 3, Nat. Or. *Polygonaceæ*. For culture and propagation, see *Tréviá*.

americana . Pa. yel. 6, S. Ev. T. 50 S. Amer. . 1824

TRIPLE-NERVED, throwing out three side nerves a little above the base.

TRIPOLIUM. See *Aster*.

TRIPSACUM, *Linn.* From *tribo*, to thresh; in allusion to the purpose to which its grain may be applied. *Linn.* 21, Or. 3, Nat. Or. *Graminaceæ*. These plants grow in any rich mould, and are increased by division. They are forage grasses of the West Indies—*dactyloides*, *monostachyon*. See *Anthephora*.

TRIPTERIS. See *Caléndula*.

TRIPTILION, *Ruiz* and *Pavon*. From *treis*, three, and *ptilon*, a feather; on account of the three divisions of the pappus. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. A genus of very pretty annuals. The seeds must be raised on a hot-bed in spring, and planted out in the open border about the end of May. *Synonyme*: 1, *Naussauvia spinosa*.

cordifolium . White 7, H. A. 1 Chile . 1824

sphaosum 1 . Blue . 7, H. A. 1 Chile . 1827

TRIQUETROUS, having three sides or angles.

TRISECTED, cut into three parts.

TRISETERUM, *Persoon*. From *treis*, three, and *seta*, a bristle, on account of the three awns of the flower. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. According to the Woburn experiments, *T. pubescens* is well suited for a permanent pasture on light rich soils; it is hardy, early, and more productive than many other kinds in similar soils. *Synonymes*: 1, *Avena planiculmis*, *alpina*; 2, *A. flavescens*; 3, *A. pubescens*; 4, *A. striata*—*airoides*, *Alopecurus*, *alpêtre*, *alpinum* 1, *argenteum*, *brevifolium*, *carpatium*, *condensatum*, *distichophyllum*,

flavescens 2, Læfingianum, micranthum, neglectum, parviflorum, pennsylvanicum, pilosum, pubescens 3, rigidum, striatum 4, tenue. See *Trichæta*.

TRISTANIA, *R. Brown*. In honour of M. Tristan, a French botanist. *Linn.* 18, Or. 2, Nat. Or. *Myrtaceæ*. Very pretty shrubs, thriving well in loam, peat, and sand, and increased readily by half-ripened cuttings, planted in sand, under a glass. *Synonyme*: 1, *T. albens*; 2, *T. laurina*.

TRISTEGIS, *Nees*. From *treis*, three, and *steges*, a covering; in reference to the three glumes or valves of the calyx. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. Growing in common soil, and increased by seeds.

glutinosa . . . Apetal 6, H. Grass $\frac{1}{2}$ S. Eur. . 1822

TRITELIA, *Lindley*. From *treis*, three, and *telites*, complete; in allusion to the perfect ternary arrangement of its parts. *Linn.* 3, Or. 1, Nat. Or. *Liliææ*. Very handsome plants, of easy culture in a mixture of peat, loam, and sand, and readily increased by offsets from the roots; or by seeds.

TRITURATED, reduced to powder by pounding.

TRIUMFETTA, *Linn.* In honour of John Triumfetti, an Italian botanist and author. *Linn.* 11, Or. 1, Nat. Or. *Tiliææ*. Uninteresting plants, chiefly under-shrubs, growing in common garden soil; cuttings and seeds. *Synonyme*: 1, *T. macrophylla*—*althæoides* 1, *angulata*, *aurea*, *glandulosa*, *grandiflora*, *havanensis*, *heterophylla*, *Lappula*, *micropetala*, *oblongata*, *pilosa*, *rhomboidea*, *rotundifolia*, *semitrilloba*, *suborbiculata*, *trichoclada*, *trilocularis*.

TRIURIDACEÆ, or **TAILWORTS**. These are small perennial herbs, growing only a few inches high; they are found in the damp, shady woods of Brazil.

TRIXAGO. See *Bartsia*.

TRIXIS, *P. Browne*. From *trixos*, triple; on account of its triangular capsule, with three cells. *Linn.* 19, Or. 4, Nat. Or. *Asterææ*. Interesting plants, of common culture. *Syno-*

nymes: 1, *Perdicium brasiliense*; 2, *Leuceria senecioides*.

auriculata 1. White 8, S. Ev. S. 1½ Brazil . . 1827
senecioides 2 White 8, H. A. 1½ Chile . . 1821

TRIZÉUXIS, *Lindley*. From *treis*, three, and *zeuxis*, a union; in allusion to the cohesion of the three sepals. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A small plant, of no beauty. It succeeds best if fastened to a piece of wood.

falcata . . Green . 3, S. Epi. . ½ W. Indies . 1820

TROCHÉTIA, *De Candolle*. In honour of M. Dutrochet, the celebrated French physiologist. *Linn.* 16, Or. 8, Nat. Or. *Byttneriaceæ*. A most noble stove plant, producing snow-white blossoms, with a yellow blotch at the base of each petal. They are nearly three inches in diameter. Cuttings will root in sand under a hand-glass.

grandiflora . Wht.yel. 12, S. Ev. S. 10 Mauritius 1842

TROCHISCÁNTHEs, *Koch*. From *trochiskos*, a small wheel, and *anthos*, a flower. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A hardy herbaceous plant, of no beauty. *Synonyme*: 1, *Ligusticum nodiflorum*—nodiflora.

TROCHLEATE, twisted like a pulley.

TROCHOCÁRPA, *R. Brown*. From *trochos*, a wheel, and *karpós*, fruit; the cells of the fruit diverge from a common centre, like the spokes of a wheel. *Linn.* 5, Or. 1, Nat. Or. *Epaeridaceæ*. An extremely handsome tree. For culture and propagation, see *Epácris*. *Synonyme*: 1, *Styphelia cornifolia*.

laurina 1 . . Yellow 6, G. Ev. T. 25 N. Holl. 1829

TROLLIUS, *Linn.* From *trol*, or *trolin*, an old German word, signifying something round; in allusion to the shape of the flower; whence, also, the English name Globe-flower. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceæ*. Pretty border plants, thriving best in a light moist soil, and increasing by division or seeds. *Synonymes*: 1, *T. laccus*; 2, *T. ranunculinus*.

TRÓNGUM. See *Solanum Tróngum*.

TROPÆOLÁCEÆ, INDIAN CRESSSES, or **NASTURTIIUMS**. These are so well-known inhabitants of our gardens and greenhouses, that any description here would be unnecessary.

TROPÆOLUM, *Linn.* From *tropaion*, a trophy; the leaves resemble a buckler, and the flowers an empty helmet. *Linn.* 8, Or. 1, Nat. Or. *Tropæolaceæ*. All the species are very showy when in flower, and are therefore desirable acquisitions to every collection. The greenhouse and frame species thrive in any light rich soil; and are readily increased by cuttings in the same kind of soil, under a glass. The annual species should be sown in the open ground in spring. The tuberous-rooted kinds succeed well in the open air, in a sheltered situation, during summer; in winter they may be taken up and kept in sand until spring, when they may be again planted out into the open ground. The seeds of *T. majus* are pickled, and used as capers, to which they are preferred by some. The roots of *T. tuberosum* are eaten in Peru. *Synonymes*: 1, *T. polyphyllum*; 2, *T. edule*; 3, *T. peregrinum*. See *Chymocarpus*.

GARDEN VARIETIES.—There are a great many new and very handsome varieties now cultivated in our collections: for their names and characters, refer to the nurserymen's catalogues.

TRÔPHIS, *Linn.* From *trophe*, fodder; the leaves and twigs are used as fodder for cattle when grass is scarce. *Linn.* 22, Or. 2, Nat. Or. *Urticaceæ*. These plants grow freely in loam and peat; cuttings.

americana . Green . 4, S. Ev. T. 20 W. Indies . 1789

aspera . . Green . 4, S. Ev. T. 30 E. Indies . 1802

spinosa . . Green . 4, S. Ev. S. 12 E. Indies . 1826

TROPHY-CRESS. See *Tropæolum*.

TROS. See *Narcissus*.

TROXIMON, *Don*. From *troximon*, eatable. *Linn*. 19, Or. 1, Nat. Or. *Asteraceæ*. Any common soil suits these plants, and they are readily increased by division. *Synonyme*: 1, *T. marginatum*. See *Krigia*.

cuspidatum 1 Yellow. 7, H. Her. P. 1 Louisiana 1824
glabrum . . Yellow. 5, H. Her. P. 1 Missouri. 1811

TRUE DODDER. See *Cuscuta Epithymum*.

TRUE PARSLEY. See *Aptum Petroselinum*.

TRUE SERVICE. See *Pyrus Sorbus*.

TRUFFLE. See *Tuber*.

TRUMPET-FLOWER. See *Bignonia*.

TRUMPET-WOOD. See *Cecropia*.

TRUNCATUS, blunt, as if cut off.

TRYMÄLIUM, *Fenzl*. Not explained. *Linn*. 5, Or. 1, Nat. Or. *Rhamnaceæ*. This species is well deserving a place in every collection of greenhouse plants, on account of its snow-white flowers; which, being produced in numerous loose, drooping panicles, render it a very beautiful object when in blossom; its flowers are also deliciously fragrant. The wood is said to be soft and pithy, and the plant apt to die off in winter, if overpotted, and not kept in a warm and light situation: in other respects, it may be treated as the greenhouse species of *Ceanothus*.

odoratissimum. White. 2, G. Ev. S. 4 N. Holl. 1837

TRYMÄNIUM. See *Odontoglossum*.

TUBE-FLOWER. See *Olerodendron Siphonanthus*.

TUBE OF CALYX, the tube formed by the cohesion of the sepals.

TUBE OF STAMENS, the tube formed by the cohesion of the filaments in *monadelphous* flowers.

TÜBER, *Michaux*. An ancient Roman name for a fungus. *Linn*. 24, Or. 9, Nat. Or. *Helvellaceæ*. *T. cibarium* is the famous truffle, so celebrated in the annals of cookery. It grows under ground, and is found in light dry soils, in some of the southern counties; but it is much more common in Italy, Germany, and the south of France, whence immense quantities are imported. Dogs are taught to find this fungus by the smell, and to scratch it up out of the earth. An instance is recorded of a man having possessed this power. It is reported to have a stimulating aphrodisiacal quality, which perhaps renders it more popular than its flavour, which is trifling—*albidum*, *cibarium*. See *Scleroderma*.

TUBERCULÄRIA, *Tode*. From *tuberculum*, a pimple; warted appearance of the plants. *Linn*. 24, Or. 9, Nat. Or. *Botrytaceæ*. Found upon dead branches. *Synonyme*: 1, *Clavaria coccinea*—*albida*, *confluens*, *discoidea*, *granulata*, *nigricans*, *vulgaris* 1.

TUBERCULATUS, covered with knots or tubercles.

TUBEROSE. See *Polyanthus tuberosa*.

TUBEROUS, bearing fleshy, solid, roundish, or longish root-like underground stems, as the potato.

TULBÄGHIA, *Linn*. In honour of Tulbagh, a Dutch governor at the Cape of Good Hope.

Linn. 6, Or. 1, Nat. Or. *Liliaceæ*. Interesting plants when in flower. They succeed well in sandy loam and peat, and are increased by offsets or seeds.

violacea . . . Purple . . 3, G. Bl. P. 1 C. G. H. 1838

TULIP. See *Tulipa*.

TULIPA, *Tournefort*. Said to be from *Thoulyban*, its Persian name. *Linn*. 6, Or. 1, Nat. Or. *Liliaceæ*. A genus of very celebrated and much-prized florist's flowers. They succeed well in rich loam and sand, and are increased by offsets; new varieties are obtained from seed. The choicer kinds require to be taken up and dried after they have ceased flowering, and planted again in the autumn. They should be slightly protected in very rainy or frosty weather, or they are very liable to rot. *Synonyme*: 1, *T. acuminata*. See *Melanthium*.

TURBETH. See *Ipomoea Turpethum*.

TURBINATE, having the figure of a top.

TURGENTIA, *Hoffman*. From *turgeo*, to swell: the fruit. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. An uninteresting plant; seeds. *Synonyme*: 1, *Caucalis latifolia*—*latifolia* 1.

TURGID, swollen, puffed.

TURGOSIA. See *Crassula*.

TURKEY-BERRY-TREE. See *Cordia alliodora*.

TURKEY-BLOSSOM. See *Tribulus terrestris*.

TURMERIC. See *Curcuma*.

TURNERA. *Linnaeus* dedicated this genus to the memory of William Turner, prebendary of York, canon of Windsor, &c., author of a "New Herbal," 1551, fol., he died in 1568. *Linn.* 5, Or. 3, Nat. Or. *Turneraceae*. A genus of very elegant plants when in flower. They thrive in any rich soil, and are all readily increased by seeds, the shrubby kinds may also be increased by cuttings. *Synonymes*: 1, *Piriqueta racemosa*; 2, *T. elegans*.

brasilensis . . Yellow 6, S. Ev. S. 1½ Brazil . . 1810

TURNERACEAE, or **TURNERADS**, are a small group of tropical shrubs and herbaceous plants, principally bearing yellow flowers, and deserving cultivation.

TURNIPS. See *Brassica Napus*.

TURNSOLE. See *Heliotropium*.

TURPENTINE-SHRUB. See *Silphium terebinthaceum*.

TURPENTINE-TREE. See *Pistacia Terebinthus*.

TURPINIA, *Ventenat*. In honour of M. Turpin,

a distinguished French botanical artist and naturalist. *Linn.* 23, Or. 2, Nat. Or. *Staphyleaceae*. Trees of little beauty. They thrive well in a mixture of loam and peat, and are increased by cuttings in sand, under a glass, in heat. *Synonymes*: 1, *Staphylea occidentalis*; 2, *Dalrymplea pomifera*.

occidentalis 1 White . . 5, S. Ev. T. 25 Jamaica 1824
pomifera 2 . . Yelsh. wht. 5, S. Ev. T. 25 Sylhet . 1820

TURREA, *Linn.* In honour of George Turra, once professor of botany at Padua, and author of several botanical works; died in 1607. *Linn.* 16, Or. 6, Nat. Or. *Meliaceae*. These plants succeed well in loam, peat, and sand, and are easily increased by cuttings, planted in sand, under a glass, in heat. *Synonyme*: 1, *T. quercifolia*.

TURRITA. See *Arabis Turrata*.

TURRITIS, *Dillenius*. From *turris*, a tower; the foliage is so disposed on the stems as to give them a pyramidal form; and for the same reason the plants are called *Tower-mustard*. *Linn.* 15, Nat. Or. *Brassicaceae*. Hardy annuals, not worth growing—*glabra*, *g. ramosa*, *Grahami*, *mollis*, *patula*, *salsuginosa*, *stricta*. See *Arabis* and *Leptocarpea*.

TUSSILAGO, *Tournefort*. From *tussis*, a cough; for curing which the flowers have been employed. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. Some of the species are very pretty. They succeed well in common soil, and are readily increased by division. *T. Farfara* is a demulcent bitter, and has been used to soothe irritations in the air passages; hence its reputation as a pectoral medicine. *Synonymes*: 1, *bohémica*; 2, *paradoxa*; 3, *lobata*; 4, *tonnentosa*. See *Chaptalia*, *Leria*, and *Pedicularium*.

minor . . . Brown . 7, H. Grass 2 Eng., marshes

TYPHACEÆ, or BULL-RUSHES, herbaceous plants growing in ponds and ditches. The order consists but of two genera; species of both are common in Britain, and in most of the cooler parts of the world.

TYPHALEA. See *Pavonia Typhalea*.

TYPHONIUM. See *Arum*.

TYPHULA, *Fries*. A diminutive of *Typha*, to which the heads bear a miniature resemblance. *Linn.* 24, Or. 1, Nat. Or. *Agaricaceæ*. Found on rotten wood and dead leaves—*erythropus*, *filiformis*, *gracilis*, *Phacorrhiza*, *tenuis*.

TYRIMNUS. See *Carduus*.

TYTŌNIA, *G. Don*. In honour of Arthur Tyton, F.L.S, by whom many of the oldest inhabitants of our gardens were preserved, but particularly those which were formerly cultivated by Miller, and which are now only to be found in his collection. *Linn.* 5, Or. 1, Nat. Or. *Balsaminaceæ*. A beautiful aquatic plant, worthy of a place in every collection. It must be grown in large pots of water, in a rich loamy soil, and placed in a hot part of the stove. The seeds require to be sown in spring. *Synonyme* : 1, *Impatiens nātans*.

nātans 1 . Various . 8, S. Aq. A. 2 E. Indies . 1810

U.

UGENA. See *Lygodium*.

UGNI. See *Eugenia Ugni*.

ULEX, *Linn*. Said to be taken from the Celtic *ale*, a point; in allusion to the prickly branches. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. The double variety of *U. Europæa* is a very elegant plant, and is increased by young cuttings, under a hand-glass; the other kinds are increased by seeds. *Synonyme* : 1, *U. hibernica*. See *Stauracanthus*.

europæa . . . Yellow . 6, H. Ev. S. 5 Brit., heaths.
flore-pleno . Yellow . 5, H. Ev. S. 5 Brit., gards.

ULLA, *Persoon*. In honour of Antonio Ulloa, a Spanish naturalist. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. This species succeeds well in decayed wood, or vegetable mould, and is increased by cuttings. *Synonyme* : 1, *Juanullda parastica*.

parastica 1 . Scar. or. . 6, Parasite 2 Peru . 1824

ULLUCO. See *Ullucus*.

ULLUCUS, *Lozano*. From *ulluco*, its Peruvian name. *Linn.* 5, Or. 1, Nat. Or. *Basellaceæ*. The species is a native of Peru, and the roots, being tuberous, are eaten by the natives. When the potatoes in this country were attacked with disease in 1846, this plant was introduced to supply the place of the potato; but as it did not suit our palates, its culture for food was abandoned. Any common light soil will suit it, and increase is by tubers. *Synonymes* : 1, *Melldoa tuberosa*, *M. peruviana*, *Basella tuberosa*.

tuberosa 1 . . Whitish . 6, F. Tu. P. 1 Peru . 1846

ULMARIA. See *Spiræa Ulmaria*.

ULMUS, *Linn*. Supposed to be from the Saxon word *elm*, or *ulm*, a name which is applied, with very slight alterations, to the trees of this genus in all the dialects of the Celtic tongue. *Linn.* 5, Or. 2, Nat. Or. *Ulmaceæ*. Fine forest trees, succeeding best when grown on strong lands. They are increased by layers, from stools, or by grafting on the *U. montana*. *Synonymes* : 1, *U. chinensis*; 2, *U. stricta*; 3, *U. humilis*, *microphylla*, *parvifolia*, *pumila*; 4, *U. planifolia*; 5, *U. sarmiensis*; 6, *U. viscosa*; 7, *U. ciliata*; 8, *U. pendula*; 9, *U. americana*, *montana vegeta*; 10, *U. scabra*; 11, *U. crispa*. See *Plánera*.

ULMACEÆ, or ELMWORTS, are well-known trees and shrubs, many form valuable timber. The common elm tree may be taken as an example of the order.

ULOSPÉRUM. See *Krûbera*.

ULVA, *Linn.* From the Celtic *ul*, water; place of growth. *Linn.* 24, Or. 4, Nat. Or. *Confer-vacæ*. Found in the ocean, on marine rocks, and in ditches. The green laver which, stewed with lemon-juice, is so much esteemed in England, is the *U. Lactuca*—bulbosa, crispa, furfuracea, Lactuca, latissima.

ULVACEÆ. See *Confer-vacæ*.

UMBEL, a particular arrangement of the flowers in certain plants, of which the carrot is a familiar example; the peduncles or pedicels spring from a common centre, and rise till they form a flat tuft. The difference between an *umbel* and a *corymb* is, that whilst in the latter the flowers form a flat head, they do not, as in the former, spring from a common centre.

UMBELLATE, having the flowers arranged in round flat heads, with the peduncles originating from a common centre.

UMBELLIFERÆ. See *Apiacæ*.

UMBELLULATE, disposed in small umbels.

UMBILICATE, hollowed like the navel.

UMBILICUS, the cord which attaches the seed to the placenta.

UMBILICUS, *De Candolle*. From *umbilicus*, the navel; the concave leaves of some species. *Linn.* 10, Or. 4, Nat. Or. *Crassulacæ*. Interesting plants, thriving well on rock-work

or on old walls; they also grow freely in pots, in a mixture of loam, peat, and sand, and are increased by offsets or seeds. *Synonymes*: 1, *Cotyledon lutea*; 2, *C. Lievenii*; 3, *C. Umbilicus*; 4, *C. serrata*; 5, *C. spinosa*, *Sedum spinosum*, *Sempervivum cuspidatum*.

 serratus . . . Purple 6, H. Her. P. 1 Siberia . 1732
 spinosus 5 . . . White . 6, H. Her. P. $\frac{1}{2}$ Siberia . 1790

UMBONATE, having a rounded protuberant centre, like an ancient shield.

UMBRELLA-TREE. See *Hibiscus guineënsis*.

UMBRELLA-WORT. See *Oxybaphus*.

UNARMED, destitute of prickles or spines.

UNCARIA, *Schreber*. From *uncus*, a hook; the old petioles are converted into hooked spines. *Linn.* 5, Or. 1, Nat. Or. *Cinchonacæ*. For culture and propagation, see *Nauclea*. *Synonyme*: 1, *Nauclea Gâmbir*.

- Gâmbir 1 . . . Pa. red 5, S. Ev. CL 10 E. Indies 1825
 sessilifurctus Pa. red 5, S. Ev. CL 10 E. Indies 1829

UNCINATE, hooked.

UNCINIA, *Persoon*. From *oginkos*, a hook; alluding to the awn. *Linn.* 21, Or. 3, Nat. Or. *Cyperacæ*. Plants resembling sedge; increased by division. *Synonyme*: 1, *Carex uncinata*—jamaicënsis 1, phleoides.

UNCTUOUS, fat, oily.

UNDER-GNAW. See *Hypœchnus*.

UNDER-GROUND NUT. See *Arachis hypogæa*.

UNDER-GROUND ONION. See *Allium Cœpa, terrestris*.

UNDULATED, waved, rising and falling.

UNDYING FLOWERS. See *Amaranthus* and *Celosiæ*.

UNEDO. See *Arbutus Unedo*.

UNEQUAL, applied to petals and sepals, indicates that they or their sides are of unequal size and shape.

UNGNADIA, *Endl.* Named after David ab Ungnad, the Austrian minister in Turkey. *Linn.* 7, Or. 1, Nat. Or. *Hippocastanacæ*. The species is a fine hardy tree, nearly allied to *Æsculus*, and growing in any light soil. It may be increased by cuttings, and grafting on Horsechestnut stocks.

- speciosa . . . Rose 6, H. De. T. 25 Texas . . 1850

UNGUICULATE, furnished with an unguis, or claw.

UNGUIS, the taper base of anything.

UNILABATE, having only one lip.

UNILOCULAR, having one cell.

UNIOLA, *Michaux.* From *unus*, one alone; united glumes. *Linn.* 3, Or. 2, Nat. Or. *Graminacæ*. Hardy perennial species, succeeding in common soil; seeds. They are found chiefly upon the sea-coast; hence the name, *Seaside oat*—*distichophylla, latifolia, paniculata, spicata*.

UNISEXUAL, of one sex.

UNONA, *Linn.* From *uno*, to unite; stamens united with germen. *Linn.* 13, Or. 6, Nat. Or. *Anonacæ*. Interesting plants, succeeding in light turfy loam, and propagated by cut-

tings of the ripened wood, planted in sand, under a glass, in heat. The dry fruit of *U. aromática* is very pungent. From *U. Narum*, a sweet-smelling, greenish oil is procured by distilling the roots, and is used medicinally as a stimulant. *Synonyme*: 1, *Uvária lúcidu*.

UPAS RADJA. See *Strgchnos*.

UPAS TREE. See *Anturis*.

URANIA, *Schreber*. From *ouranos*, sublime; stateliness of the tree. *Linn.* 6, Or. 1, Nat. Or. *Musaceæ*. A splendid plant, well worthy of a place in every collection. It requires a mixture of turfy loam and a little peat, in a moist heat, and a good supply of water to make it grow luxuriantly. Newly imported seeds vegetate freely. *Synonyme*: 1, *Ravenata madagascariensis*. See *Phenakospermum*. species 1 . . Red . . 5, S. Her. P. 20 Madagas.

URARIA, *Desvaux*. From *oura*, a tail; the bracts. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. These plants succeed well in a mixture of loam, peat, and sand, and are increased by young cuttings in sand, under a glass, in heat; but they are raised with more facility by seeds. *Synonymes*: 1, *Hedysarum alopecuroides*; 2, *H. crinitum*; 3, *H. lagoccephalum*; 4, *H. lagopodioides*; 5, *H. arborescens*; 6, *H. pictum*.

URCEOLAR, of, or belonging to, or having an *urceolus*.

URCEOLARIA, *Acharius*. From *urceolus*, a little pitcher; alluding to the form of the shields. *Linn.* 24, Or. 8, Nat. Or. *Graphidaceæ*. Found on stones and bricks. *U. cinerea* and *U. scruposa* are used in dyeing—*Acharis*, *A. cryptaspis*, *calceolaria*, *c. Hoffmanni*, *cinerea*, *Gagii*, *globosa*, *rufescens*, *scruposa*.

URCEOLATE, pitcher-shaped.

URCEOLINA, *Reichenbach*. From *urceolus*, a small cup or pitcher; in allusion to the membranous cup. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. A curious little plant, said to thrive best in a strong rich loam, and may be increased by offsets. It must not be watered in winter.

péndula . .	. Yel. grn.	. 6, G. Bl. P.	½ Peru	. .
-------------	-------------	----------------	--------	-----

URCEOLUS, the filaments joined into a pitcher-shaped body constitute the urceolus of the stamens, or the name may be applied to any part of a similar form.

URÈDO, *Persoon*. From *uro*, to scorch; applied to those plants called mildew or blight. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. The species of this obscure genus are found on the leaves of different plants. *Synonyme*: 1, *Acidium Cædri*—æcidiiiformis, *Alchemilla*, *anthyllidis*, *appendiculosa*, *Armérie*, *Betæ*, *bifrons*, *Campanula*, *candida*, *Caryophyllacearum*, *Cerastii*, *Cichoracearum*, *confluens*, *crustacea*, *effusa*, *Epilobii*, *Equiseti*, *Fabæ*, *farinosa*, *Ficariæ*, *Geranii*, *gyrosa*, *Helioscopiæ*, *Heraclei*, *Hypericorum*, *intrusa*, *Iridis*, *Labiatarum*, *linearis*, *Lini*, *oblongata*, *olivacea*, *ovata*, *parallèla*, *Petasites*, *Polygonorum*, *Populina*, *Potentillæ*, *Poterii*, *Primulæ*, *pustulata*, *Pyrulæ*, *Quercus*, *Rhinanthearum*, *Rosæ*, *Ruborum*, *Rumicium*, *Salicis*, *Saxifragarum*, *Scillarum*, *Senecionis*, *Sonchi*, *suaveolens* 1, *Tussilaginis*, *Umbellatarum*, *utriculosum*, *Vacciniorum*, *Vincæ*, *vitellinæ*.

URENA, *Linn.* From *uren*, its name in Malabar.

Linn. 16, Or. 8, Nat. Or. *Malvaceæ*. Uninteresting stove under-shrubs and annuals, growing in peat and loam; cuttings and seeds. *Synonymes*: 1, *U. lobata*; 2, *U. americana*—heterophylla, lobata, multifida, muricata, repanda, reticulata, scabriuscula 1, Siebéri, sinuata, speciosa, subtriloba, Swartzii 2, tricuspis. See *Pavonia*.

URGINEA. See *Scilla*.

URINARIA. See *Phyllanthus Urinaria*.

UROPELATON, *Ker*. From *oura*, a tail, and *petalon*, a petal; the divisions of the flower are lengthened out. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Interesting plants, succeeding best in a mixture of loam and leaf mould; they are increased by offsets or seeds. They should not be watered in winter. *Synonyme*: 1, *Scilla serotina*.

crispum . .	. Green	. 7, G. Bl. P.	½ C. G. H.	. 1816

URSINA. See *Sphenogyne*.

URTICA, *Linn.* From *uro*, to burn; in reference to the stinging properties of most of the species. *Linn.* 21, Or. 4, Nat. Or. *Urticaceæ*. Plants of little beauty, and of the easiest culture. They all succeed in any common garden soil; and are increased by cuttings, divisions, and seeds. The effects of the venomous sting of the common Nettle are well known, but are, however, not to be compared with those of some of the Indian species, grown in the gardens of this country; yet all the known species are far surpassed for virulence by one, which in Timor is called *daum setan*, or devil's leaf, the effects of which are said by the natives in

many cases to cause death. See *Bæhmèria* and *Conocéphalus*.

æstuans, *angustifolia*, *arboræscens*, *ardens*, *baccifera*, *baleàrica*, *canadensis*, *capitellata*, *caracasana*, *caravellana*, *chamaedryoides*, *ciliata*, *convèxa*, *crassifolia*, *depressa*, *diffusa*, *dioica*, *diversifolia*, *Dodartii*, *elongata*, *gracilis*, *grandifolia*, *horrída*, *involucrâta*, *macrostachya*, *membranacea*, *nivea*, *nudicaulis*, *nummularifolia*, *Parietaria*, *pentandra*, *pilulifera*, *puchella*, *pumila*, *reticulata*, *rufa*, *rugosa*, *scabrèlla*, *urens*.

URTICACEÆ, or NETTLE-WORTS. An order of herbs, shrubs, and trees. Nettles are well known as possessing excessive causticity in their juice; the stinging species of this country are, however, not to be compared with some of the East Indian species, as *U. crenulata*, *stimulans*, and *urentissima* (or devil's-leaf, as it is called), when the pain occasioned is so acute and violent as to produce the most dangerous effects.

URUCURANA. See *Bixa Urucurana*.

URVILLEA, *Kunth*. In honour of Captain Dumont D'Urville, of the French navy, who was sent out to ascertain the fate of La Peyrouse; an acute botanist. *Linn.* 8, Or. 1, Nat. Or. *Sapindaceæ*. Plants of little beauty. They may be grown in a mixture of loam and peat, and moderate-sized cuttings will root readily in sand, under a glass, in heat.

ferruginea	. . . White	. 6, S. Ev. Cl.	20	Brazil 1823
ulmacea	. . . White	. 6, S. Ev. Cl.	20	S. Ame. 1824

USNEA, *Dillenius*. From *ackneh*, a name applied to lichens in general by the Arabian physicians. *Linn.* 24, Or. 8, Nat. Or. *Par-*

melicæ. Found in winter, on old trees—*barbata*, *articulata*, *florida*, *plicata*, *hirta*.

USTILAGO, *Link*. From *ustus*, scorched; appearance. *Linn.* 24, Or. 9, Nat. Or. *Uredinæcæ*. Found upon grasses, &c.—*antherarum*, *caries*, *flosculosa*, *segetum*, *Urceolarum*.

USTULATE, blackened.

ÛTAN. See *Corypha Ûtan*.

UTERUS, the womb.

UTRICLE, a little bladder.

UTRICULAR, composed of little bladders.

UTRICULARIA, *Linn*. From *utriculus*, a little bladder; applied to the small inflated appendages of the roots. *Linn.* 2, Or. 1, Nat. Or. *Lentibulariæcæ*. Elegant little plants, found in ponds and rivulets.

intermedia	. . . Yel.	5, H. Aq. P.	½	Brit., pools.
minor	. . . Yel.	7, H. Aq. P.	½	Brit., pools.
vulgaris	. . . Yel.	6, H. Aq. P.	½	Brit., pools.

ÛVA-CRISPA. See *Ribes Ûva-crispa*.

ÛVÀRIA, *Linn*. From *uva*, a cluster of grapes; resemblance in the fruit. *Linn.* 13, Or. 6, Nat. Or. *Anonæcæ*. Interesting plants, succeeding in a mixture of sandy loam and peat, and increased by cuttings of the ripened wood, in sand, under a glass, in heat.

V.

VACCÀRIA. See *Saponària*.

VACCINIUM, *Linn*. An ancient Latin name, whether of a berry or a flower is not satisfactorily known. *Linn.* 8, Or. 1, Nat. Or. *Vacciniæcæ*. All the species of this genus are well worth cultivating, some of them for the sake of their fruit, some for curiosity, and others for ornament. The different kinds of *Whortleberry* and *Bilberry* succeed best in peat soil, or very sandy loam. Some of them grow best in moist situations, and others in dry. Those requiring the heat of the stove must receive the same treatment as the generality of stove plants; and are readily increased by cuttings, planted in sand, under a glass, in heat; they may, also, like the hardy species, be raised from root-suckers, creeping roots, trailing root-

ing stems, or from seeds treated as follows:—In autumn, as soon as the seeds are ripe, they should be sown in shallow pans, filled with very sandy peat soil, and covered slightly over; when about an inch high, they must be pricked out thinly into other pans, filled with the same kind of soil. After being well rooted in these pans, they must be planted out in spring in proper places, taking care to keep a ball of earth about the roots. If finally planted out in autumn, the worms are apt to throw them out of the ground during winter. *Synonyms*: 1, *V. myrtilloides*; 2, *V. diffusum*; 3, *V. brachycærum*; 4, *V. album*, *amœnum*, *disomorphum*; 5, *V. virgatum angustifolium*; 6, *V. fuscatum*, *formosum*; 7, *V. virgatum*; 8, *V. hirtellum*, *frondosum*; 9, *V. glaucum*; 10,

V. venustum; 11, *V. maderense*; 12, *V. tenellum*; 13, *V. parviflorum*; 14, *V. album*, *elevatum*; 15, *V. prunifolium*. See *Oxyccoccus* and *Gaylussacia*.

VACCINIACEÆ, or CRANBERRIES. A small order of shrubs and trees; some producing very handsome flowers, and others bearing fruit. They are all deserving of cultivation.

VAILLANTIA, De Candolle. In honour of Sebastian Vaillant, an eminent French botanist and author in the early part of the last century. *Linn.* 23, Or. 1, Nat. Or. *Stellatæ*, or *Galiaceæ*. Plants of little interest, growing in common soil, on rock-work, old walls, or in any dry situation; division and seeds. *Synonymes*: 1, *Galium articulatum*; 2, *G. cruciata*; 3, *G. Bauhimi*; 4, *G. pedemontium*; 5, *V. glabra*, *Galium verum*. See *Galium*.

VALERIANDI. See *Samolus Valerandi*.

VALERIAN GREEK. See *Polemonium*.

VALERIAN. See *Valeriana*.

VALERIANA, Necker. Said by some to be named after Valerius, who first used it in medicine; others assert that it is derived from *valere*, to be in health, on account of the medicinal qualities of *V. officinalis*. *Linn.* 3, Or. 1, Nat. Or. *Valerianaceæ*. Most of the species are very ornamental in flower-borders. The perfectly hardy kinds succeed well in common garden soil; those from warmer climates should be grown in pots in a mixture of loam, sand, and peat, and placed in a frame or greenhouse in winter. They are all readily increased by division at the root. The root of *V. officinalis* is eminently anti-spasmodic. It is very frequently prescribed with success in hysterical cases. In habitual costiveness it is an excellent medicine. The unpleasant flavour of *Valerian* is best counteracted by a small addition of mace. *Synonymes*: 1, *V. heterophylla*; 2, *V. Cardamines*. See *Patrinia*.

VALERIANACEÆ, or VALERIAN-WORTS. These are annual or perennial herbs, principally natives of temperate climates. The roots of *Valerian* are well known in medicine, and the Spikenard of the ancients (*Nardostachys Jata-mansi*) is much esteemed in India both for its fragrance and for its medical properties.

VALERIANELLA, Moench. From a diminutive of *Valeriana*, which see. *Linn.* 3, Or. 1, Nat. Or. *Valerianaceæ*. The species only require to be sown in early spring, in the open border. They answer well for a spring salad, and are generally known by the name of *Lamb's-lettuce*. *Synonymes*: 1, *V. dasycarpa*, *dentata*; 2, *V. tridentata*.

VALLARIS, *Brown*. From *vallo*, to inclose; used for fences in Java. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. This species grows well in sandy loam and peat, and is increased by cuttings, in sand, under a glass, in heat. *Synonymy*: 1, *Pergularia glabra*.
pergularia 1 . White . 6, S. Ev. Tw. 10 E. Ind. 1818

VALLÉSIA, *Ruiz and Pavon*. In honour of F. Vallesio, physician to Philip II. of Spain. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. For culture and propagation, see *Vallaris*.
cymbifolia . White . 6, S. Ev. S. 3 N. Spain . 1821
dichotoma . White . 5, S. Ev. S. 3 Peru . 1822

VALLEY OF DEATH TREE. See *Antiaris toxicaria*.

VALLISNERIA, *Micheli*. In honour of Antonio Vallisneri, an Italian botanist. *Linn.* 22, Or. 2, Nat. Or. *Hydrocharidaceæ*. This aquatic plant requires to be grown in a large pot or tub of water, in the conservatory or greenhouse; it should be planted deeply in the water, since it grows at the bottom of ditches in its native country.
spiralis . . Brown . 7, G. Aq. P. floa. S. Eur. 1818

VALLISNERIACEÆ. See *Hydrocharidaceæ*.

VALLÖTA, *Herbert*. In honour of Pierre Vallot, a French botanist. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. For culture and propagation, see *Amaryllis*. *Synonymy*: 1, *Amaryllis purpurea*.

VALORADIA, *Hochst*. Origin of name unknown. *Linn.* 5, Or. 1, Nat. Or. *Plumbaginaceæ*. The only species introduced is suitable for bedding out in the flower-garden in summer, requiring only the most common treatment, and easily increased by division of the roots. *Synonymy*: 1, *Plumbago Larpentæ*, *Ceratostigma plumbaginoides*.
plumbaginoides 1. Blue 6, F. Her. P. ½ China . 1845

VALVÆFORM, shaped as a valve.
VALVATE, opening like a valve.
VALVES, the divisions of the capsule.
VALVULAR, consisting of valves.
VALVULAR-DISSEPIMENTS, partitions in the centre of the valves.

VÁNDA, *R. Brown*. *Vanda* is the Sanscrit name of the original species of this genus. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus, as well as those elegant and interesting plants referred to it for culture, &c., are all well deserving of the cultivator's best care and attention. The beauty of their deliciously-fragrant flowers is quite sufficient to recommend them to all lovers of orchidaceous plants, besides their being in general such admirably free flowerers. Some of the species of *Saccolabium* and *Sarcanthus* produce from thirty to one hundred spikes of flowers each; indeed, we know from the best authority, that

there are single plants of *Saccolabium guttatum*, growing upon trees in the Botanic Garden, Calcutta, which produce every year from fifty to one hundred spikes of flowers. In their native districts, all, or the greater part of the plants referred to this genus, grow upon trees in dense forests, and consequently derive their chief support from the atmosphere; therefore their cultivation in this country is rendered very simple and easy, as the greater part of them require nothing more than a piece of wood to attach themselves to, or an ornamental wire basket filled with moss and broken pots, and suspended from the pillars or roof of the house. There are, however, exceptions to this rule; as, for instance, some of the stronger and more robust-growing kinds, such as *Vanda Roxburghii* and *V. multiflora*, which should be grown in wide shallow pots, carefully filled with cut *sphagnum* moss, and potsherds broken small. We would recommend oak branches for those intended to be grown upon wood. They all require a good strong moist heat, and a plentiful supply of water during the growing season, which ought to commence about the beginning or middle of June, and continue to the end of September, from which time they should be kept cool and dry until the beginning of March, when they should be placed in a strong dry heat to induce them to flower. They will, if thus treated, flower most abundantly; whereas, if kept in a continued moist atmosphere, they will do nothing but grow from year to year, and of course never produce flowers, because they are not allowed a proper season to elaborate and perfect their flower-buds, neither have they a proper season for the development of those buds. Propagation is effected by carefully detaching the lateral shoots after they have grown to the length of about six inches, and fastening them to another block of wood in a similar manner to the old ones; but great caution is necessary to preserve them from excision by moisture till they have recovered from the effects of being severed from the parent plant, and commenced growing. *Synonymy*: 1, *V. lissochiloides*, *Piëldia lissochiloides*; 2, *V. Roxburghii unicolor*, *Angræcum farrum*, *Epidendrum farrum*, *Cymbidium farrum*; 3, *Cymbidium tessellatum*; 4, *Trichoriza teretifolia*; 5, *V. suavisolens*; 6, *Saccolabium giganteum*; 7, *Epidendrum spatulatum*, *Limodorum spatulatum*, *Ærides maculatum*; 8, *Saccolabium papillosum*, *Thalia maravara*, *Cymbidium præmorsum*, *Ærides præmorsum*, *E. undulatum*. See *Sarcanthus* and *Ærides*.

VANILLA, *Plumier.* An alteration of *Vaynilla*, which is a diminutive of *Vaina*, a Spanish word signifying a sheath; in reference to the cylindrical pod being like the sheath of a knife. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These plants thrive best in a mixture of moss and turfy peat, in a moist warm atmosphere. They should have the rough bark of a piece of wood, or a wall for their long roots, which issue from every joint, to cling to; and they are readily increased by cuttings. The fruit is one of the most delightful aromatics known, and is extensively used in the manufacture of liqueurs, chocolate, and various articles of confectionary, and also for perfuming snuffs.

VELLEJA, *Smith.* In honour of Major Velley, a gentleman who paid much attention to marine Algae. *Linn.* 5, Or. 1, Nat. Or. *Goodeoidaceæ*. Interesting plants, succeeding best in a mixture of loam, peat, and sand, and increased by division, or by seeds, which are sometimes produced in this country. The plants must be sparingly watered in winter.

spatulata . . .	Yel. 4, G. Her. P. 1½	N. Holl. . .	1825

VELLOZIA. Derivation unknown. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. These plants are like perennial lilies, having trunks several feet in height, and covered with the dead remains of leaves, like those of *Yucca* and *Dracæna*, to which genera refer for cultivation.

lanceolata . . .	Yellow 6, G. Her. P. 2	Swan River . . .	1841
------------------	------------------------	------------------	------

VELONIA. See *Quercus Egilops*.

VELTHEMIA, *Gleditsch.* In honour of F. A. Veltheim, a German botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. The species of *Veltheimia* thrive best in a light loamy soil; and are

readily increased by offsets from the bulbs; the leaves pulled off close to the bulb, and planted in pots of soil, will produce bulbs at their base.

VENUS'S FLYTRAP. See *Dionæa muscipula*.

VENUS'S HAIR. See *Adiantum Capillus-Veneris*.

VENUS'S LOOKING-GLASS. See *Specularia perfoliata*.

VENUS'S NAVELWORT. See *Omphalodes*.

VÉRIS, *Commelin*. From *veres*, a briar or bramble. *Linn.* 21, Or. 8, Nat. Or. *Rutaceæ*. For culture and propagation, see *Toddalia*.

Synonymy: 1, *Toddalia paniculata*.

lanceolata. White 5, S. Ev. S. 4 Mauritius. 1824

obovata. White 5, S. Ev. S. 4 Mauritius. 1824

VERATRA. See *Veratrum*.

VERATRUM, *Linn.* From *vere*, truly, and *ater*, black; in allusion to the colour of the root.

Linn. 23, Or. 1, Nat. Or. *Melanthaceæ*. A genus of elegant plants when in flower. They thrive best in a rich soil, and are increased by division or seeds. The dangerous medicinal properties of the root of *Veratrum* are owing to a peculiar alkaline principle, called *Veratrin*, which acts with singular energy on the membrane of the nose, exciting violent sneezings, though taken in very minute quantity. When taken internally in very small doses, it produces excessive irritation of the mucous coat of the stomach and intestines, and a few grains are found fatal to the lower animals.

V. viride is an acrid, emetic, and powerful stimulant, followed by sedative effects. See *Chamaecristum*, *Leimanthium*, and *Stenanthium*.

VERBASCUM, *Linn.* Said to be from *barbasicum*, bearded; in allusion to the bearded filaments.

Linn. 5, Or. 1, Nat. Or. *Scrophulariaceæ*. The species of *Verbascum* are strong, robust

growing plants, producing an abundance of showy, yellow flowers, and on that account they are well adapted for planting at the back of flower borders, or in shrubberies. They grow freely in any soil, and are readily increased by seeds; some of the perennial kinds by divisions of the root. *Synonymy*: 1, *V. ferrugineum*. See *Ramondia*.

VERBENA, *Linn.* Said to be from its Celtic name, *Ferfaen*. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceae*. This is a genus of extremely beautiful and ornamental plants when in flower, either when grown in pots in the greenhouse, or when planted out in the flower-garden; and they will all succeed well in the open ground during the summer months. The flowers of *V. teucrioides* have a delightful jasmine-like odour. They all succeed well in a light loamy soil, with careful drainage when kept in pots. The herbaceous perennial kinds increase rapidly by cuttings, planted in sand, under a glass; the greenhouse kinds in a little heat. The annuals and biennials should be raised on a gentle hotbed. *Synonymes*: 1, *V. Melindres*; 2, *V. Drummondii*; 3, *V. erinoides*. See *Aloysia*, *Priva*, and *Zapana*.

VERMICULAR, having the appearance of a worm.

VERMICULARIA, *Tode*. From *vermiculus*, a little worm; the arrangement of the seeds. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Found upon dead ivy leaves—*trichella*.

VERMIFUGE, that which expels worms.

VERNACULAR, native.

VERNAL, spring.

VERONIA, *Schreber*. In honour of William Vernon, a botanical traveller in North America. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. The stove and greenhouse species thrive well in a light rich soil, and are readily increased by seeds and young cuttings. The hardy herbaceous kinds are fine stately plants, well adapted for the back of flower borders, and are increased by division. *Synonymes*: 1, *Conyza anthelmintica*.

VERÓNICA, *Linn.* The derivation of the word is not known. *Linn.* 2, Or. 1, Nat. Or. *Scrophulariaceæ*. The hardy herbaceous species of this extensive genus are admirably adapted for ornamenting the flower-borders, on account of their pleasing habit and beautiful flowers. They are all of the easiest culture, and are readily increased by division at the root. The greenhouse shrubby kinds are readily increased by cuttings. The annual species are hardly

worth cultivating, except in botanical collections; the seeds of them merely require to be sown in the open ground. *Synonymes*: 1, *V. polymorpha*; 2, *V. lamifolia*; 3, *V. pálchra*; 4, *V. incarnáta*; 5, *V. gentianoides*; 6, *V. Barrelieri*; 7, *V. angustifolia*; 8, *V. acuta*, *ambigua*, *rigens*; 9, *V. gróssa*; 10, *V. fulcáta*; 11, *V. corymbósa*; 12, *V. hírsuta*; 13, *V. amethístina*; 14, *V. Hósti*; 15, *V. pilocárpa*; 16, *V. circæoides*; 17, *V. salicifolia*; 18, *V. elliptica*. See *Leptándra*.

- VIBÛRGIA**, *Ortega*. In honour of Eric Viborg, a Danish botanist. *Linn.* 16, Or. 6, Nat. Or. *Fabacææ*. Pretty plants. For culture, &c., see *Loddigesia*. *Synonymes*: 1, *Crotalaria floribunda*, *obcordata*.
- obcordata*, 1 . Yellow 7, G. Ev. S. 3 C. G. H. 1810
sericea . Yellow 7, G. Ev. S. 3 C. G. H. 1810
- VIBRISSEA**, *Fries*. From *vibro*, to vibrate. *Linn.* 24, Or. 9, Nat. Or. *Helvellæceæ*. This species is found on the branches and trunks of trees lying in water—*truncorum*.
- VIBURNUM**, *Linn.* Said to be from *vicio*, to tie; because of the pliability of some of the branches. *Linn.* 5, Or. 3, Nat. Or. *Caprifoliæceæ*. The species of *Viburnum* are all very elegant, rather early-flowering shrubs. The hardy kinds are well fitted for planting in ornamental shrubberies. They are increased by layers, or by cuttings, planted under a glass, in a shady situation. The fruit becomes eatable after fermentation, and is made into a sort of cake by the North American Indians. *Synonymes*: 1, *V. squamatum*; 2, *V. Opulus roseum*; 3, *V. lucidum*; 4, *V. strictum virgatum*; 5, *V. strictum*.

VICIA, Tournefort. From *vincio*, to bind together; because the species have tendrils by which they bind other plants. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Some of the species of this genus are well worth cultivating in the flower border for the beauty of their flowers. They are of the easiest culture in any common garden soil. The perennial kinds may be readily increased by dividing the root or by seeds. The seeds of the annual kinds only require to be sown in the open border in spring. *V. sativa* and its varieties are extensively cultivated, and well known by the common name of vetch, or tares; they are used as food for all kinds of cattle, and are allowed to be more nutritive and profitable than hay or any other herbage. *Synonymes*: 1, *V. lukanensis*; 2, *V. sordida*; 3, *Lathyrus Bithynicus*; 4, *V. monantha*; 5, *V. Cracca*; 6, *V. parviflora*; 7, *Ervum soloniense*; 8, *V. alba*; 9, *V. atropurpurea*; 10, *V. tenuifolia*; 11, *V. laxiflora*, *Ervum tenuissimum*. See *Ervum, Fabæ, and Lathyrus*.

VICIA. See *Franciaëria*.

VICTORIA, Lindley. Named in honour of her Majesty Queen Victoria. *Linn.* 13, Or. 1, Nat. Or. *Nymphaeaceæ*. *V. regina*, a magnificent stove aquatic, is now in several collections in this country; its large spreading leaves and immense flowers will cover a great surface; in other respects it may be treated exactly in the same manner as the stove species of *Nymphaea*. *Synonyme*: 1, *V. regina*, *V. cruziana*, *Nymphaea Victoria*, *Eurjale amazônica*; 2, *N. gigantea*. See *Nymphaea*.

VILLÆRSIA, Ventenat. Named in honour of D. Villars, a famous French botanist. *Linn.* 5, Or. 1, Nat. Or. *Gentianaceæ*. A genus of very elegant plants when in blossom. The stove and greenhouse aquatic species should be grown in tubs or cisterns of water. The hardy kinds succeed well in a pond. The marshy kinds, as *V. geminata*, require to be grown in pots, in a mixture of peat and sand, and the pots to be placed in water. They are all readily increased by divisions, or by seed. *Synonymes*: 1, *Menyanthes indica*; 2, *V. cordata*; 3, *M. nymphaeoides*.

VINE LEEK. See *Allium ampeloprasum*.

VIOLA, Linn. Latin name of the flowers. *Linn.*

5, Or. 1, Nat. Or. *Violaceæ*. All the species of this genus deserve to be cultivated, either for the beauty or the scent of their flowers. The hardy perennial kinds are well fitted for ornamenting the front of flower-borders or rock-work, but the smaller species succeed best when grown in pots, in a mixture of loam, peat, and sand. The species, natives of America, thrive best in vegetable mould or peat, and are readily increased by parting the roots, or by seeds. The greenhouse and stove species should be grown in a mixture of loam and peat; the herbaceous kinds of them are increased by seed, or dividing the roots, and the shrubby kinds by cuttings, which root readily when planted under a glass. The annual species may be sown in the open borders or on rock-work. The Neapolitan violet, *V. odorata pallido-plena*, may be made to flower throughout the winter and early spring, by placing it in a stove or warm pit. *V. canina* is said to be a famous agent in removing cutaneous diseases. *Synonymes*: 1, *V. sororia*; 2, *V. Pallasi*, *chrysantha*; 3, *V. Allioni*; 4, *V. lanceolata*; 5, *V. Patrini*, *nepalensis*, *primulefolia*; 6, *V. multifida*; 7, *V. dentata*; 8, *V. sibirica*; 9, *V. odorata*; 10, *V. stagnina*; 11, *V. Hornemanniana*; 12, *V. primulefolia*; 13, *V. prunellefolia*; 14, *V. digitata*; 15, *V. ranunculifolia*; 16, *V. ericetorum*; 17, *V. lanceifolia*; 18, *V. litoralis*; 19, *V. Broussonetiana*; 20, *V. saxatilis*; 21, *V. arvensis*; 22, *V. Kitaibeliana*; 23, *V. calcarata*; 24, *V. maculata*, *pyrolæfolia*.

VIOLACEAE, or **VIOLET-WORTS**, are herbaceous plants and small shrubs; the common Violet gives the true character of the order.

VIOLACEOUS, violet-coloured.

VIOL. See *Viola*.

VIOL. THLASPI. See *Chlydola* *Ion Thlaspi*.

VIORNA. See *Clématis* *Viorna*.

VIPER'S BUGLOSS. See *Echium*.

VIPER'S GRASS. See *Scorzonera*.

VIRENS, green, flourishing.

VIRESCENT, greenish.

VIREYA. See *Rhododendron*.

VIRGAUREA. See *Solidago* *Virgaurea*.

VIRGILIA. Lamarck dedicated this genus to the poet Virgil, whose Georgics contain many things interesting to botanists. *Linn.* 10, Or. 1, Nat. Or. *Fabaceae*. The greenhouse species are very elegant when in blossom; they succeed well in a mixture of loam, peat, and sand, and are increased by young cuttings in sand under a glass. *V. lutea* is an elegant hardy tree, well suited for shrubberies or pleasure grounds. It is commonly propagated by laying down the shoots in autumn or spring. *Synonymes*: 1, *Robinia capensis*; 2, *Sophora sylvestris*. See *Galardria*.

VIRGINIAN CREEPER. See *Ampelopsis* *hederacea*.

VIRGINIAN HEMP. See *Acrida*.

VIRGINIAN POKE. See *Phytolacca* *decandra*.

VIRGIN'S BOWER. See *Clématis* *Vitiella*.

VIRILIS, stout, strong, vigorous.

VIROLA. See *Myristica*.

VIROUSUS, rank, poisonous.

VISCARIA, *Rochler*. From *viscus*, birdlime; in

allusion to the glutinous stems of the species.

Linn. 10, Or. 5, Nat. Or. *Caryophyllaceae*.

For culture and propagation, see *Léchnis*.

Synonymes: 1, *Viscaria alpina*; 2, *Lýchnis Viscaria albiflora*; 3, *Agrostemma subcica*.

VISCOSUS, clammy, like birdlime.

VISCUM, *Tournefort*. From *viscus*, birdlime; on account of the sticky nature of the berries. *Linn.* 22, Or. 4, Nat. Or. *Loranthaceæ*. The Mistletoe is a well-known parasite, readily propagated by sticking the berries on thorn or apple-trees, after a little of the outer bark has been cut off, and tying a shade or mat over them, to protect them from the birds. Its branches are much sought after at Christmas to hang up in houses along with other evergreens. Album . . . Green 5, H. Parasite 2 England, trees.

VISMIA, *Vandelli*. In honour of M. de Visme, a Lisbon merchant. *Linn.* 18, Or. 4, Nat. Or. *Hypericaceæ*. These plants succeed well in a mixture of loam and peat, and are increased by young cuttings, planted in sand, under a glass, in heat. *Synonyme*: 1, *Hypericum guianense*.

VITICELLA. See *Clématis Viticella*.

VITIS, *Linn.* From the Celtic *gwid*, signifying the best of trees. Wine is derived from the Celtic word *gwin*. *Linn.* 5, Or. 1, Nat. Or. *Vitaceæ*. A very valuable genus of plants. *V. vinifera*, or common grape-vine, with its very numerous garden varieties, is in general cultivation for its much esteemed fruit. It must be grown in a strong, very rich soil, to have it in perfection. It is readily increased by cuttings or layers. None of the other species are worth cultivating for their fruit. The acid of grapes is chiefly tartaric; malic acid, however, exists in them. *Synonymes*: 1, *V. vulpina*; 2, *V. indica*; 3, *V. æstivalis sinuata*; 4, *V. laciniosa*.

WIDOW-WAIL. See *Cnedrum*.

WIGANDIA. Named by Kunth in honour of John Wigand, a bishop of Pomerania. *Linn.* 5, Or. 2, Nat. Or. *Hydroleaceæ*. If well grown, and formed into a bush, feathered to the surface of the ground, *W. caracasana* must have a very beautiful appearance with its large clusters of delicate lilac flowers, which continue to open in succession for a long time. But if formed into a sort of stake, with a few leaves and flowers at the top, as is too frequently the case with stove plants, it will be found to possess few claims to attractiveness. For culture and propagation, see *Hydrolea*.

XANTHOXYLACEÆ OR *XANTHOXYLS*. Trees and shrubs, principally found in tropical America; they are all pungent and aromatic, and are popularly called peppers in their native countries.

XANTHOXYLUM, *Linn.* From *xanthos*, yellow, and *xylon*, wood; the roots are yellow. *Linn.* 22, Or. 5, Nat. Or. *Xanthoxylaceæ*. Ornamental trees and shrubs. The hardy species, from their beauty, are well adapted for planting in shrubberies. They grow freely in any common garden soil, and are readily increased by cuttings of the ripened wood, planted under a glass. The stove and greenhouse kinds are of easy culture, and are increased by cuttings, in sand, under a glass. The bark and capsules

of *X. fraxineum* have a hot, acrid taste, and are used for easing the toothache; hence the name *Toothache tree*. *X. Avicennæ* and *Piperitum* are used in China and Japan as an antidote against all poisons, and in Japan the capsules of the latter species are used as a substitute for pepper. *Synonymes*: 1, *Fagara Budrunga*; 2, *F. Piperita*; 3, *F. Pterota*; 4, *Sapindus spinosus*; 5, *Evodia triphylla*; 6, *F. tragodes*. See *Fagara*.

XEROPHYLLUM, *Michaux*. From *xeros*, dry, and *phyllon*, a leaf; in reference to the dry grassy leaves. *Linn.* 6, Or. 3, Nat. Or. *Melanthaceæ*. Handsome plants when in flower, and, therefore, well worth cultivating. They succeed best in a peat border, and will, if treated with care, ripen their seeds, from which they may be increased, as also by dividing the roots. *Synonymes*: 1, *X. setifolium*, *Helónias asphodeloides*; 2, *H. graminea*; 3, *Veratrum Sabadilla*, *Vellozia squamata*; 4, *Helónias tenax*.

XIMENIA, *Linn.* In honour of Francis Ximenes, a Spanish monk, who wrote a work upon medicinal plants. *Linn.* 8, Or. 1, Nat. Or. *Olacææ*. A mixture of loam and peat suits these plants, and cuttings root readily in sand, under a glass, in heat. The drupes of *X. americana* have a sweet, aromatic taste, but are a little rough to the palate. They are eaten in Senegal; the flowers are very sweet. *Synonymes*: 1, *Gela lanceolata*, *Selas lanceolata*; 2, *Gela oblongifolia*.

XYLARIA, *Hill*. From *xylon*, wood, in allusion to the situations in which they grow. This genus was formerly included in *Sphæria*. *Linn.* 24, Or. 9, Nat. Or. *Helvellææ*—*alutacea*, *capitata*, *digitata*, *gracilis*, *hypærylon*, *cupressiformis*, *polymorpha*, *punctata*.

XYLOBIUM. See *Maxillaria*.

XYLOMA, *Pers.* From *xylon*, wood, and *loma*, a fringe, or margin. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiææ*. Small fungi growing on living trees,—*acerinum*, *conœvum*, *Geranii*, *fagineum*, *populinum*, *pezizoidium*, *salicinum*, *salignum*.

XYLOMELUM, *Smith*. From *xylon*, wood, and

melon, an apple; appearance of the fruit of the plant. *Linn.* 4, Or. 1, Nat. Or. *Proteacææ*. For culture and propagation, see *Hakea*. *Synonyme*: 1, *Hakea pyriformis*.

pyriforme 1 . White 5, G. Ev. T. 14 N. S. W. . 1789

XYLOPHYLLA, *Linn.* From *xylon*, wood, and *phyllon*, a leaf; rigidity of the leaves. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiææ*. Ornamental shrubs, growing about three feet high. For culture and propagation, see *Phyllanthus*. *Synonymes*: 1, *Phyllanthus angustifolius*, *epiphyllanthus*; 2, *P. falcatus*; 3, *P. latifolius*; 4, *P. linearis*; 5, *P. ceramicus*; 6, *P. arbascula*.

XYLOPIRON, *Linn.* Abridged from *xylopicon*, which is from *xylon*, wood, and *picon*, bitter; the wood of some of the species is extremely bitter. *Linn.* 13, Or. 6, Nat. Or. *Anonææ*. Ornamental plants; for culture and propagation, see *Phyllanthus*. The wood of *X. glabra* is so intensely bitter, that a quantity of sugar sent from Jamaica in hogsheds made from it, was so bitter that purchasers could not be found. A decoction of the wood is said to be of service in colic, and to be used for the purpose of creating an appetite.

ZIGZAG, a stem is zigzag when it bends from side to side.

ZILLA, *Forskahl*. The name of an Egyptian plant. *Linn.* 15, Nat. Or. *Brassicæ*. Interesting plants, growing best in a light rich soil, and readily increased by cuttings.

macrocarpa . Pa. lil. 4, F. Ev. S. 1½ Egypt. . 1820
Myagroides . Lilac . 4, F. Ev. S. 2 Egypt. . 1822

ZINGIBER, *Gærtner*. The Indian name. *Linn.*

1, Or. 1, Nat. Or. *Zingiberæ*. The species of *Zingiber*, or ginger, succeed best when grown in a mixture of loam, peat, and sand, and they are readily increased by division of the roots. Ginger is the root of *Z. officinale*, and is much valued for the sake of its aromatic, stimulating properties.

ZINGIBERÆE or **GINGER-WORTS**. These are all tropical, or nearly so, and contain an aromatic principle which renders some of the species very valuable in medicine and for domestic purposes. Some bear very handsome flowers.

ZINNIA, *Linn.* In honour of John Godfrey Zinn, professor of botany at Gottingen. *Linn.* 19, Or. 2, Nat. Or. *Asteræ*. A genus of very pretty annuals, well deserving extensive cultivation. The seeds require to be raised upon a gentle hotbed in spring, and afterwards planted in warm sheltered situations of the flower-garden. *Synonymes*: 1, *Z. violacea*.

ZIT-SI. See *Melanorrhiza usitatissima*.

ZIZANIA, Linn. The Greek name of *darnel*. The modern plants have no relation to the ancient, being natives of America. *Linn.* 21, Or. 6, Nat. Or. *Graminaceæ*. *Z. aquatica* was cultivated for a time in Middlesex and Ross-shire; it grows on the margin of ponds, and is exceedingly prolific of bland, farinaceous seeds, which afford a very good meal. It abounds in all the shallow streams of North-West America, where its seeds contribute essentially to the support of the wandering tribes of Indians, and feed immense flocks of wild swans, geese, and other water-fowl. Pinkerton says, this plant seems intended by nature to become the bread-corn of the north.

ZIZIPHORA, Linn. Said to be from *zizi* of the Indians, and *phoreo*, to bear. *Linn.* 2, Or. 1, Nat. Or. *Lamiaceæ*. The species of this genus are very pretty, and the perennial kinds well suited for growing on rock-work, or in pots well drained, in light sandy soil; they are increased by seeds and cuttings. The seeds of the annual species should be sown in the open border in April. *Synonymes*: 1, *Z. serpyllacea*, *Thymus lucidus*; 2, *Z. media*, *Z. serpyllacea*; 3, *Z. Pouschkini*.

ZIZYPHUS, Tournefort. *Zizouf*, in Arabic, is the name of the *Lotus*. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. The species of *Zizyphus* are all very pretty, and deserve to be grown in every collection of plants. The stove and greenhouse species thrive well in loam, peat, and sand, and ripened cuttings root readily in sand, under a glass. The hardy kinds are well fitted for shrubberies, and are easily increased by ripened cuttings, planted in soil, with a glass over them, or by slips of the roots. The fruit of *Z. Jujuba* and *Lotus* is very excellent, and is partaken of by all classes of people, in the countries to which these species are indigenous. It is sweet and mealy. *Synonymes*: 1, *Rhamnus Jujuba*; 2, *R. Lotus*; 3, *Z. bubalina*; 4,

Z. sororia; 5, *Rhamnus Zizyphus*. See *Con-dalia*, and *Paliurus*.

ZOSTERA, Linn. From *zoster*, a riband; the leaves. *Linn.* 1, Or. 1, Nat. Or. *Zosteraceæ*. This pretty aquatic is found in ditches near the sea-shore.

marina . . . Apetal 8, H. Aq. P. 1 Brit. sea shore

ZOSTERACEÆ or SEA-WRACKS. A small order of plants resembling sea-weeds, and growing principally in the bottom of the ocean.

ZOZIMIA, Hoffman. In honour of A. N. and Z. Zozima, distinguished editors of the Greek classics. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A mere weed. *Synonyme*: 1, *Heracleum absinthifolium*—*absinthifolia* 1.

ZUCCAGNIA. See *Uropeltalon*.

ZUZYGNIUM. See *Calyptanthus Zuzygium*.

ZWINGERA. See *Sinaba*.

ZYGIA. See *Inga Zygia*.

ZYGIS. See *Thymus Zygis*.

ZYGNEMA, Agardh. From *zygos*, a yoke, and *nema*, a filament; filaments jointed together in pairs. *Linn.* 24, Or. 7, Nat. Or. *Confervaceæ*.

The species of this genus are found in rivulets, ditches, &c.—*tricolor*, *cruciatum*, *c. brev-articulatum*, *c. longi-articulatum*, *curvatum*, *decimatum*, *decussatum*, *epigæum*, *nitidum*, *pectinatum*, *punctatum*, *quinatum*.

ZYGODON, *Hooker*. From *zygos*, a yoke, and *odous*, a tooth, the teeth are yoked together in pairs. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. A pale green species of moss, found on the trunks of trees. *Synonymy*: 1, *Mnium conoideum*—*conoideum* 1.

ZYGOGLOSSUM. See *Cirrhopetalum*.

ZYGOPÉTALUM, *Hooker*. From *zygos*, a yoke, and *petalon*, a petal; in allusion to the adhesion of the segments of the perianth by their bases in the original species. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a genus of extremely beautiful and fragrant plants when in flower. They are easily cultivated in a damp heat, and must in all respects be treated similarly to the genus *Stanhopea*. *Synonymy*: 1, *Odontoglossum Bictonense*; 2, *Eulophia crinita*, *Z. pubescens*; 3, *Z. crinitum*, *Eulophia crinita*, *Z. pubescens*; 4, *Z. velutinum*, *Eulophia Mackayana*. See *Odontoglossum*.

ZYGOPHYLLACEÆ, or **BEAN CAPERS**. This order consists of trees, shrubs, and herbaceous plants. The ligneous species furnish exceedingly hard wood, and in the *Guaiaecum* is both bitter and acrid.

ZYGOPHYLLUM, *Linn.* From *zygos*, a yoke, and *phyllon*, a leaf; the leaves are in pairs. *Linn.* 10, Or. 1, Nat. Or. *Zygophyllaceæ*. The species of this genus are all very handsome when in flower. The stove and greenhouse species should be grown in a mixture of loam, peat, and sand, and are readily increased by cuttings, in sand, under a glass, or by seeds, when these can be obtained. *Z. Fabago* grows well in any light soil, in a dry situation; it can only be increased by seeds, which should be sown in a pot, and placed in a frame, and when the plants are large enough, they may be planted out in the open border, in a warm, dry, sheltered situation. See *Guaiacum* and *Fabago*.

ZYGOTRÍCHIA, *Brid.* From *zygos*, a pair, and *thrix*, hair. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. Mosses growing on wet sandy banks—*cylin-drica*.

SUPPLEMENT.

The lapse of time consequent on the passage through the press of a work of this description and extent, has necessarily caused the omission of many plants that have been discovered or described since its commencement; these are now inserted in alphabetical order. The new Genera upon which no remarks are supplied have either not come under the Editor's observation, or are too little known for him to venture to speak of them with confidence.
